D. Mielenz, R. A. Velapoldi, Radu Mavrodineanu, 1976 Volume 25: Optical Methods of Investigating Solid Bodies D. V. Skobel tsyn,2013-04-17 The principal results of the work are as follows 1 A simplified technique was devised for obtaining Raman spectra of powders 2 The Raman and infrared absorption spectra of the following oxides were investigated AsP3 SbP3 As 0 SbP5 Te02 Ge02 two forms in the crystalline state and ASP3 Ge02 Te0 in the glassy state 2 5 2 3 The vibrational spectra of the crystalline and glassy forms of the oxides ASP3 Ge02 Te02 are similar in many main respects indicating a similarity of their structural units which determine the vibrational spec tra of these substances 4 By a study of the vibrational spectrum it was shown that arsenious anhydride has a molecular structure and consists of As0 molecules having symmetry of the point group Td The force constants and vibration fre 4 6 quencies of the As 0 molecule were calculated and the vibrational spectrum of arsenious anhydride was re 4 6 liably interpreted with the aid of these results 5 A similar result was obtained for antimonous anhydride consisting of Sb0 molecule s with symmetry 4 6 ofthe point group Td The force constants for this molecule were found and the vibrational spectrum was calculated Spectroscopy of Crystals Containing Rare Earth Ions A.A. Kaplyanskii, R.M. McFarlane, 2012-12-02 Spectroscopy of Crystals Containing Rare Earth Ions contains chapters on some key problems selected from a broad range of spectroscopic studies of RE activated solids including both crystalline and glassy materials Progress in crystal field theory is surveyed an area which is basic to our understanding of the energy levels The treatment of dynamical properties includes studies of coherence phenomena in isolated ions energy transfer between ions and co operative phenomena associated with ion ion and ion lattice interactions In addition the role of electron spins and nuclear spins is studied by light scattering and double resonance techniques. The presence of inhomogeneous broadening of spectral lines is observed and studied in many contexts leading to new insights into general problems of the disordered state Considerable attention is devoted to describing new experimental techniques whose development is of prime importance for progress in the spectroscopy of RE activated solids Many of these rely on the development and application of tunable lasers At the moment this is a very active field of spectroscopy with more exciting developments likely to occur in the future

Materials of Gold(I) Complexes with Stimuli-Responsive Properties Mingoo Jin,2020-04-18 This book highlights and investigates novel solid state luminescent properties of crystals with stimuli responsive behavior Several novel molecular designs for controlling crystal structures with photo physical properties are described with a special focus on external stimuli responsive properties The major goal of the material design concept was to capitalize on the chirality of crystals with stimuli responsive properties To allow crystals chirality to be controlled and modified by means of external stimulation the axial chirality of biaryl moiety was employed and interestingly produced several novel mechano and vapo responsive luminescent properties based on crystal to crystal or single crystal to single crystal phase transitions In addition the book details how the molecular rotation of luminophores in the solid phase can be used to achieve corresponding thermal responsive phosphorescence The reports presented here illustrate how the author has succeeded in controlling structural factors in a bulk environment by using molecular design with linking to photo physical properties The content will be of great interest to researchers in the field and to members of chemical and material science societies Optics and Spectroscopy ,1994
