Radiolabeled Monoclonal Antibodies For Imaging And Therapy:

Radiolabeled Monoclonal Antibodies for Imaging and Therapy Suresh C. Srivastava, 2013-03-14 The advent of hybridoma technology leading to the successful production of monoclonal antibodies against a variety of tumor associated antigens has during the last decade provided a very powerful tool for research and clinical investigations These highly specific reagents have essentially replaced the polysera of the earlier days The successful demonstration of the many wide ranging capabilities of the monoclonal antibody technique has already begun to exert an enormous impact on diverse areas of research in basic science and medicine In particular the potential of monoclonal antibodies to serve as carriers for selective targeting of radionuclides to tumors for diagnosis or therapy has stimulated an intense surge of research interest and even revived hopes of realizing Ehrlich's concept of the magic bullet Indeed the technology appears to be on the threshold of a revolution in diagnosing and treating malignant disease Much work remains to be done however and even though the progress has been impressive results to date have shown only moderate success There is no question that the limited success we have achieved thus far is merely a prelude to the many more exciting developments yet to come *Radiolabeled Monoclonal Antibodies for Imaging and Therapy*, 1986 This meeting focused on areas of research on radiolabeled monoclonal antibodies Topics covered included the production purification and fragmentation of monoclonal antibodies and immunochemistry of hybridomas the production and the chemistry of radionuclides the radiohalogenation and radiometal labeling techniques the in vivo pharmacokinetics of radiolabeled antibodies the considerations of immunoreactivity of radiolabeled preparations the instrumentation and imaging techniques as applied to radioimmunodetection the radiation dosimetry in diagnostic and therapeutic use of labeled antibodies the radioimmunoscintigraphy and radioimmunotherapy studies and perspectives and directions for future research Tutorial as well as scientific lectures describing the latest research data on the above topics were presented Three workshop panels were convened on Methods for Determining Immunoreactivity of Radiolabeled Monoclonal Antibodies Problems and Pitfalls Radiobiological and Dosimetric Considerations for Immunotherapy with Labeled Antibodies and The Human Anti Mouse Antibody Response in Patients **Cancer Therapy with Radiolabeled Antibodies** David M. Goldenberg, 2018-01-18 Cancer Therapy with Radiolabeled Antibodies explores the most current experimental and clinical advances in the newly emerging field of cancer radioimmunotherapy RAIT Providing a multidisciplinary and international context some of the world's leading experts examine the problems and prospects of RAIT from radiation immunological chemical physical physiological and clinical perspectives with both overviews and original research Discussions cover the up to date clinical results in the RAIT of ovarian breast colorectal and brain cancers as well as the current status of RAIT in the management of B cell lymphomas Radiobiology dosimetry radiochemistry targeting biology in experimental models clinical experiences in hematopoietic and solid tumors and new approaches to improve cancer radioimmunotherapy are also discussed In addition new dosimetry concepts new labeling methods new concepts of antibody

pharmacokinetics and new methods to enhance selective cancer radioimmunotherapy are included **Biomedical Index to PHS-supported Research: pt. A. Nuclear Medicine Therapy Cumali Aktolun, Stanley J. Goldsmith, 2012-08-31 Nuclear Medicine Therapy presents the state of the art in targeted radionuclide therapy both in clinical practice and contemporary clinical investigation and trials With contributions from an internationally distinguished group of physicians and scientists the book is devoted entirely to the use of nuclear medicine techniques and technology for therapy of malignant and benign diseases Individual chapters cover the scientific principles and clinical applications of radionuclide therapy and the state of clinical trials of agents currently under investigation in the therapy of tumors involving virtually every organ system Due to overlapping interest in techniques indications and clinical use the development of radionuclide therapy attracts considerable input from other medical specialists whose collaboration is essential including radiation and medical oncologists hematologists diagnostic radiologists hepatologists endocrinologists and rheumatologists And because radionuclide therapy is a rapidly evolving field of nuclear medicine it is the aim of this volume to appeal to all specialists involved in targeted radionuclide therapy and to contribute to the standardization of the practice globally **Principles of Cancer Biotherapy** Robert K. Oldham, Robert O.

Dillman, 2009-08-29 At the time of the first edition of Principles of Cancer Biotherapy in 1987 this book represented the first comprehensive textbook on biological therapy In 1991 when the second edition was published there was still some doubt on the part of many oncologists and cancer researchers as to the therapeutic value of these new approaches By 2003 and the fourth edition it was generally agreed that biopharmaceuticals were producing major opportunities for new cancer therapies Cancer biotherapy has now truly matured into the fourth modality of cancer treatment This fifth revised edition describes the tremendous progress that has been made in recent years using biologicals in cancer treatment This book summarizes an evolving science and a rapidly changing medical practice in biotherapy In this new millennium it is now possible to envision a much more diversified system of cancer research and treatment that will afford greater opportunities for a patient s personalized cancer treatment This was first envisioned in the 1987 initial edition of this textbook and is now a new and popular approach to cancer treatment Some forms of cancer biotherapy use the strategy of tumor stabilization and control through continued biological therapy akin to the use of insulin in the treatment of diabetes This textbook illustrates new methods of thinking and new strategies for control of cancer It is always difficult to move from past dogma to future opportunity but this fifth edition of Principles of Cancer Biotherapy illustrates why it is so important to the patients for researchers and clinicians to explore and quickly apply these new opportunities in cancer biotherapy Research Awards Index ,1989
