Normative Decision Making Sheen T. Kassouf, 1970 **Decision Making** David E. Bell, Howard Raiffa, Amos Tversky, 1988-10-28 A compilation of different approaches normative descriptive and prescriptive develops this integrated analysis of decision making that emphasizes the contributions of various disciplinary interests Normative Decision Making Sheen Kassouf, 1970 Decision Theory and Decision Behaviour A. Rapoport, 1998-01-27 The book treats two approaches to decision theory 1 the normative purporting to determine how a perfectly rational actor ought to choose among available alternatives 2 the descriptive based on observations of how people actually choose in real life and in laboratory experiments The mathematical tools used in the normative approach range from elementary algebra to matrix and differential equations Sections on different levels can be studied independently Special emphasis is made on offshoots of both theories to cognitive psychology theoretical biology and philosophy **Decision Theory and Decision Behaviour** Anatol Rapoport, 2013-03-14 This book presents the content of a year's course in decision processes for third and fourth year students given at the University of Toronto A principal theme of the book is the relationship between normative and descriptive decision theory The distinction between the two approaches is not clear to everyone yet it is of great importance Normative decision theory addresses itself to the question of how people ought to make decisions in various types of situations if they wish to be regarded or to regard themselves as rational Descriptive decision theory purports to describe how people actually make decisions in a variety of situations Normative decision theory is much more formalized than descriptive theory Especially in its advanced branches normative theory makes use of mathematical language mode of discourse and concepts For this reason the definitions of terms encountered in normative decision theory are precise and its deductions are rigorous Like the terms and assertions of other branches of mathematics those of mathematically formalized decision theory need not refer to anything in the real i e the observable world The terms and assertions can be interpreted in the context of models of real life situations but the verisimilitude of the models is not important They are meant to capture only the essentials of a decision situation which in real life may be obscured by complex details and ambiguities It is these details and ambiguities however that may be crucial in determining the outcomes of the decisions **Normative Decision Making** Howard Raiffa, 1965 Normative Models in Managerial Decision-making Lawrence A. Gordon, Danny Miller, Henry Mintzberg, Society of Industrial Accountants of Canada, 1975 **Group Dynamics for Teams** Daniel Levi, 2007 Thoroughly updated and revised the Second Edition of Group Dynamics for Teams provides a clear and concise overview of the basic psychological concepts of group dynamics with a focus on their application with teams in the workplace Grounded in psychology research but with a very practical focus on organizational behavior issues the book helps readers understand and participate in teams more effectively in day to day work **Decision-Making and the Information System** Maryse Salles, 2015-06-29 The purpose of this book is to question the relationships involved in decision making and the systems
