Anya H. King

Scented Ape The Biology And Culture Of Human Odour:

The Scented Ape David Michael Stoddart,1990-11-29 Both men and women devote time and effort to removing natural body odour and replacing it with sexual attractant odours derived from plants and animals we seem to need to smell of something other than people Yet of all the apes we are the most richly endowed with scent producing glands This book examines the sense of smell in humans comparing it with the known functions of the same sense in other animals Odorous cues play a role in sexual physiology and behaviour in animals and there are claims that odour can play the same role in humans The place of odours and scents in aesthetics and in psychoanalysis serves to illustrate the link between the emotional centres and the brain The book presents arguments to explain the way in which our ancestral past has given rise to our modern day olfactory enigmas The material is presented with as much explanation of the technical detail as possible to make the book accessible to a wide readership

Scent from the Garden of Paradise. Musk and the Medieval Islamic World Anya H. King,2017-01-09 Since antiquity musk has been a valued perfume and medicine Because the musk deer only lives in Central Eurasia people in other locations had to trade for its musk For medieval Islamic civilization musk became the most important of all aromatics The musk trade thus illuminates the nature of medieval Asian trade and musk s cultural effects on the Islamic world Scent from the Garden of Paradise Musk and the Medieval Islamic World examines the history of musk from its origins in Asia to its uses in the medieval Middle East surveys the Islamic literature on musk and discusses the roles of musk in perfumery and medicine as well as the symbolic importance of musk in Islam

Oxford Handbook of Evolutionary Psychology Robin Ian MacDonald Dunbar,Louise Barrett,2007 The Oxford Handbook of Evolutionary Psychology is the definitive comprehensive and authoritative text on this burgeoning field With contributions from over fifty experts in the field the range and depth of coverage is unequalled It will be an essential resource for students and researchers in psychology

Evolutionary Psychology Christopher Badcock,2013-05-31 Evolutionary Psychology A Critical Introduction According to evolutionary biologists we are the minders of our genes But as Christopher Badcock points out in this book it is only recently that evolutionists have realized that minders need minds and that evolution needs psychology to fill the yawning gap between genes and behaviour Evolutionary Psychology assumes no prior knowledge of the subject and concentrates on the fundamental issues raised by the application of modern Darwinism to psychology Basic concepts of evolution are explained carefully so that the reader has a sound grasp of them before their often controversial application to psychology is discussed The approach is a critical one and the author does not hide the many difficulties that evolutionary psychology raises Examples include the strange neglect of Darwin s own writings on psychology and the fact that no existing theory has succeeded in explaining why the human brain evolved in the first place The book is the first to give a non technical account of remarkable new findings about the roles that conflicting genes play in building different parts of the brain It is also the first to consider the consequences of this for controversies like those over nature nurture IQ brain lateralization and

consciousness Evolutionary Psychology is based on many years experience of teaching evolution and psychology to social science students and is intended for all who wish to get to grips with the basic issues of one of the most exciting and rapidly growing areas of modern science

Communicating Ruth Finnegan, 2005-06-29 In *Communicating* the anthropologist Ruth Finnegan considers the many and varied modes through which we humans communicate and the multisensory resources we draw on The book uncovers the amazing array of sounds sights smells gestures looks movements touches and material objects which humans use so creatively to interconnect both nearby and across space and time resources consistently underestimated in those western ideologies that prioritise rationality and referential language

Living machines Tony J. Prescott, Nathan Lepora, Paul F. M. J Verschure, 2018-04-19 Contemporary research in science and engineering is seeking to harness the versatility and sustainability of living organisms By exploiting natural principles researchers hope to create new kinds of technology that are self repairing adaptable and robust and to invent a new class of machines that are perceptive social emotional perhaps even conscious This is the realm of the living machine Living machines can be divided into two types biomimetic systems that harness the principles discovered in nature and embody them in new artifacts and biohybrid systems in which biological entities are coupled with synthetic ones Living Machines A handbook of research in biomimetic and biohybrid systems surveys this flourishing area of research capturing the current state of play and pointing to the opportunities ahead Promising areas in biomimetics include self organization biologically inspired active materials self assembly and self repair learning memory control architectures and self regulation locomotion in air on land or in water perception cognition control and communication Drawing on these advances the potential of biomimetics is revealed in devices that can harvest energy grow or reproduce and in animal like robots that range from synthetic slime molds to artificial fish to humanoids Biohybrid systems is a relatively new field with exciting and largely unknown potential but one that is likely to shape the future of humanity This book surveys progress towards new kinds of biohybrid such as robots that merge electronic neurons with biological tissue micro scale machines made from living cells prosthetic limbs with a sense of touch and brain machine interfaces that allow robotic devices to be controlled by human thought The handbook concludes by exploring some of the impacts that living machine technologies could have on both society and the individual exploring questions about how we will see and understand ourselves in a world in which the line between the natural and the artificial is increasingly blurred With contributions from leading researchers from science engineering and the humanities this handbook will be of broad interest to undergraduate and postgraduate students Researchers in the areas of computational modeling and engineering including artificial intelligence machine learning artificial life biorobotics neurorobotics and human machine interfaces will find Living Machines an invaluable resource
