This modified set of functions includes plenty of new routines that make a Mac programmer's work easier and more powerful, provided that the programmer knows how to make use of the new code. The reader learns about the all-new Carbon Event Manager as well as the changes and enhancements that have been made to existing managers such as the Window Manager and the Menu Manager. Readers new to Mac programming will appreciate the journey that takes them from the start of a new Macintosh project to the final building of a standalone Mac OS X application. Readers experienced in programming the Mac will find this same material of great interest and these readers will benefit from the lengthy section on porting existing Mac OS 8 and 9 applications to Mac OS X. Finally, readers will appreciate the Carbon API reference section that provides information and example code for dozens of the most commonly used Carbon routines. All the code developed in the book will be available on www.newriders.com.
