Oxygen Transport to Tissue-V D. W. Lubbers, 2012-12-06 On the understanding that few people ever read the preface to any book and also on the understanding that even those few people who do read the preface realize that virtually nothing of any substance is ever said I shall write at such length as will be proportional to my expected readership The meetings of the International Society on Oxygen Transport to Tissue provide a forum for discussion amongst scientists who although being from very diverse and specialized backgrounds have tissue oxygenation as a unifying theme of interest The wide variety of research material presented in this volume and the multiplicity of the experimental techniques described should serve as an adequate gauge to the range of expertise and knowledge of the society's members Such diversity should also stress the importance of the need for multidisciplinary approaches to complex biological problems In attempting a fundamental characterization of a biological process such as tissue oxygenation the application of very many separate research skills are necessary such as mathematics engineering biophysics biochemistry physiology histology and clinical medicine The success of the ISOTT has and we hope will continue to be causing a combination of individuals to direct their specialized knowledge to the many facets of a single process tissue oxygenation Cumulated Index Medicus, 1994

Cortical NO interneurons from embryogenesis to functions Bruno Cauli, Yoshiyuki Kubota, Ludovic Tricoire, 2014-01-23 Neuronal processing and physiology rely on a delicate interplay between glutamatergic excitatory neurons and GABAergic inhibitory interneurons in a spatially temporally and cell type specific manner Understanding these processes is complicated further by the large diversity characterizing the cerebral cortex Although recent advances have significantly improved our knowledge of its neuronal types the identity and the roles of several subpopulations of GABAergic interneurons remain elusive Presumably because of their apparent paucity their diversity the highly labile nature of nitric oxide NO as well as its pleiotropic actions the functional importance of NO producing GABAergic interneurons is particularly enigmatic This Research Topic will cover the different aspects of cortical NO interneurons from their diversity embryonic origins to their functions in the cortical circuit and physiology **Primer on Cerebrovascular Diseases** Louis R. Caplan, Jose Biller, Megan C. Leary, Eng H. Lo, Ajith J Thomas, Midori Yenari, John H.
