Handbook of Vertebrate Immunology Paul-Pierre Pastoret, 1998-06-02 This unique book provides a comprehensive and comparative guide to the immune systems of major vertebrate species including domestic and wild animals of veterinary or medical interest fish and amphibia Data in this essential reference work has been compiled by world renowned editors and an international group of authors For each species the information is presented in a structured user friendly format allowing easy cross reference and comparison between the various species This book will be considered the definitive reference work on vertebrate immunology and will be essential for scientists and professionals working in Immunology Vaccinology or with Animal Models for students of Veterinary or Human Medicine Biology and researchers in Comparative Medicine and Physiology Each section devoted to a major animal group covers Lymphoid organs and their anatomical disposition Leukocytes and their markers Leukocyte traffic and associated molecules Cytokines T cell receptors Immunoglobulins MHC antigens Ontogeny of the immune system Passive transfer of immunity Neonatal immune responses Non specific immunity Complement system Mucosal immunity Immunodeficiencies Tumours of the immune system Autoimmunity

Cell-Mediated Immunity in Ruminants Bruno M. L. Goddeeris, William I. Morrison, 1994-02-28 Within the last 10 years the immune system of ruminants especially T cells and their interactions with other cells has been an important topic of study for veterinary immunologists and an area of interest for medical and fundamental immunologists This book brings together all the latest data on ruminant cell mediated immunology In the first half of the book leukocytes and their membrane molecules and cytokines are reviewed Markers tissue distribution functional characterization ontogeny cytokines and histocompatibility are covered in depth in separate chapters In the second half of the book cell mediated immune responses against infectious diseases such as East Coast fever infectious bovine rhinotracheitis foot and mouth disease maedi visna and gastrointestinal nematodes are analyzed The application of cytokines to ruminants against infectious diseases is also reviewed

Immunological Recognition of Peptides in Medicine and Biology N. D. Zegers, W.J.A. Boersma, Eric Claassen, 1995-07-19 Immunological Recognition of Peptides in Medicine and Biology gives a state of the art overview on the use of peptides and peptide ligand interactions and the critical role they play in recognition patterns for the regulation of various biological functions A wide range of applications are discussed including some experimental preclinical ones such as epitope mapping peptide libraries and production of amino acid specific antibodies and their therapeutic use in oncology and infectious disease vaccines Each chapter also includes step by step protocols to aid in actual experiments

Several alternative techniques and strategies are discussed by different authors offering the reader an opportunity to select the most favorable application for a specific biological problem

Basic Mechanisms of Physiologic and Aberrant Lymphoproliferation in the Skin W.Clark Lambert,Benvenuto Giannotti,Willem A. van Vloten,2012-12-06 This book is based upon a series of papers originally presented at a NATO Advanced Studies Workshop of the same title held at the study Center HI Cappuccini a converted monastery in San Miniato a small village located between Pisa and Florence Italy in October 1991 Authors were asked to submit their completed chapters by the following February these were then scanned onto computer disks edited and returned to the authors for final revision and updating with a final deadline of February 1993 The authors were encouraged to make whatever modifications they wanted especially regarding updating their chapters with an eye to making the final product both comprehensive and current In this we succeeded beyond our expectations with most chapters extensively altered and many completely re written and significantly expanded Thus although the original meeting was held in 1991 the chapters in this volume may be regarded as current from at least February 1993 with some of the final updated revisions received as late as July 1993 This book as agreed in our original contract has been delivered to the publisher camera ready This means that all of the scanning editing

proofing and typesetting were done here by the office of the Department of Dermatology at the New Jersey Medical School. We essentially produced the book which the publisher for the most part then photocopied. This has been an enormous burden borne mainly by my colleague in this division Robert A. *Advances in Mucosal Immunology* Jiri Mestecky, Michael W. Russell, Susan Jackson, Suzanne M. Michalek, Helena Tlaskalová-Hogenová, Jaroslav Sterzl, 2013-04-17. The Seventh International Congress of Mucosal Immunology held in Prague, the beautiful old capital of The Czech Republic, 16-20 August 1992, was the first to be sponsored by the Society for Mucosal Immunology and was the largest since their inception 20 years earlier in Birmingham, Alabama. It was attended by 624 participants who gave 538 presentations, more than 10 times the numbers of the first meeting. These proceedings contain 354 papers that were submitted for publication. The political events in Europe that made it possible to hold this Congress in Prague also allowed for the first time the participation of large numbers of scientists from Eastern Europe as well as from Asia, and the organizers were truly gratified by this happy circumstance. It is now clear not only that mucosal immunity encompasses the huge area of mucosal surfaces and most physiological organ systems but also that mucosal immunology extends over the whole global surface and all continents. The sheer size of the Congress and number of manuscripts unfortunately entailed some unexpected problems in editing and assembling the proceedings, partly due to the diversity of linguistic styles not represented at earlier meetings, and we apologize to the authors who have patiently awaited the publication of their contributions.

Thomas' Hematopoietic Cell Transplantation, 2 Volume Set Stephen J. Forman, Robert S. Negrin, Joseph H. Antin, Frederick R. Appelbaum, 2016-12-27. Fully revised for the fifth edition, this outstanding reference on bone marrow transplantation is an essential field-leading resource. Extensive coverage of the field from the scientific basis for stem cell transplantation to the future direction of research. Combines the knowledge and expertise of over 170 international specialists across 106 chapters. Includes new chapters addressing basic science experiments in stem cell biology, immunology, and tolerance. Contains expanded content on the benefits and challenges of transplantation and analysis of the impact of new therapies to help clinical decision making. Includes a fully searchable Wiley Digital Edition with downloadable figures, linked references, and more. References for this new edition are online only, accessible via the Wiley Digital Edition code printed inside the front cover or at www.wiley.com/go/forman_hematopoietic.

Dynamics of the IL-2 Cytokine Network and T-cell Proliferation Dorothea Busse, 2010. This book adds to an intensively investigated question of immunological research: How do regulatory T cells mediate their function to ensure tolerance against self-antigen? The author analyzes the interaction via the cytokine interleukin 2 between T helper cells, which mediate immune responses, and regulatory T cells. Since both cell types depend on interleukin 2 to mediate their functions, competition for interleukin 2 is likely. A mathematical model is developed to describe the interaction. This model focuses on the interleukin 2 receptor dynamics on helper and regulatory T cells and the extracellular interleukin 2 diffusion. The interleukin 2 receptor

dynamics is governed mainly by an autocrine positive feedback loop on both cell types. However its differential regulation results in a switch like up regulation of the receptors on T helper cells and a gradual adaptation of the receptor levels to extracellular interleukin 2 supply on regulatory T cells. This difference enables regulatory T cells to efficiently compete for interleukin 2 and deprive T helper cells of their growth factor. Cell culture experiments verify these findings. It can be shown that the antigen stimulus and the intercellular distance are relevant control parameters for competition. Other mechanisms are described for suppression of T helper cell action by regulatory T cells. Competition for interleukin 2 may act in concert with them.

Immune Response and the Eye Jerry Y. Niederkorn, Henry J. Kaplan, 2007-01-01 In memory of J Wayne Streilein the pioneer in ocular immunology. The second edition of *Immune Response and the Eye* highlights recent insights into the dangerous compromise between the immune system and the eye which protects the eye against pathogens while limiting inflammation and immune mediated injury to ocular tissues with little or no regenerative potential. It discusses the broad spectrum of physiological immunological anatomical and biochemical adaptations that conspire to closely regulate the tone and tenor of immune responses in the eye. This volume further describes immune mediated diseases that occur when the compromise between the immune system and the eye is breached. This breakdown in immune privilege threatens the vision of millions each year. Finally recent advances in ocular immunology are presented which offer potential therapeutic applications in corneal and retinal transplantation and in the management of blinding autoimmune diseases of the eye. Eye researchers ophthalmologists and immunologists will appreciate the state of the art and authoritative information presented in *Immune Response and the Eye*.
