Normality and Pathology in Childhood Anna Freud, 1966 *Reading Anna Freud* Nick Midgley, 2013 Reading Anna Freud provides an accessible introduction to the writings of one of the most significant figures in the history of psychoanalysis

Reading Freud Jean-Michel Quinodoz, 2013-12-16 Winner of the 2010 Sigourney Award Reading Freud provides an accessible outline of the whole of Freud's work from *Studies in Hysteria* through to *An Outline of Psychoanalysis*. It succeeds in expressing even the most complex of Freud's theories in clear and simple language whilst avoiding oversimplification. Each chapter concentrates on an individual text and includes valuable background information relevant biographical and historical details, descriptions of Post Freudian developments and a chronology of Freud's concepts. By putting each text into the context of Freud's life and work as a whole, Jean-Michel Quinodoz manages to produce an overview which is chronological, correlative and interactive. Texts discussed include *The Interpretation of Dreams*, *The Uncanny*, *Civilisation and its Discontents*. The clear presentation with regular summaries of the ideas raised encourages the reader to fully engage with the texts presented and gain a thorough understanding of each text in the context of its background and impact on the development of psychoanalysis. Drawing on his extensive experience as a clinician and a teacher of psychoanalysis, Jean-Michel Quinodoz has produced a uniquely comprehensive presentation of Freud's work which will be of great value to anyone studying Freud and Psychoanalysis.

[Being Autistic is Not a Behavior Problem](#) Daniel B. LeGoff, 2023-04-15 Applied behavior analysis ABA has become a widely used form of therapy for autistic children without its theories and methods being well understood This critical analysis of the theories and research on which ABA bases its claim to being an evidence based treatment is a must read for everyone who has a stake in the lives of autistic individuals This book reviews the literature which shows that ABA is not based on scientific research and that practitioners of ABA are not required to be trained in child psychology pediatrics child development education family therapy language development or scientific research ABA is not based on any form of developmental science but primarily on the works of B F Skinner whose ideas were first published over seventy years ago This philosophical viewpoint radical behaviorism holds that individual experiences are irrelevant to behavior change because the determining factors of our

actions are in the environment the rewards and punishments that result from those actions This in depth analysis of the theories and research of ABA leads to the conclusion that ABA is not an applied science nor does it promote values consistent with current models of child development and education Other promising methods based on modern science including parent directed early infancy pre emptive strategies and peer based LEGO Clubs also discussed here are often overshadowed by the media coverage and marketing strategies of ABA based autism services despite these messages being overstated and misleading Simply put the public trust and investment in ABA services needs to be reviewed in greater detail and with greater skepticism The pseudoscientific concepts described by behavior analysts sound convincing to many but upon closer examination amount to little more than what most educators and parents typically do already and at the same time involve costly and invasive services with little or no evidence of meaningful benefit Some natural strategies such as peer mentoring and caregiver training do help autistic children and their families to adapt to mainstream settings the persistent promise of evidence based autism treatment has generated an expanding market for ABA services which actually interferes with typical social development Modern views of child development social and cultural adaptability play and education emphasize integration of individuals and their sociocultural environments Less costly proactive and non invasive approaches to improving social adaptability and quality of life for autistic children and their caregivers are currently available but unlike ABA based services they are not widely promoted in the public media or offered directly to families by thousands of newly certified providers A science based and holistic understanding of the life experiences of autistic individuals recognizes the importance of sociocultural adjustment and long term quality of life not behavioral compliance in adult controlled settings even when those settings are described as naturalistic Radical behaviorism was not and will never be compatible with developmental models which view development as a reciprocal and dynamic synergistic process not the outcome of a successful behavior plan It is important for those who care about diversity in society to promote the creative contributions of individuals with diverse life experiences and to stop thinking about being different as a behavior problem **Preventing**
