**Superantigen Protocols** Teresa Krakauer, 2008-02-05 Leading researchers in the biological chemical and physical investigation of superantigens describe in step by step detail their best experimental techniques to assess the physical characteristics and biological effects of superantigens Their protocols range from those for investigating the interactions of superantigens with cellular receptors to those for the analysis of their immunological and biological effects including methods for using BIOcore to determine binding kinetics and establishing various lymphocyte cell culture systems There are also accounts of such methods as the RNase protection assay cytokine ELISA FACS analysis and cytokine production at the single cell level *Cumulated Index Medicus*, 1979 **Short-Term Test Systems for Detecting Carcinogens** K.H.

Norpoth, 2012-12-06 The varying cancer incidence from country to country and region to region suggests that environmental factors play a considerable role in the aetiology of cancer Whether these factors in the environment moderate the effect of carcinogenic chemicals or whether they might themselves be carcinogenic is not known at the present time What is known is that there are various chemicals both naturally occurring and man made which can induce cancer in man In the Western world estimates vary as to how much cancer is occupational in origin the figures range from 1% to 40% It is our feeling that probably about 10% of cancer has a direct occupational origin Nevertheless this number is considerable and it behoves us therefore to identify those chemicals which are carcinogenic and to reduce human exposure Recent work on the mode of action of carcinogenic chemicals suggests that the majority exert their effect through an activation step to give electrophilic metabolites Such metabolites have as a common feature the ability to react with cellular nucleophiles to give covalently bound products Such reaction will occur after carcinogen treatment of animals with nucleic acids particularly in target organs It is reaction with nucleic acids that provides the basis of a number of short term tests for carcinogens since the basic composition of DNA is similar in micro organisms and in human cells **Acta Biologica Academiae Scientiarum**

**Hungaricae**, 1979 **Fundamentals of Immunology** O.G. Bier, W. Dias Da Silva, D. Goetze, I. Mota, 2012-12-06 This textbook of basic and clinical immunology has been written primarily for medical and biology students who are receiving their first introduction to this fascinating field Although we have presumed some knowledge of basic biology particularly physiology and biochemistry our primary intent has not been to cover in depth the latest research findings Rather we have sought to lay

a firm foundation for subsequent reading in the laboratory and clinical sciences internal medicine pediatrics microbiology serology physiology cell biology and genetics Hence the first part of the text presents the various components of basic immunology while the second shows how these elements interact under both normal physiologic and pathologic conditions To facilitate comprehension of the relationship between basic and clinical immunology we have introduced cross references throughout the book A glossary of important terms has also been included Selected references are provided with each chapter to guide the student to additional information on topics of special interest Throughout the book we have attempted to convey to new students of immunology some of the excitement which the subject has long held for us If we have succeeded the task of writing will have been worthwhile
