Wong, 2020-12-08 This book reviews locoregional radionuclide cancer therapies LRCT Proving an increasingly viable alternative to radiotherapy radionuclide therapy includes a diversity of choices of well characterized biochemical and physiologic target molecules The delivery and retention of radionuclides may be monitored by advanced imaging for exact tissue localization and for real time dosimetry to enable personalized precision medicine

Radiopharmaceuticals in human cancer therapies are typically delivered in systemic routes but can also be designed for locoregional routes to harness pharmacokinetic advantages of higher payload and lower systemic toxicities This book explores the latest advancements and clinical considerations of the locoregional approach Throughout the chapters the clinical and scientific bases of cancer treatment and the locoregional use of radionuclides are explored Mathematical models of radiation dosimetry of locoregional radionuclides on tissues are studied using common models for multiple commercially available radionuclides Rodent and canine tumor models of LRCT are compared for selected radionuclides and radiopharmaceuticals The practical aspects of radiopharmaceuticals production marketing transport as well as radiation protection are reviewed Finally the combination of LRCT with immunotherapy and other cancer therapies and prospective future use of LRCT are discussed This is a guide for practicing nuclear physicians interventional radiologists radiation oncologists radiation scientists veterinarians and oncologists to expand their knowledge base and to prepare for designing locoregional radionuclide cancer therapies in animals and in humans

Targeted Radionuclide Tumor Therapy Torgny Stigbrand, Jorgen Carlsson, Gregory P. Adams, 2008-09-01 The last three decades have provided opportunities to explore the potential of treating malignant diseases with antibodies or other targeting molecules labelled with nuclides While considerable advances have been reported there is still a significant amount of work left to accomplish before our ambitions can be achieved It now seems timely to review the accomplishments achieved to date and to clarify the challenges that remain The choice of radionuclide the conjugation procedure employed and the selection of suitable targets were early issues that were faced by our field that still persist however we can now tackle these obstacles with significantly better insight The expanding array of new targeting molecules recombinant antibodies peptides and agents based upon alternate scaffolds may increase the therapeutic efficacy or even modify the radiation sensitivity of the targeted tumor cell The title of this book Targeted Radionuclide Tumour Therapy Biological Aspects was selected to reinforce the concept that a major focus of this volume was devoted to understanding the biological effects of targeting and radiation These important issues have not previously been the primary focus in this context Furthermore our rapidly expanding knowledge of different types of cell

death and the increasingly likely existence of cancer stem cells suggests to us that even more efficient approaches in targeting might be possible in the future
