**Mixed Martial Arts and the Quest for Legitimacy** Mark S. Williams, 2018-03-19 Mixed martial arts or MMA is widely regarded as the fastest growing sport. Events fill stadiums around the world and draw vast television audiences earning strong revenue through pay per view at a time when other sports have abandoned it. In 2016 the Ultimate Fighting Championship was bought by the massive talent agency WME IMG for 4 billion. Despite this success much of the public remains uneasy with the sport which critics have denounced as human cockfighting. Through an exploration of violence, class, gender, race, and nationalism the author finds that MMA is both an expression of the positive values of martial arts and a spectacle defined by narcissism, hate, and patriarchy. The long term success of MMA will depend on the ability of promoters and athletes to resist indulging in spectacle at the expense of sport. *Research and Development in Intelligent Systems XXVI* Richard Ellis, Miltos Petridis, 2009-10-28 The most common document formalisation for text classification is the vector space model founded on the bag of words phrases representation. The main advantage of the vector space model is that it can readily be employed by classification algorithms. However the bag of words phrases representation is suited to capturing only word phrase frequency. Structural and semantic information is ignored. It has been established that structural information plays an important role in classification accuracy. 14 An alternative to the bag of words phrases representation is a graph based representation which intuitively possesses much more expressive power. However this representation introduces an additional level of complexity in that the calculation of the similarity between two graphs is significantly more computationally expensive than between two vectors. See for example 16. Some work see for example 12 has been done on hybrid representations to capture both structural elements in the graph model and significant features using the vector model. However the computational resources required to process this hybrid model are still extensive. Children, Adolescents, and Media Violence Steven J.
