

Central Cord Syndrome

- **Characteristics:** Motor deficits (in the upper extremities compared to the lower extremities; sensory loss varies but is more pronounced in the upper extremities); bowel/bladder dysfunction is variable, or function may be completely preserved.
- **Cause:** Injury or edema of the central cord, usually of the cervical area.

Anterior Cord Syndrome

- **Characteristics:** Loss of pain, temperature, and motor function is noted below the level of the lesion; light touch, position, and vibration sensation remain intact.
- **Cause:** The syndrome may be caused by acute disk herniation or hyperflexion injuries associated with fracture-dislocation of vertebra. It also may occur as a result of injury to the anterior spinal artery, which supplies the anterior two thirds of the spinal cord.

Brown-Sequard Syndrome (Lateral Cord Syndrome)

- **Characteristics:** Ipsilateral paralysis or paresis is noted, together with ipsilateral loss of touch, pressure, and vibration and contralateral loss of pain and temperature.
- **Cause:** The lesion is caused by a transverse hemisection of the cord (half of the cord is transected from north to south), usually as a result of a knife or missile injury, fracture-dislocation of a unilateral articular process, or possibly an acute ruptured disk.

Woll, 1986 This useful reference composed of articles written by trained spinal cord injury nurse practitioners offers valuable insights and practical information on the rehabilitation period and its critical aspects. The book deals with the incidence, epidemiology, etiology and pathophysiology of each problem discussed. Therapeutic plans, management regimens and educational programs are discussed in detail with specific attention paid to psychosocial ramifications. Also provided is information on the common conditions that threaten the rapid, successful recovery of the average spinal cord injured patient. Standards of Spinal Cord Injury Nursing Practice American Association of Spinal Cord Injury Nurses, 1998* **Nursing Practice Related to Spinal Cord Injury and Disorders** Linda Love, 2001 This comprehensive guide to the practice of SCI nursing and authoritative resource for all nurses in the field was developed under the auspices of the Eastern Paralyzed Veterans Association (EPVA) in collaboration with the American Association of Spinal Cord Injury Nurses (AASCIN), the only nursing organization devoted exclusively to promoting excellence in meeting the nursing care needs of individuals with SCI. It was designed to meet the needs of nurses with varying years of experience in the specialty, working in a variety of roles and practice settings. The organizing framework for this Core Curriculum comprises six sections: Background Information for Nursing Practice Related to Spinal Cord Impairment; SCI provides background information for SCI nursing practice, including the philosophy, goals and process of SCI nursing practice; diversity in nursing practice roles and settings; cultural issues and collaboration in teams; Foundation for Nursing Practice Related to SCI provides the practicing nurse with a foundation including brief presentations of anatomy and physiology of the spine and spinal cord and overview of the consequences of SCI, including special issues related to pediatric SCI care; Guidelines are provided for comprehensive neurologic assessment; Functional Alterations: Physical Domain addresses the myriad physical functional alterations that occur with SCI because improving function and promoting independence are primary goals of rehabilitation. These functional alterations are organized around body systems; Functional Alterations: Personal Domain continues the focus on functional alterations but emphasizes the psychological/psychosocial domain rather than the physical domain. Topics include sexuality and reproduction, body image, family stress and coping and activity and exercise; Trajectory of SCI Nursing Care provides a trajectory of nursing

care throughout the care continuum realizing that rehabilitation is an ongoing process which begins at the onset of impairment and extends throughout the entire episode of SCI and across the life span Beginning with prevention of the initial injury this section also includes trauma care critical care acute rehabilitation caregiver training and support community reintegration and independent living the prevention and management of secondary disabilities and issues related to aging with a disability Shaping SCI Nursing Practice addresses topics that shape professional practice of nurses in this specialty field including improvement and outcome evaluation and research priorities *Spinal Cord Injury Nursing Education* ,1983
