*A History of Magic and Experimental Science: The first thirteen centuries of our era* Lynn Thorndike, 1923 Vols 1 2 concern the first 13 centuries of the Christian era vols 3 4 the 14th and 15th centuries vols 5 6 the 16th century and vols 7 8 the 17th century **A History of Magic and Experimental Science** Lynn Thorndike, 1923 **A History of Magic and Experimental Science: The first thirteen centuries of our era** Lynn Thorndike, 1923 A history of science and magic spanning the period from early Christianity through early modern Europe to the end of the 17th century **History of Magic and Experimental Science (Vol. 1&2)** Lynn Thorndike, 2023-12-26 Lynn Thorndike's seminal work *History of Magic and Experimental Science* Volumes 1 2 is a groundbreaking exploration of the intricate interplay between magic alchemy and the nascent field of experimental science from antiquity to the Renaissance Thorndike employs a meticulous historical approach blending rigorous scholarship with an engaging narrative style that brings to life the evolution of scientific thought The two volumes cover a spectrum of practices and beliefs dissecting how magical traditions laid the groundwork for what would eventually become modern scientific inquiry thus situating magic at the crux of intellectual history Thorndike a prominent historian of science in the early 20th century drew on his extensive background in both philosophy and history to illuminate the often overlooked connections between magic and science His deep interest in the historical roots of scientific practices coupled with a conviction that understanding these roots is crucial for comprehending modern science propelled him to undertake this ambitious project His work challenges the prevailing narrative that dismisses magic as mere superstition instead arguing for its essential role in shaping scientific minds This two volume set is invaluable for scholars students and anyone intrigued by the foundations of scientific thought Thorndike's intricate narrative not only enriches our understanding of history but also encourages readers to reassess the boundaries between magic and science It is a must read for those who wish to grasp the profound interrelation of cultural beliefs and scientific advancement [A History of Magic and Experimental Science During the First Thirteen Centuries of Our Era](#) Lynn Thorndike, 1923 [Roger Bacon and the Sciences](#) Hackett, 2021-10-25 This volume deals with the philosophy and thought of Roger Bacon It is an effort to bring Roger Bacon studies up to date Attention is given to a wide range of topics Bacon's life and works Bacon's contribution to the trivium language studies and the quadrivium scientific mathematical studies his notion of a science his moral philosophy Bacon's contribution to medicine alchemy astrology Bacon's positions in physics and metaphysics an up dated bibliography of Bacon studies and a review of the state of Bacon Manuscripts The volume situates Roger Bacon in the context of 13th century philosophy and thought as well as demonstrating his importance for later thinkers It is expected that it will be a major new contribution to Medieval and Renaissance Studies **Sapientia Astrologica: Astrology, Magic and Natural Knowledge, ca. 1250-1800** H Darrel Rutkin, 2019-04-24 This book explores the changing perspective of astrology from the Middle Ages to the Early Modern Era It introduces a framework for understanding both its former centrality and its later

removal from legitimate knowledge and practice The discussion reconstructs the changing roles of astrology in Western science theology and culture from 1250 to 1500 The author considers both the how and the why He analyzes and integrates a broad range of sources This analysis shows that the history of astrology in particular the story of the protracted criticism and ultimate removal of astrology from the realm of legitimate knowledge and practice is crucial for fully understanding the transition from premodern Aristotelian Ptolemaic natural philosophy to modern Newtonian science This removal the author argues was neither obvious nor unproblematic Astrology was not some sort of magical nebulous hodge podge of beliefs Rather astrology emerged in the 13th century as a richly mathematical system that served to integrate astronomy and natural philosophy precisely the aim of the New Science of the 17th century As such it becomes a fundamentally important historical question to determine why this promising astrological synthesis was rejected in favor of a rather different mathematical natural philosophy and one with a very different causal structure than Aristotle's

Roger Bacon Essays Andrew George Little, 1914 **Roger Bacon and the Defence of Christendom** Amanda Power, 2013 The English Franciscan Roger Bacon c 1214-92 holds a controversial but important position in the development of modern science He has been portrayed as an isolated figure at odds with his influential order and ultimately condemned by it This major study the first in English for nearly sixty years offers a provocative new interpretation of both Bacon and his environment Amanda Power argues that his famous writings for the papal curia were the product of his critical engagement with the objectives of the Franciscan order and the reform agenda of the thirteenth century church Fearing that the apocalypse was at hand and Christians unprepared Bacon explored radical methods for defending renewing and promulgating the faith within Christendom and beyond Read in this light his work indicates the breadth of imagination possible in a time of expanding geographical and intellectual horizons

King, Martial Staub, 2011-05-23 This collection of essays is based on a conference in honour of David Luscombe held at the University of Sheffield in September 2006 under the title Knowledge Discipline and Power in the Middle Ages The Mediaeval Attitude Toward Astrology Theodore Otto Wedel, 1920

Creational Theology and the History of Physical Science: The Creationist Tradition from Basil to Bohr Christopher B. Kaiser, 2021-12-06 This volume documents the role of creational theology in discussions of natural philosophy medicine and technology from the Hellenistic period to the early twentieth century Four principal themes are the comprehensibility of the world the unity of heaven and earth the relative autonomy of nature and the ministry of healing Successive chapters focus on Greco Roman science medieval Aristotelianism early modern science the heritage of Isaac Newton and post Newtonian mechanics The volume will interest historians of science and historians of the idea of creation It simultaneously details the persistence of tradition and the emergence of modernity and provides the historical background for later discussions of creation and evolution **What Galileo Saw** Lawrence Lipking, 2014-12-18 The Scientific Revolution of the seventeenth

century has often been called a decisive turning point in human history. It represents for good or ill the birth of modern science and modern ways of viewing the world. In *What Galileo Saw* Lawrence Lipking offers a new perspective on how to understand what happened then, arguing that artistic imagination and creativity as much as rational thought played a critical role in creating new visions of science and in shaping stories about eye-opening discoveries in cosmology, natural history, engineering, and the life sciences. When Galileo saw the face of the Moon and the moons of Jupiter, Lipking writes, he had to picture a cosmos that could account for them. Kepler thought his geometry could open a window into the mind of God. Francis Bacon's natural history envisioned an order of things that would replace the illusions of language with solid evidence and transform notions of life and death. Descartes designed a hypothetical Book of Nature to explain how everything in the universe was constructed. Thomas Browne reconceived the boundaries of truth and error. Robert Hooke, like Leonardo, was both researcher and artist; his schemes illuminate the microscopic and the macrocosmic. And when Isaac Newton imagined nature as a coherent and comprehensive mathematical system, he redefined the goals of science and the meaning of genius. *What Galileo Saw* bridges the divide between science and art; it brings together Galileo and Milton, Bacon and Shakespeare. Lipking enters the minds and the workshops where the Scientific Revolution was fashioned, drawing on art, literature, and the history of science to reimagine how perceptions about the world and human life could change so drastically and change forever.

**The Westminster Review**, 1864      **London and Westminster Review**, 1864      Westminster and Foreign Quarterly Review, 1863      **Cultural Transfers in Dispute** Bee Yun, 2011-08-08. Our conception of cultures and cultural change has altered dramatically in recent decades; no longer do we understand cultures as isolated units; rather, we see them as hybrid formations constantly engaged in a multidirectional process of exchange and influence with other cultures. Yet the very process by which we represent these cultural transfers is itself subject to cultural, political, and ideological conditions that affect our understanding, acknowledgment, and representation of them. Built around concrete examples of controversial representations of cultural transfer from Asia, the Arab world, and Europe, *Cultural Transfers in Dispute* presents a critical self-reflection on the scholarly practices that underpin our attempts to study and describe other cultures.
