and maritime activities should be managed from a national and international perspectives It is widely known that currently the planet is suffering a global change and it is also affecting the Alboran Sea its ecosystems and populations An important first step to update a paramount vision on this region is to understand the climatic geologic and oceanographic including biochemical cycles process which shapes the rich geodiversity biodiversity the productivity and the sustainable use of the marine resources from Alboran Sea The fisheries management system should take into account marine environmental variability to achieve biological sustainability of marine resources Well funded policy makers decisions require a sound science based knowledge of the interaction between the marine environment and commercial stocks This is because the role of marine environment in the evolution of fish stocks is sometimes even more important than the one played by fishers in the commercial exploitation of them Finally we should analyze the different aspects of political context that could affect the management of the resources from Alboran Sea in the context of climate change This book reviews different aspects of the Alboran Sea to help understand the current situation from the original Tethys Ocean The book is divided into four blocks i Oceanographic geological and ecological context chapters 2 to 7 ii biodiversity and ecosystems distribution chapters 8 to 12 iii fisheries resources and aquaculture chapters 13 to 20 and iv conservation management and marine policies chapters 21 to 25

Identification Guide of Freshwater Macroinvertebrates of Spain Javier Oscoz, David Galicia, Rafael Miranda, 2011-06-27

As a result of the European Commission's concern for the status of continental waters and as a clear reflection of the notion of water as heritage to be conserved in the year 2000 the Water Framework Directive 2000/60/CE was enacted its goal being to establish a framework to protect water and the different aquatic ecosystems by requiring the Member States to achieve a good ecological status in all their waters by 2015 Like all ecosystems freshwater ecosystems undergo physical chemical and energy related changes both of natural and anthropogenic origin These disturbances affect the organisms living in them and those who utilize their resources Therefore evaluating these changes has become a very important task in order to better understand aquatic systems The study and analysis of the ecological status of these ecosystems in relation to their conservation status and water quality is thus a fundamental tool for a more efficient and rational management of their resources that is a management that does not threaten the ecosystem The present guide for the identification of Spanish freshwater macroinvertebrates aims to facilitate the job of those who go to great lengths to identify them in order to then determine biotic indices It is not the aim of this book to serve as a zoological treaty nor does it claim to add new information on the biology or the ecology of the taxa covered This book is simply a working tool explicitly designed to facilitate the identification of the Spanish macroinvertebrates and the subsequent computing of biotic indices
