Radio Occultations Using Earth Satellites A Wave Theory Treatment:

Radio Occultations Using Earth Satellites William G. Melbourne, 2005 the wave theory foundations of today's radio occultation techniques Forty years ago the premier radio occultation problem was how to profile the atmosphere and radius of Mars using signals sent by the Mariner 4 spacecraft Researchers then could rely on ray theory based techniques for accurate analysis of the thin uniform Martian atmosphere Today's radio occultation challenges mostly involve communications platforms and related data instrument systems and applications in the Earth's own atmosphere To deal with the density and complexity of this multilayered medium an analytical framework that goes beyond ray theory is needed Setting the cutting edge for the field Radio Occultations Using Earth Satellites A Wave Theory Treatment develops a purely wave theoretic approach to occultation analysis This approach yields more nuanced results than either ray or hybrid ray wave methodologies offer and proves suitable for the many variables at work in today's problems This groundbreaking text provides An introduction to the general theory of radio occultations Development of ray theory and scalar diffraction treatments of radio propagation processes Development of a wave theoretic treatment of the above wave propagation processes The correspondence between wave and ray theories A discussion of how to use a wave theoretic approach to infer the refractive properties of the propagation medium from a time series set of observations of the propagated wave's phase and amplitude A comprehensive resource that clearly defines the latest topics and methodologies Radio Occultations Using Earth Satellites is a must have text for engineers scientists students and managers in satellites communications navigation deep space and planetary exploration aerospace atmospheric science physics and engineering The Deep Space Communications and Navigation Series is authored by scientists and engineers with extensive experience in astronautics communications and related fields It lays the foundation for innovation in the areas of deep space navigation and communications by disseminating state of the art knowledge in key technologies **Radio Occultation Method for**

Remote Sensing of the Atmosphere and Ionosphere Yuei-An Liou, 2010-02-01 The book is devoted to radio occultation RO remote sensing of the earth's atmosphere and ionosphere as a global method of monitoring This technique used the radio links satellite to satellite when a satellite receiver setting or rising behind the earth's atmosphere is relative to a satellite emitter of radio waves During setting the radio ray perigee moves through the ionosphere and ionosphere Atmospheric and ionospheric effects arise in most cases owing to influence of a zone near the radio ray perigee and cause significant variations of the amplitude phase and frequency of the radio waves These variations enable determination of the altitude profiles of temperature pressure refractivity density humidity and turbulence in the atmosphere distribution of the electron density in the ionosphere and the wave phenomena at different altitudes with a global coverage The aim of this book consists of the systematic description of the different approaches results of investigation and perspectives of the RO remote sensing as a tool for investigations of the atmosphere and ionosphere *Digital Satellite Navigation and Geophysics* Ivan G.
