Bence,1990 The Groundfish Analysis Investigation of the Tiburon Laboratory conducts an annual survey of age 0 rockfish Genus *Sebastes* A major long term goal of these surveys is to estimate the strength of a year class based on their abundance at age 0 This requires that a positive relationship between recruitment to the fishery and age 0 abundance be established In this report we examine the statistical power for establishing such a relationship p ii **Data-limited Research in Stock Assessment to Increase the Understanding of Fisheries Resources and Inform and Improve Management Efforts** Giuseppe Scarcella,Simone Libralato,Natalie Anne Dowling,Joanna Mills Flemming,Matthias Wolff,2023-04-10 *Federal Register* ,1978-04 *Fishery Management Plan for the Gulf of Alaska Groundfish Fishery* North Pacific Fishery Management Council,1979 As directed by the Fishery Conservation and Management Act of 1976 P L 95 265 the North Pacific Fishery Management Council is preparing fishery management plans for those fisheries within its area of jurisdiction This document was the first of the plans to be completed by the Council since its formation in October 1976 The Fishery Management Plan for the Gulf of Alaska Groundfish Fishery was developed by a multi agency team composed of members from the National Marine Fisheries Service the Alaska Department of Fish and Game the International Pacific Halibut Commission and the University of Washington It was approved by the North Pacific Fishery Management Council on September 24 1977 for submission to the Secretary of Commerce Regulations to implement this plan were published on the same date It was approved by the Secretary of Commerce and published in the Federal Register on April 21 1978 The Plan has been amended seven times beginning December 1 1978 Amendment 1 implemented and most recently November 1 1979 Amendment 7 implemented An explanation of these amendments is attached from page 1 *Amendment 16-2 to the Pacific Coast Groundfish Fishery Management Plan, Rebuilding Plans for Darkblotched Rockfish, Pacific Ocean Perch, Canary Rockfish, and Lingcod* ,2003 NOAA Technical Report NMFS. ,1984 *National Oceanic and Atmospheric Administration Technical Report National Marine Fisheries Service* ,1993 *An Atlas of Reproductive Development in Rockfishes, Genus Sebastes* Franklin R. Shaw,Joseph Frank Morado,Vanessa C. Lowe,Susanne Finckh McDermott,2012 The genus *Sebastes* consists of over 100 fish species all of which are viviparous and long lived Previous studies have presented schemes on the reproductive biology of a

single targeted species of the genus *Sebastes* but all appear to possess a similar reproductive biology as evidenced by this and other studies. This atlas stages major events during spermatogenesis, oogenesis, and embryogenesis, including atresia, in six species of *Sebastes*: *S. alutus*, *S. elongatus*, *S. helvomaculatus*, *S. polyspinis*, *S. proriger*, and *S. zacentrus*. Our study suggests that the male reproductive cycle of *Sebastes* is characterized by 11 phases of testicular development with 10 stages of sperm development and 1 stage of spermatozoa atresia. Ovarian development was divided into 12 phases with 10 stages of oocyte development, 1 stage of embryonic development, and 1 stage of oocyte atresia. Embryonic development up to parturition was divided into 33 stages following the research of Yamada and Kusakari (1991). Reproductive development of all six species examined followed the developmental classifications listed above, which may apply to all species of *Sebastes* regardless of the number of broods produced annually. Multiple brooders vary in that not all ova are fertilized and progress to embryos; a proportion of ova are arrested at the pre-vitellogenic stage. Reproductive stage examples shown in this atlas use *S. elongatus* for spermatid development, *S. proriger* for oocyte development, and *S. alutus* for embryological development because opportunistic sampling only permitted complete analysis of each respective developmental phase for those species. The results of this study and the proposed reproductive phases complement the recommended scheme submitted by Brown and Peterson et al. (2011), who call for a standardization of terminology for describing reproductive development of fishes.
