Concrete Gravity and Arch Dams on Rock Foundation Bronstein Vadim Izrailovich, Vainberg Alexander Isaakovich, Gaziev Erast Grigorievich, Landau Yuri Alexandrovich, Mgalobelov Yuri Borisovich, 2021-04-21 This book on the basis of a generalization and critical analysis of materials on constructed concrete dams accumulated experience in their operation and current trends considers a set of problems associated with the design and construction of concrete dams. The modern principles of designing gravity and arch dams and the main provisions of the calculation justification of their reliability in comparison with US standards are outlined. Ways of increasing the efficiency of dams through the improvement of layout and structural solutions, calculation methods and a more complete consideration of the features of natural conditions are considered. The book presents and analyzes the designs of erected concrete dams which allows for a better understanding of the approaches and decision making principles for designing dams taking into account the specifics of natural construction and other conditions and also analyzes a number of new solutions that reflect the various ways that engineering theory and practice has sought further improvement of concrete dams. Natural History of the Bell Rock J. M. Campbell, In consequence probably of my connection of more than fifty years with the Northern Lighthouse Board and of the almost equally long service of my father I have been requested and with much diffidence have complied with the request to write by way of Introduction to these very interesting and instructive Notes from the Bell Rock a few words regarding Lighthouses and a short account of the Northern Lighthouse Service and its Lightkeepers. My love for that service and the esteem I have for those responsible and patient watchmen of the night whose duty it is to keep their lights burning to guard the mariner from some of the dangers to which he is exposed and to guide him on his way over the vasty deep may possibly enable me to say something to interest readers of the Notes in a service whose appropriate motto is *In Salutem Omnium*. The origin as well as the early history of lighthouses is involved in much obscurity although we learn from ancient writers that lights of some sort or beacon fires were used for guiding vessels or warning

them of danger at least three hundred years before the Christian era The Colossus of Rhodes and the Pharos of Alexandria are those that we first read of but very little authentic information is to be got regarding them At a much later date we know that sea lights for such purposes were produced by the burning of wood and coal in chauffers on coasts where they could be well seen One such beacon fire was shown from a tower on the Isle of May at the entrance to the Firth of Forth from the year 1635 till 1816 when the present lighthouse was built and is supposed to have been the first sea light on the coast of Scotland It is not unlikely however that long before that date some of the most dangerous parts of the Mediterranean were lighted in a like primitive manner The first lighthouse of any note of which we have authentic record is the Tour de Corduan near the mouth of the river Garonne in the south west of France which was founded in 1584 but not completed and lighted till 1610 On account of the style and grandeur of its architecture it was long regarded as one of the wonders of the world the Pharos of Alexandria having been regarded as another Its lightroom was originally constructed for the combustion of wood in a kind of chauffer raised six feet above the floor of the lantern but it has undergone many alterations and improvements since then to bring it into keeping with the progressing and modern system of lighthouse illumination which has made great strides during the last half century
