Handbook of Research on Leadership Experience for Academic Direction (LEAD) Programs for Student Success Salinitri, Geri, 2020-02-28 Leadership Experience for Academic

Directions LEAD is a program that was developed as a service learning program for teacher candidates in preparation for the teaching career. As youth populations continue to diversify and as the issues impacting youth continue to surface, it is the responsibility of educators, administrators, and the governments to provide all the opportunities for youth to succeed academically, socially, and personally. Teachers especially are instrumental in making this happen; therefore, it is imperative that teachers come into the profession with the cognitive and non-cognitive skills to motivate youth to succeed. The Handbook of Research on Leadership Experience for Academic Direction LEAD Programs for Student Success is a critical scholarly book that explores the many facets of the teaching profession as they relate to working with at-risk youth and helping them reach their full potential. This book provides the groundwork for programs that will succeed at the K-12 education level and at the teacher education level. Featuring a range of topics such as human capital, mental health, and social learning theory, this book is essential for academicians, teaching professionals, administrators, professional development educators, policymakers, researchers, and students.

Murder in the Courtroom Brigitte Vallabhajosula, 2015. Answers to many legal questions often depend on our understanding of the relationship between the human brain and behavior. While there is no evidence to suggest that violence is the sole result of cognitive impairment, research does suggest that frontal lobe impairment in particular may contribute to the etiology of violent behavior. *Murder in the Courtroom* presents a comprehensive and detailed analysis of issues most relevant to answering questions regarding the link between cognitive functioning and violence. It is the first book to focus exclusively on the etiology and assessment of cognitive impairment in the context of violent behavior and the challenges courts face in determining the reliability of neuroscience evidence. Objective discussions of currently available neuropsychological tests and neuroimaging techniques and their strengths and limitations provide a methodology for the assessment of cognitive dysfunction in the context of violent behavior that is likely to withstand a Daubert challenge and include detailed discussions of criminal cases to illustrate important points. Clinical and forensic psychologists and psychiatrists, cognitive neuroscientists, and legal professionals will be able to use this book to further their understanding of the relationship between brain function and extreme violence.
