Stability and Change in the Law of the Sea: The Role of the LOS Convention Alex G. Oude Elferink,2005-12-01

The adoption of the United Nations Convention on the Law of the Sea in 1982 has led to a period of relative stability in the law of the sea However especially in recent times there have also been calls to amend the Convention because of supposed shortcomings Renegotiation of the Convention in all probability would be a time consuming process the outcome of which is highly uncertain Such a process would almost certainly negatively impact upon international cooperation in the management of ocean space as it is bound to lead to uncertainty and conflict over the applicable legal regime This work looks at topics which can contribute to an understanding of how the Convention has been adapted to newly arising issues and how further adaptation may be achieved in the future without a readjustment of the basic legal framework contained in the Convention Issues reviewed are the question to what extent the Convention provides a constitution for the oceans the roles of the UN General Assembly and the Meeting of States Parties to the Convention in reviewing its implementation the impact of state practice on the Convention and vice versa and the significance of the formal amendment procedures and other mechanisms to adapt the Convention to changed circumstances

Operational Oceanography in the 21st Century Andreas Schiller,Gary B. Brassington,2011-04-11

Over the past decade the significant advances in real time ocean observing systems ocean modelling ocean data assimilation and super computing has seen the development and implementation of operational ocean forecast systems of the global ocean At the conclusion of the Global Ocean Data Assimilation Experiment GODAE in 2008 ocean analysis and forecasting services were being supported by 12 international centres This book is about ocean forecasting a maturing field which remains an active area of research and includes such topics as ocean predictability observing system design high resolution ocean modelling and ocean data assimilation It presents the introduction to ocean forecasting which provides a foundation for new opportunities in areas of coupled bio geochemical forecasting and coupled

atmosphere wave ocean forecasting The book describes an updated account of research and development to improve forecast systems determining how best to service the marine user community with forecast information as well as demonstrating impact to their applications It also discusses operational centres that are now supporting a range of real time ocean services including online graphical and data products for their user communities and their feedback on the quality of information The contents of this book are aimed at early career scientists and professionals with an interest in operational oceanography and related ocean science There are excellent opportunities for exciting careers in the emerging field of operational oceanography in order to address current and future challenges as well as provide the supporting services to a rapidly growing user community An Ocean Blueprint for the 21st Century United States. Global Ecodynamics Kirill Y. Kondratyev,Vladimir F. Krapivin,V. P. Savinykh,Costas A. Varotsos,2012-12-06 During recent decades the stirring up of the processes of globalization practically in all spheres of present day civilization activities has aggravated and brought forth numerous problems resulting from the nature society N S interaction It has become apparent that to solve these problems it is necessary to develop new concepts and approaches to the interpretation of global environmental changes that would enable one to select the first priority directions in studies and to reliably assess the state of the nature society system NSS One of these priorities is to predict global climate change The growing interest in the problem of global climate change determined by its practical importance and by available contradictory estimates of the anthropogenic contribution to climate change necessitates a systematization of knowledge of and data on the observed climate change and causes of this change Despite an enormous amount of projects and programmes of studies of past and present climatic trends the problem of reliable prediction of future climate change remains far from being solved Emissions to the atmosphere of greenhouse gases GHGs mainly carbon dioxide is considered as one of the main causes of an expected climate warming resulting in sufficiently negative consequences for humankind Therefore an attempt has been made in this book to construct a formalized technology to assess the level of the greenhouse effect due to anthropogenic sources of carbon dioxide as well as the effects of other gas components **Energy Security for the 21st Century** Anco S.

Blazev,2021-01-14 This book takes a very close look at energy and energy security from a hands on technical point of view with an ultimate goal of sorting out and explaining the deep meaning of energy as well as the key factors and variables of our

Ecosystems Alida Bundy, Marta Coll, Stefan Koenigstein, Susa Niiranen, Maria Grazia Pennino, Paul E. Renaud, Jamie C. Tam, Morgane Travers-Trolet, 2021-11-29 **New Chances and New Responsibilities in the Arctic Region** Georg Witschel, 2010-01-01 Hauptbeschreibung The Arctic in the 21st century is exposed to multiple challenges Global warming will have far reaching repercussions and thus will open up new opportunities The melting of the ice enables the exploitation of resources and the use of new shipping routes which were not accessible up to now However these opportunities require new responsibilities which have to be taken seriously These developments in the Arctic partake an increasing position in the international environmental discussion The present book contains a comprehensive analysis of the current problems

Global Environmental Change Kirill Y. Kondratyev, Vladimir F. Krapivin, Gary W. Phillipe, 2013-06-29 The growing number of published works dedicated to global environmental change leads to the realization that protection of the natural environment has become an urgent problem The question of working out principles of co evolution of man and nature is being posed with ever increasing persistence Scientists in many countries are attempting to find ways of formulating laws governing human processes acting on the environment Numerous national and international programs regarding biosphere and climate studies contribute to the quest for means of resolving the conflict between human society and nature However attempts to find efficient methods of regulating human activity on a global scale encounter principal difficulties The major difficulty is the lack of an adequate knowledge base pertaining to climatic and biospheric processes as well as the largely incomplete state of the databases concerning global processes occurring in the atmosphere in the ocean and on land Another difficulty is the inability of modern science to formulate the requirements which must be met by the global databases necessary for reliable evaluation of the state of the environment and forecasting its development for sufficiently long time intervals *Future Roles and Missions of the United States Navy and Marine Corps* United States. Congress. House.

Committee on Armed Services. Seapower and Expeditionary Forces Subcommittee, 2010 **Climate and Geo-Sciences** A.L. Berger, S. Schneider, J.-Cl. Duplessy, 2012-12-06 It has been widely recognized recently that in order to make scientific progress on large and important problems eg carbon dioxide effects on climate viability of various sites for nuclear waste disposal etc it is necessary to integrate knowledge from wide ranging sets of disciplines This is certainly true in the climate sciences for progress in understanding the cause of the ice ages or the effects of industrial pollution on the future climate or even the likelihood of severe climatic consequences in the aftermath of nuclear war All require state of the art input from many geoscience disciplines climatology oceanography meteorology chemistry ecology glaciology geology astronomy space technology computer technology mathematics etc Major international meetings have called for interaction of such geoscience disciplines to solve real world problems To move beyond the rhetorical level the NATO Special Programme on Global Transport Mechanisms in the Geo Sciences whose activities started in 1983 decided to organise his closing symposium on such a topic which focus on the relationship between climate and geo sciences This symposium was held at the end of May

1988 at the Universite Catholique de Louvain Louvain la Neuve Belgium One hundred and thirty participants from the 16 NATO countries and a number of non NATO countries assembled for the Symposium Another feature was the attendance by special invitation of 16 promising young scientists who might well become leading scientists on climate and geo sciences in their respective countries in the next century *Cooperative Development in the South China Sea* Huaigao Qi, Song Xue, 2020-10-28 Boundary disputes in the South China Sea have been a long standing threat to peace and security in East and Southeast Asia Without agreed definition of boundaries provisional arrangements to develop resources in the disputed area have become the favored and most effective solution Therefore joint development between various countries has taken place in the form of ad hoc arrangements with the goal of achieving positive outcomes for all parties involved Incorporating insights from ten authors from six countries Brunei China Indonesia Malaysia the Philippines and Vietnam this book provides a comprehensive analysis of the incentives and policies to joint development in the South China Sea disputes The authors also discuss the bottlenecks and proposed policy options The authors ease doubts over joint development in South China Sea disputes and shed light on creative ways to promote cooperation The book is a key reference for students and scholars in politics and international relations Asian Studies and maritime law **China-EU Relations in a New Era of Global Transformation** Li Xing, 2021-06-14 This book draws together leading experts to examine the key issues in China EU relations China EU relations are increasingly complex and affected by a number of inter related factors such as China's global rise growing China US strategic competition US global withdrawal the transatlantic split the China Russia comprehensive alliance and Brexit The book highlights the struggles of both China and the EU to look for a dynamic and durable mode of engagement in an attempt to achieve the balance between opportunities and challenges and between partnership and rivalry International contributors explore how to conceptualise China EU relations and identify their differences and commonalities such as the EU's role in China's foreign policy process and how the EU works with China as a strategic partner Finally it analyses China's and the EU's perceptions of their own present and future roles Shedding light on the perspectives of understanding and change in China EU relations and its impact on multilateralism it will appeal to researchers and professionals working in International Relations International Political Economy and area studies who are interested in the rise of emerging powers and the changing world order Congressional Record United States.
