

$$(L(tx) - L(t))/\log x \sim (L(ty) - L(t))/\log y$$

as $t \rightarrow \infty$ for all $x, y > 0$ (and $\neq 1$). Both definitions can be given in a number of equivalent forms; from this it becomes apparent that the second (more complicated) relation can be considered as regular variation of second order. The inverses of the functions satisfying the second relation form an interesting class too. Applications of both classes in probability theory will be given.

Some stochastic methods and models in life testing and reliability

BENJAMIN EPSTEIN, *Technion — Israel Institute of Technology*

In this lecture we describe some stochastic methods and models which play a key role in the statistical analysis of life test and failure data and in the probabilistic analysis of systems performance over time.

The regenerative method for analysing stochastic simulations

DONALD L. IGLEHART, *Stanford University*

This expository paper surveys recent work on the estimation of parameters associated with the output of stochastic simulations. The regenerative method enables the simulator to select a starting state, determine run lengths required for prescribed accuracy, and construct confidence intervals. In the context of the regenerative method the following topics will be discussed: ratio estimators, quantile estimation, selection problem, control variates and approximation techniques. Theoretical calculations and simulation results will be presented for some simple stochastic processes.

Stochastic processes in fluctuation theory

MARK KAC, *Rockefeller University*

After providing the background and a brief review of the theory of stationary, Gaussian, Markovian processes as they relate to irreversible thermodynamics, the discussion will center around transport equations with fluctuating terms.

Shedler, 1991 **Regenerative Stochastic Simulation** G.S. Shedler, **An Introduction to the Regenerative Method for Simulation Analysis** M. A. Crane, A. J. Lemoine, 1977 The purpose of this report is to provide an introduction to the regenerative method for simulation analysis The simulations are simulations of stochastic systems i e systems with random elements The regenerative approach leads to a statistical methodology for analyzing the output of those simulations which have the property of starting afresh probabilistically from time to time The class of such simulations is very large and very important including simulations of a broad variety of queues and queueing networks inventory systems inspection maintenance and repair operations and numerous other situations Regenerative Stochastic Simulation: Simultaneous Trigger Events G. Cassandras, Stéphane Lafortune, 2021-11-11 This unique textbook comprehensively introduces the field of discrete event systems offering a breadth of coverage that makes the material accessible to readers of varied backgrounds The book emphasizes a unified modeling framework that transcends specific application areas linking the following topics in a coherent manner language and automata theory supervisory control Petri net theory Markov chains and queueing theory discrete event simulation and concurrent estimation techniques Topics and features detailed treatment of automata and language theory in the context of discrete event systems including application to state estimation and diagnosis comprehensive coverage of centralized and decentralized supervisory control of partially observed systems timed models including timed automata and hybrid automata stochastic models for discrete event systems and controlled Markov chains discrete event simulation an introduction to stochastic hybrid systems sensitivity analysis and optimization of discrete event and hybrid systems new in the third edition opacity properties enhanced coverage of supervisory control overview of latest software tools This proven textbook is essential to advanced level students and researchers in a variety of disciplines where the study of discrete event systems is relevant control communications computer engineering computer science manufacturing engineering transportation networks operations research and industrial engineering Christos G Cassandras is Distinguished Professor of Engineering Professor of Systems Engineering and Professor of Electrical and Computer Engineering at Boston University St phane Lafortune is Professor of Electrical Engineering and Computer Science at the University of Michigan Ann Arbor **ACM Transactions on Modeling and Computer Simulation** ,2001 Regeneration and Networks of Queues Gerald S.

Shedler,2012-12-06 Networks of queues arise frequently as models for a wide variety of congestion phenomena Discrete event simulation is often the only available means for studying the behavior of complex networks and many such simulations are non Markovian in the sense that the underlying stochastic process cannot be represented as a continuous time Markov chain with countable state space Based on representation of the underlying stochastic process of the simulation as a generalized semi Markov process this book develops probabilistic and statistical methods for discrete event simulation of networks of queues The emphasis is on the use of underlying regenerative stochastic process structure for the design of simulation experiments and the analysis of simulation output The most obvious methodological advantage of simulation is that in principle it is applicable to stochastic systems of arbitrary complexity In practice however it is often a decidedly nontrivial matter to obtain from a simulation information that is both useful and accurate and to obtain it in an efficient manner These difficulties arise primarily from the inherent variability in a stochastic system and it is necessary to seek theoretically sound and computationally efficient methods for carrying out the simulation Apart from implementation considerations important concerns for simulation relate to efficient methods for generating sample paths of the underlying stochastic process the design of simulation experiments and the analysis of simulation output
