Anthony, 2013-11-11 It is a great pleasure for me to write a foreword to this fine work by many different collaborators under the aegis of my friend and one time colleague in Geneva Dr E James Anthony because it represents a collective effort toward a goal that today seems very necessary yet difficult to attain This goal is the synthesis of developmental psychology with all the other aspects of child psychology into a science of ontogenetic development from birth to maturity encompassing three points of view the biological the behavioral and the internalization of the behavioral into mental life This synthesis is indeed necessary since it is not possible to understand a disorder or a developmental arrest without having a sufficient knowledge of the ensemble of elements that has brought it about At each level of development the personality of the subject attempts to integrate a multiplex system of factors in varying proportion and without carefully and fully considering this interdigitating whole it is not easy to disentangle the mechanisms involved in any particular functional disintegration **Smith's**
