Science Ian Sales, 2012 Rocket Science is a collection of 17 original stories of hard science fiction accompanied by 5 original non fiction essays on space exploration Too much science fiction seems to rely on magical technology or trivialises the astonishing size and wonder of the real universe Though it is difficult dangerous and expensive to get into space the rewards for doing so more than outweigh any risk or cost It may even prove to be the human race's only hope of survival Given all that science fiction's predilection for action adventure stories set in galactic empires does feel like a squandering of the genre's potential The stories and essays in Rocket Science are about the real world either now or in the future They are about real science not just rocket science but also quantum physics genetics computer science They are not just stories of exploration but family dramas love triangles alternate histories hubris **Rocket Science** Jay Lake, 2005 Presents a collection of short fiction set in Texas about ghosts angels gods and aliens
