Nutritional Influences on Bone Health Peter Burckhardt, Bess Dawson-Hughes, Connie M. Weaver, 2010-06-16 The seventh symposium on Nutritional Aspects of Osteoporosis continues to be the primary forum for scientists to focus on the impact of nutrition on bone health in general Since 1991 the year of the first symposium research in this field has increased impressively and has become an established part of research and science in osteology This symposium in particular featured many global comparisons in diet and the effect on bone As Western diet permeates more of the globe and the population continues to grow it is meaningful to study the impact of these changes on bone health as diet is one of the few major modifiable factors which in turn affects health care costs Calcium vitamin D and acid base balance continued to dominate the discussion The symposium offered an opportunity to learn about theories and data in nutritional research concerning bone as well as methodological approaches to classify diets The proceedings allow the reader to capture the new messages to analyze the new scientific data presented and to use the book as a source of references in this field Peter Burckhardt Bess Dawson Hughes
