Roe,2012-12-06 When we learn from a patient clinician or medical record that a drug has been discontinued it is logical to ask why The drug may no longer be needed it may not have produced the desired effect it may have produced an adverse reaction a better drug may be available to replace the original drug The patient may have discontinued the drug because he or she could not see why it was necessary or the patient may have discontinued the drug because of unpleasant side effects A drug may not work because its absorption is reduced by physical or chemical interaction with another drug or a food component It may also not work because the patient s metabolism is speeded up or inhibited to an extent such that the desired duration of drug action is not obtained Such an effect may be related to a change in diet Side effects may be related to consumption of specific foods or beverages or to an overall change in nutritional status Drug food and drug alcohol incompatibility reactions are frequent but are avoidable if a patient is warned of their possible occurrence Drugs may also produce nutritional deficiencies especially in a patient whose diet is marginal in those nutrients depleted by the particular drug Careful prescribing practices together with appropriate nutrient supplements will serve to reduce the risk of these incompatibilities Catalog.
