

# Diseases of Spleen

## Splenic tumors

Tumours can develop in the spleen which can be benign or can also be malignant. They can cause haemangioma or angiosarcoma.

## Splenic Abscess

It is a rare condition in which a unilocular abscess develops in the spleen as a result of streptococcus salmonella and gramme negative enteric bacilli infections.

## Splenic infarction

This is a situation in which the spleen doesn't get enough blood, which can give rise to a partial or total infarction and tissue death due to a lack of oxygen in the organ.

## Obstruction of the spleen

When the splenic artery or one of its branches is blocked like by a blood clot, this is called a splenic infarction.

**Biochemical Protozoology As A Basis For Drug Design** Graham H. Coombs,1991-10-07 A compilation of articles on protozoological biochemistry which reviews the subject area and offers information on current research Included in the Topics Covered Are Energy Metabolism Of Anaerobic Parasitic Protists proteinases of African **The Immunology of Parasitic Infections** William Hay Taliaferro,1929 **Immunobiology of Parasites and Parasitic Infections** John Marchalonis,2012-12-06 The phenomena involved in infections of man and domestic animals with metazoan or protozoan parasites present formidable practical problems as well as a theoretical challenge to immunologists molecular biologists and evolutionary biologists With respect to the public health and economic problems malaria for example remains a major health problem with approximately 200 million people being infected yearly and on the basis of World Health Organization estimates more than 1 million children die each year of malaria infections Chapter 4 This volume addresses state of the art immunologic approaches to the development of vaccines for parasitic diseases Chapter 9 and analyses of studies bearing on the antigenic characterization of protozoan and metazoan parasites Chapters 4 5 and 7 on investigations of the role of precise mechanisms underlying natural resistance or non permissiveness of the host to parasitic infections Chapters 1 2 and 12 on induced mechanisms including the generation of parasite specific T cell lines and clones Chapter 6 and on the generation of monoclonal antibodies Chapters 4 and 5 to parasite antigens of distinct developmental stages Great progress has been made in characterizing parasite antigens capable of inducing a protective response in the vaccinated host further progress in this area strongly depends on biochemistry and molecular biology with the long term goal of synthesizing such antigens chemically or producing them by means of recombinant DNA technology Chapter 4 Parasitic Diseases M. Katz,D.D. Despommier,R.W. Gwadz,2012-12-06 Diseases caused by animal parasites remain on a worldwide basis among the principal causes of morbidity and mortality This book gives the medical student and the practitioner the basic information about parasitic protozoa worms and arthropods and the diseases they cause that will enable the reader to recognize and manage them One is impressed with the broad scope of the subject the diversity of the parasitic modes of life and how much there is yet unknown about the biology of parasitism At the same time the book provides vignettes of the often fascinating historical background of our knowledge of animal parasites and glimpses of current research that is beginning to shape the future of parasitology William Trager PH D Professor Emeritus of Parasitology The Rockefeller University New York New York Preface This book fills the need we have felt in teaching parasitic diseases to medical students Many of the available texts are too detailed for what is inevitably an introductory course others that do treat this subject with appropriate brevity are now out of date still others lack documentation of references and thus fail to guide the readers to a broader understanding of this subject We have addressed ourselves to medical students but they are not our sole target Clinicians unfamiliar with the complexities of parasitic diseases need a guide to the diagnosis and management of these infections We

intend our book to serve this function as well      **Immunological Disorders in Mice** Blanka Rihova,Vaclav Vetvicka,1990-11-21 Immunological Disorders in Mice focuses on immunological reactions and diseases based on models provided through studies on genetically based immunological disorders in inbred strains of mice The book discusses various defects affecting all levels of immunological response featuring new data on classical mutations as well as information regarding lesser known immune defects New areas presented include genetic manipulation ontogenetic aspects clinical implications the effect of drugs on immunodefective strains and neuroendocrine regulation A critical evaluation of the data presented through these studies on immune disorders in mice will facilitate the understanding of immunological processes and have significant application in clinical practice Theoretical immunologists animal breeding companies and clinical immunologists will find this text invaluable      **Immunity and Concomitant Immunity in Infectious Diseases** P.

Kallós,1982      Role of the Spleen in the Immunology of Parasitic Diseases ,1979      **Molecular Immunological Considerations in Malaria Vaccine Development** Michael F. Good,Allan J. Saul,1993-10-13 Some of the world s leading research scientists in the field have contributed to this new book on malaria vaccine development The book examines various strategies being pursued against the different stages of the parasite the sporozoite asexual erythrocytic stages and sexual stages It describes vaccines that combat the parasite directly vaccines aimed at preventing disease vaccines based on attenuated parasites and vaccines based on small carefully defined synthetic peptides The book provides a compendium of current approaches lists of preferred antigens and the results of vaccine trials to date Molecular immunology involved with both the natural immune response to parasites and with the constraints on inducing immunity are emphasized throughout the book Views on how vaccines may be tested and then integrated into malaria control programs are also discussed Molecular Immunological Considerations in Malaria Vaccine Development will be useful for researchers and students in immunology parasitology biotechnology vaccine design and tropical and public health      *Migration and Homing of Lymphoid Cells* Alan J. Husband,2020-08-26 First published in 1988 This comprehensive set is crucial to the basic understanding of the immune system and is an essential component of the design and implementation of improved immunization strategies Contains authoritative reviews of cell migration research and addresses the issues of lymphocyte recirculation leading to inductive interactions and the subsequent migration and homing of effector cells generated from these responses Systemic migration of cells from the central and peripheral lymphoid organs the dichotomy of behavior between systemic and mucosal lymphoid cell pools and explanations sought for mechanisms mediating selectivity of migration and homing are covered This set is of interest to problem oriented scientists      **Host Defenses to Intracellular Pathogens** Toby K. Eisenstein,Paul Actor,Herman Friedman,2012-12-06 The subject matter of this volume was the basis for a conference held in Philadelphia in June 1981 and is an important one in the contemporary area of how the host interacts with micro organisms In conception it grew out of a graduate course entitled The Infectious Process which has been taught in

the Department of Microbiology and Immunology at Temple University School of Medicine during the past twelve years This course has explored the broad areas of mechanisms of microbial pathogenesis and host resistance by in depth consideration of selected models of experimental infection and immunity as well as the clinical literature It is noteworthy that there is no adequate text for this material as the subject matter naturally crosses a wide spectrum of traditional disciplinary lines encompassing topics as diverse as the mechanisms of action of bacterial toxins the role of complement and antibody in phagocytosis and the importance of cross reacting bacterial polysaccharide antigens in vaccine development A major portion of the course has always considered cellular immunity as it applies to host defenses to intracellular pathogens It is in this area that the necessity for amalgamation of information from different disciplines is most evident for one must be intimately concerned with the interactions between the microbe and the phagocyte both before and after specific immune recognition

**Living Together** W. Trager, 2012-12-06 William Trager has been an avid student of parasites for over 50 years at the Rockefeller University Around the turn of this century parasitology enjoyed a certain vogue inspired by colonial responsibilities of the technically advanced countries and by the exciting etiological and therapeutic discoveries of Ross Manson Ehrlich and others For some decades the Western hemisphere's interest in animal parasites has been eclipsed by concern for bacteria and viruses as agents of transmissible disease Only very recently initiatives like the Tropical Disease Research programs of WHO World Bank UNDP and the Great Neglected Disease networks of the Rockefeller and MacArthur Foundations have begun to compensate for the neglect of these problems by United States federal health research agencies Throughout that period however the Rockefeller Institute later University has given high priority to the challenges of parasitism corresponding during a formidable period with Dr Trager's own career The present work then is a distillation of the insight collected by our principal doyen of parasite biology informed but by no means confined to his own research It is addressed to the reader of broad biological interest and training not to the specialist The disarmingly unpretentious style makes the work readily accessible to college undergraduates or even to gifted high school students but do not be deceived thereby as it has an enormous range of factual information and theoretical insight familiar to few but potentially important to most biologists

*Revival: Malaria (1989)* Mary M. Stevenson, 2017-11-22 The purpose of this book is to analyze and determine how a host responds to a blood stage malaria infection It focuses on strategies for anti malarial vaccination genetic control of host resistance to malaria and the contribution of the host genetic background to resistance or susceptibility to malaria This book is an important reference work for anyone who studies the field of microbiology immunology or parasitology
