Offshore Tidal Sands A. H. Stide, 2012-12-06 In the early 1970s a start was made on a broad review of what was known or could be surmised about sedimentation by strong tidal currents on modern continental shelves This task was initiated because of the need to define the next phase of research in this field by the Marine Geology Group of the Institute of Oceanographic Sciences Related indications of the longer term evolution of the deposits were sought by close reference to the nature of modern tidal currents and the supposedly offshore tidal deposits of ancient seas As the review grew in completeness it became of increasing relevance to a wider audience so it was amalgamated with the new results and shaped as a book The fruits of the long continued discussions within and outside the Geology Group have served to improve understanding of the processes and products of offshore tidal current sedimentation On the other hand the discussions have blurred the parts played by the people concerned This applies to all chapters in varying degrees but is especially true for Chapters 3 4 and 5 The authorship attributed to each chapter therefore seeks to reflect those who were most concerned with it

Ecology of Marine Ports of the Black and Azov Sea Basin A. K. Vinogradov, Yu. I. Bogatova, I. A. Synegub, 2017-08-18 This work examines the waters of marine ports as unique integrated aquatic ecosystems It regards marine ports as entities comprising components of natural and anthropogenic origin including pelagic periphytal and benthic subsystems Using selected Black and Azov Sea ports as examples the book discusses the hydrodynamics and water exchange which are weakened in ports compared with open coastal zones It reflects consequences of the presence of hydrobionts and the accumulation of organic matter which are promoted by the variety of hard substrata and the absence of fishery The book is divided into five main chapters The first chapter describes the general characteristics of the marine ports at the northern coast of the Black and Azov Seas and their shipping channels Chapters 2 to 4 discuss the main abiotic and biotic peculiarities of the pelagic periphytal and benthic subsystems of those marine ports and chapter 5 deals with trophodynamic processes in their ecosystems A concluding section reflects recommendations how the ecosystems of ports in non tidal seas may be ameliorated

Since its development in the early 1990s, UHPC has attracted great interest worldwide due to its advantages. This book covers material selection and mixture design methods for developing UHPC as well as the performance of UHPC including fresh and hardened properties, setting and hardening, dimensional stability, static and dynamic properties, durability, long-term properties and self-healing properties. A range of potential applications and case studies are presented to illustrate how UHPC meets requirements for lightweight, high-rise, large-span, heavy-load bearing, fast construction and highly durable structures in civil and construction engineering. Also introduced is a typical new concrete: seawater sea sand UHPC, which avoids the use of freshwater and river sand in marine construction. The first book to fully cover the design, performance and applications of UHPC, this is ideal for concrete technologists, designers, contractors and researchers.
