Far Side of the Moon Charles Byrne, 2007-10-23 The nature of the far side of the Moon has always been a mystery Throughout human history the far side of the Moon has been so near its presence so obvious and yet so hidden It was only in the decade of the 1960s that we have been able to observe it as opposed to inferring its existence I have been fortunate to live during the period when the far side became visible and has been extensively examined by means that were not even known 50 years ago During this time we have learned much but of course we have asked new questions about secrets still hidden on the Moon Some of these secrets will be revealed in the course of future exploration and robotic spacecraft missions This book is about what we now know of the far side of the Moon about what the current questions are and about some possible answers It is a companion book to The Lunar Orbiter Photographic Atlas of the Near Side of the Moon my first book Byrne 2005 also published by Springer in 2005 Together these books cover the entire Moon in photographs taken by the robotic spacecraft that have done much of their work behind the Moon out of communication with Earth for half of their orbital periods The photographs of the near side book were taken by a single mission of the Lunar Orbiter project Lunar Orbiter 4 that was flown in 1967 **The Chang'E-1 Topographic Atlas of the Moon** Chunlai Li, Jianjun Liu, Lingli Mu, Xin Ren, Wei Zuo, 2015-12-03 This atlas is based on the lunar global Digital Elevation Models DEM of Chang E 1 CE 1 and presents CCD stereo image data with digital photogrammetry The spatial resolution of the DEM in this atlas is 500m with horizontal accuracy of 192m and vertical accuracy of 120m Color shaded relief maps with contour lines are used to show the lunar topographical characteristics The topographical data gathered by CE 1 can provide fundamental information for the study of lunar topographical morphological and geological structures as well as for lunar evolution research **High**

Early Exploration of the Moon Tom Lund, 2018-12-26 Luna 2 launched by the USSR in 1959 was the first spacecraft from Earth to land on the moon That first voyage was followed by increasingly capable lunar exploration spacecraft from Russia and the United States A total of 36 successful lunar exploration missions were conducted from 1959 to the last Apollo manned exploration in 1972 and the final travels of the Lunokhod lunar rover in 1973 Of all the missions that of Apollo 17 was the pinnacle of manned space exploration Apollo 17 astronauts traveled 21 miles on the lunar surface in a dune buggy type vehicle stopping frequently to explore and gather samples The spacecraft that enabled lunar exploration were ingenious

and reflected the best efforts of talented people working with the technology of the day This book showcases the engineering involved in those incredible machines The spacecraft covered and their missions are listed below From the United States Ranger Photography en route to lunar impact Lunar Orbiter Photography of front and back side of moon Surveyor Soft landing photography and soil analysis Apollo Manned exploration Lunar Rover expanded range From the USSR Luna 2 Photography en route to lunar impact Luna 3 Photography of back side of moon on flyby Luna 9 and 13 Soft landing photography and soil analysis Luna 10 11 12 14 Photography from lunar orbit Luna 16 20 24 Soft landing return of soil sample to Earth Lunokhod 1 2 Lunar roving vehicle driven from Earth L1 Planned manned lunar flyby but only flew unmanned L3 Planned manned lunar landing but never flew to moon To tell the story of these spacecraft Tom Lund draws on over 40 years work on aircraft and spacecraft systems He was technical lead for the landing radars for the Surveyor and Apollo spacecraft and his practical experience is augmented by master s degrees in electrical engineering physics and business administration

Selene's Two Faces ,2018-08-13 If any scientific object has over the course of human history aroused the fascination of both scientists and artists worldwide it is beyond doubt the moon The moon is also by far the most interesting celestial body when it comes to reflecting on the dualistic nature of photography as applied to the study of the universe Against this background Selene s Two Faces sets out to look at the scientific purpose aesthetic expression and influence of early lunar drawings maps and photographs including spacecraft imaging In its approach Selene s Two Faces is intermedial intercultural and interdisciplinary It brings together not only various media photography maps engravings lithographs globes texts and cultures from Europe America and Asia but also theoretical perspectives See inside the book
