Bratvold, R.W. Miller, 1984 Plastic materials are used in a variety of applications in devices and appliances each requiring different type materials and levels of performance The first step in maintaining acceptable levels of product safety performance is an evaluation of the applications or uses of component materials including polymeric Such evaluations must include 1 a determination of the functional use of the plastic part critical versus non critical properties 2 inputting manufacturing considerations 3 establishing a performance oriented test program 4 preparation of comprehensive reports of test results for use in finished product compatibility reviews and 5 establishing a cost optimized follow up program for assurance that the same component materials are used in continuing finished product production Chromatography for Sustainable Polymeric Materials Ann-Christine Albertsson, Minna Hakkarainen, 2008-04-30 With the highest impact factor of all publications ranked by ISI within Polymer Science this collection of short and concise reports on the physics and chemistry of polymers each written by world renowned experts is still valid and useful after 10 years **Selection of Polymeric Materials** E. Alfredo Campo, 2008-03-06 Today engineers designers buyers and all those who have to work with plastics face a dilemma There has been a proliferation of test methods by which plastic properties are measured The property data measured by these test methods are not identical and sometimes have large differences How are engineers designers buyers going to decide the type and resin grade and their property data Which are the valid test methods The right plastic property data are the difference between success and failure of a design thus making the property selection process critical For the first time this book provides a simple and efficient approach to a highly complex and time consuming task There are over 26 000 different grades of polymers and millions of parts and applications further adding to the difficulty of the selection process Selection of

Polymeric Materials steers engineers and designers onto the right path to selecting the appropriate values for each plastic property. A large amount of property information has been provided to teach and assist the plastic part designer and others in selecting the right resin and properties for an application. Various standards including ASTM, ISO, UL, and British Specifications have been discussed to help the readers in making sound decisions. A simple and efficient approach to a highly complex and time consuming task. Allows engineers to select from various standards including ASTM, ISO, UL, and British Specification. Presents information on properties such as tensile strength, melt temperature, continuous service temperature, moisture exposure, specific gravity, and flammability ratings. Tried and true values narrow myriad choices down quickly for readers.
