World ,1929 What the Wild Sea Can Be Helen Scales,2024-07-16 The acclaimed marine biologist and author of *The Brilliant Abyss* examines the existential threats the world's ocean will face in the coming decades and offers cautious optimism for much of the abundant life within. No matter where we live we are all ocean people. Helen Scales emphatically observes in her bracing yet hopeful exploration of the future of the ocean. Beginning with its fascinating deep history, Scales links past to present to show how the prehistoric ocean ecology was already working in ways similar to the ocean of today. In elegant evocative prose she takes readers into the realms of animals that epitomize today's increasingly challenging conditions. Ocean life everywhere is on the move as seas warm and warm waters are an existential threat to emperor penguins whose mating grounds in Antarctica are collapsing. Shark populations critical to balanced ecosystems have shrunk by 71 per cent since the 1970s, largely the result of massive and oft-unregulated industrial fishing. Orcas, the apex predators, have also drastically declined, victims of toxic chemicals and plastics with long half-lives that disrupt the immune system and the ability to breed. Yet despite these threats, many hopeful signs remain. Increasing numbers of no-fish zones around the world are restoring once-diminishing populations. Amazing seagrass meadows and giant kelp forests rivaling those on land are being regenerated and expanded. They may be our best defense against the storm surges caused by global warming while efforts to reengineer coral reefs for a warmer world are growing. Offering innovative ideas for protecting coastlines and cleaning the toxic seas, Scales insists we need more ethical and sustainable fisheries and must prevent the other existential threat of deep-sea mining, which could significantly alter life on earth. Inspiring us all to maintain a sense of awe and wonder at the majesty beneath the waves, she urges us to fight for the better future that still exists for the Anthropocene ocean.

RSPB Spotlight: Otters Nicola Chester,2016-07-28 Each Spotlight title is carefully designed to introduce readers to the lives and behaviour of our favourite birds and mammals. *Otters* by Nicola Chester is an accessible and lively account of an intriguing and much-loved animal that surprisingly is still endangered and rarely seen despite a recent resurgence that has seen it expand from the remote countryside into our cities. Nicola's charming informed text brings this elusive and exciting mammal into sharper focus, revealing what an otter is and how they live, feed, play and breed. Nicola reflects on how otters exist in our imaginations culturally and how that has changed over the years. She also examines the many challenges otters have faced, exposing what brought them to the brink of extinction and explores the challenges we face in trying to find and watch otters in the wild.

Analysis of vertebrate predator-prey community Vadim Sidorovich,2011-09-01 This monograph is about predation in vertebrate animal community. The studies were done in the seminatural terrains with transitional mixed forest within the European forest zone in Belarus. The result part was organised as a top-down flow. First, the community characteristics related to predators were estimated. I presented data on

predator species richness population density and biomass with special attention paid to the changes in predator species diversity occurred during the last two centuries and particularly in connection with the American mink and raccoon dog naturalization Then the main features of predator food niches were given and the structure of various predator guilds and size structure in predators were analysed The next part of the monograph was devoted to examining of community important factors acting in semi natural terrains Such factors affected either the whole community or its marked fragment The last quite a large part of the monograph consisted of many chapters which present more or less essential results on different predator species and stresses hot questions of their population ecology
