High-Resolution Radiographs of the Hand Giuseppe Guglielmi, Wilfred C. G. Peh, Mario

Cammisa, 2008-09-27 Plain radiography is still alive In many institutions including ours conventional radiography has been replaced by digital systems including imaging plate based computed radiography and flat panel detector based digital radiography Even for the education of radiation technologists conventional film screen radiography has been dephasized and their education is concentrated on digital systems Spatial resolution of a conventional system is still far better than the current digital systems although the dynamic range is wider in the latter system Industrial film radiography with small grain size and direct exposure has an even higher resolution and such high resolution systems are something we lost in the transition from the conventional system to the current PACS friendly system I am pleased to know that Giuseppe Guglielmi and Wilfred Peh have published this textbook of high resolution hand radiographs that cannot be obtained with any other techniques Radiography has always been the most important modality in the evaluation of the hand and moreover high resolution industrial films are extremely effective in the evaluation of the hand particularly for assessing subtle erosions Hands are not just one of the peripheries of the human body They reflect conditions of the whole human body Not only the metabolic status but also many congenital disorders are manifested in the hand Radiographic findings of the hand are often specific and contribute to the diagnoses a great deal There have been several publications concerning the radiology of the hand and they have been well accepted
