Francisco Mantovani, Andrzej Kus, 2004-06-22 A masterly survey of the last 13 years of Very Long Baseline Interferometry reviewed in light of the most advanced astronomical observations Topics covered include Nonthermal emission from extragalactic radio sources Principles of synchrotron emission in relation to astrophysics Theory of relativistic jets Young powerful radio sources and their evolution Scintillation in extragalactic radio sources Radio and optical interferometry Radio polarimetry Unified schemes Deep fields Tropospheric and ionospheric phase calibration Supernovae VLBI for geodesy and geodynamics Astrophysics, Astronomy and Space Sciences in the History of the Max Planck Society Luisa Bonolis, Juan-Andres Leon, 2022-12-05 This book provides the first comprehensive historical account of the evolution of scientific traditions in astronomy astrophysics and the space sciences within the Max Planck Society Structured with in depth archival research interviews with protagonists unpublished photographs and an extensive bibliography it follows a unique history from the post war relaunch of physical sciences in West Germany to the spectacular developments and successes of cosmic sciences in the second half of the 20th century up to the emergence of multi messenger astronomy It reveals how the Society acquired national and international acclaim in becoming one of the world s most productive research organizations in these fields **An Introduction to Distance Measurement in Astronomy**

Richard de Grijs, 2011-09-20 Distance determination is an essential technique in astronomy and is briefly covered in most textbooks on astrophysics and cosmology It is rarely covered as a coherent topic in its own right When it is discussed the approach is frequently very dry splitting the teaching into for example stars galaxies and cosmologies and as a consequence books lack depth and are rarely comprehensive Adopting a unique and engaging approach to the subject An Introduction to distance Measurement in Astronomy will take the reader on a journey from the solar neighbourhood to the edge of the Universe discussing the range of distance measurements methods on the way The book will focus on the physical processes discussing properties that underlie each method rather than just presenting a collection of techniques As well as providing the most compressive account of distance measurements to date the book will use the common theme of distance measurement to impart basic concepts relevant to a wide variety of areas in astronomy astrophysics The book will provide an updated account of the progress made in a large number of subfields in astrophysics leading to improved distance estimates

particularly focusing on the underlying physics Additionally it will illustrate the pitfalls in these areas and discuss the impact of the remaining uncertainties in the complete understanding of the Universes at large As a result the book will not only provide a comprehensive study of distance measurement but also include many recent advances in astrophysics The Rise of Radio Astronomy in the Netherlands Astrid Elbers,2016-11-23 Radio astronomy was born during the Second World War but as this book explains the history of early Dutch radio astronomy is in several respects rather anomalous in comparison to the development of radio astronomy in other countries The author describes how these very differences led the Netherlands to become one of the world leaders in radio astronomy Dominated by the Leiden astronomer Jan Hendrik Oort the field embarked on an era of success and to this day the country still holds a leading position To tell this story the book focuses on three key events in the period 1940 1970 namely the construction of the radio telescopes in Kootwijk 1948 in Dwingeloo 1956 and in Westerbork 1970 These projects show that Dutch radio astronomers must not be seen as merely scientists but also as strategic lobbyists networkers and organizers in a specific political and economic context It was in the process of planning designing and constructing these instruments that the interests of the astronomers industrial partners politicians and lobby groups merged to create today s existing research centers for radio astronomy **Relativistic Celestial**

Mechanics of the Solar System Sergei Kopeikin,Michael Efroimsky,George Kaplan,2011-10-25 This authoritative book presents the theoretical development of gravitational physics as it applies to the dynamics of celestial bodies and the analysis of precise astronomical observations In so doing it fills the need for a textbook that teaches modern dynamical astronomy with a strong emphasis on the relativistic aspects of the subject produced by the curved geometry of four dimensional spacetime The first three chapters review the fundamental principles of celestial mechanics and of special and general relativity This background material forms the basis for understanding relativistic reference frames the celestial mechanics of N body systems and high precision astrometry navigation and geodesy which are then treated in the following five chapters The final chapter provides an overview of the new field of applied relativity based on recent recommendations from the International Astronomical Union The book is suitable for teaching advanced undergraduate honors programs and graduate courses while equally serving as a reference for professional research scientists working in relativity and dynamical astronomy The authors bring their extensive theoretical and practical experience to the subject Sergei Kopeikin is a professor at the University of Missouri while Michael Efroimsky and George Kaplan work at the United States Naval Observatory one of the world s premier institutions for expertise in astrometry celestial mechanics and timekeeping

Mueller, Barbara Kolaczek, 2013-12-01 In this review talk I would like to report on the proper motion analysis which has been recently carried out together with M Soma and M Yoshizawa There has been a persistent demand in astronomy for accurate stellar positions and proper motions which are represented by an inertial reference system constructed on the basis of a set of consistent astronomical constants In the reference system the precessional constant plays a primary role In a series of papers Fricke 1967a b 1977a b has determined the luni solar precessional correction to Newcomb's value and the fictitious motion of the equinox which have been adopted in the IAU 1976 System of Astronomical Constants Based on the precessional correction and the equinoctial motion thus established the fundamental reference system the FK5 system Fricke et al 1988 for positions and proper motions has been constructed However for several years geodetic VLBI McCarthy Luzum 1991 and LLR Williams et al 1991 observations have been suggesting an additional correction to the luni solar precessional constant of the IAU 1976 System That is these observations indicate the precessional correction of 6 p 0 30 cent to the FK5 system But the observational period of the earth orientation is considered to be still insufficient to separate unambiguously the precessional change of the earth orientation from the nutation with the longest period of 18 6 years **Astrometry for**

Contributions of Space Geodesy to Geodynamics David E. Smith, Donald L. Turcotte, 1993-01-11 Published by the American Geophysical Union as part of the Geodynamics Series Volume 24 There are times in the history of a science when the evolving technology has been combined with a singleness of purpose to make possible the next great step For space geodesy the decade of the 1980s was one of those times Initiated in the early 1980s the NASA Crustal Dynamics Project CDP a global venture of unprecedented proportions exploited new technologies to confirm and refine tectonic theories and to advance geodynamics The highlights of the efforts of scientists and engineers from some 30 countries are contained in the 54 papers collected in three volumes which are dedicated to the memory of Edward A Ted Flinn the former Chief Scientist of the NASA Geodynamics Program

Very Long Baseline Interferometry Marcello Felli, Ralph E. Spencer, 1989-07-31 The quest for high resolution has preoccupied radio astronomers ever since radio waves were first detected from space fifty years ago This venture was particularly stimulated by the discovery of quasars and led to the development of interferometer techniques using baselines of transglobal dimensions These methods have become known as Very Long Baseline Interferometry VLBI Arrays of radio telescopes situated all over the Earth or even in space are regularly used for researches in radio astronomy reaching resolutions as small as a fraction of a milli arcsecond The technique also allows the measurement of the positions of the radio telescopes to a few millimeters and so VLBI has become a major tool in geodesy and the study of the rotation of the

Earth VLBI has now passed the pioneer stage and is becoming a standard facility available to astronomers and geodesists requiring the coordination of the operations of independently owned radio telescopes around the world In Europe observatories from England Federal Republic of Germany France Italy Poland Sweden and The Netherlands are coordinated in their VLBI activity by the European VLBI Network Consortium EVN The Programme Committee of the EVN allocates time to scientific projects on a routine basis three times a year The United States has a similar arrangement of a network of independent radio observatories and joint experiments using Global Network are often made
