Machine Learning: ECML-94 Francesco Bergadano, 1994-03-22 This volume contains the proceedings of the European Conference on Machine Learning 1994 which continues the tradition of earlier meetings and which is a major forum for the presentation of the latest and most significant results in machine learning Machine learning is one of the most important subfields of artificial intelligence and computer science as it is concerned with the automation of learning processes This volume contains two invited papers 19 regular papers and 25 short papers carefully reviewed and selected from in total 88 submissions The papers describe techniques algorithms implementations and experiments in the area of machine learning

Machine Learning: ECML 2004 Jean-Francois Boulicaut, Floriana Esposito, Fosca Giannotti, Dino Pedreschi, 2004-11-05 The proceedings of ECML PKDD 2004 are published in two separate albeit intertwined volumes the Proceedings of the 15th European Conference on Machine Learning LNAI 3201 and the Proceedings of the 8th European Conference on Principles and Practice of Knowledge Discovery in Databases LNAI 3202 The two conferences were co located in Pisa Tuscany Italy during September 20-24 2004 It was the fourth time in a row that ECML and PKDD were co located after the successful co locations in Freiburg 2001 Helsinki 2002 and Cavtat Dubrovnik 2003 it became clear that researchers strongly supported the organization of a major scientific event about machine learning and data mining in Europe We are happy to provide some statistics about the conferences 581 different papers were submitted to ECML PKDD about a 75% increase over 2003 280 were submitted to ECML 2004 only 194 were submitted to PKDD 2004 only and 107 were submitted to both Around half of the authors for submitted papers are from outside Europe which is a clear indicator of the increasing attractiveness of ECML PKDD The Program Committee members were deeply involved in what turned out to be a highly competitive selection process We assigned each paper to 3 viewers deciding on the appropriate PC for papers submitted to both ECML and PKDD As a result ECML PC members reviewed 312 papers and PKDD PC members reviewed 269 papers We accepted for publication regular papers 45 for ECML 2004 and 39 for PKDD 2004 and short papers that were associated with poster presentations 6 for ECML 2004 and 9 for PKDD 2004 The global acceptance rate was 14.5% for regular papers 17% if we include the short papers

Machine Learning and Its Applications Georgios Paliouras, Vangelis Karkaletsis, Constantine D. Spyropoulos, 2003-06-29 In recent years machine learning has made its way from artificial intelligence into areas of administration commerce and industry Data mining is perhaps the most widely known demonstration of this migration complemented by less publicized applications of machine learning like adaptive systems in industry financial prediction medical diagnosis and the construction of user profiles for Web browsers This book presents the capabilities of machine learning methods and ideas on how these

methods could be used to solve real world problems The first ten chapters assess the current state of the art of machine learning from symbolic concept learning and conceptual clustering to case based reasoning neural networks and genetic algorithms The second part introduces the reader to innovative applications of ML techniques in fields such as data mining knowledge discovery human language technology user modeling data analysis discovery science agent technology finance etc

Techniques for Designing Classification Problems Ratna Raju Mukiri, 2018-10-30 The thesis is mainly concerned with classification of tasks and related issues that appear in real world scenarios such as incomplete records and irrelevant and or redundant pieces of information imbalanced class distribution and imbalanced error costs There is no universally accepted best classifier and general rules for appropriate metric to select in a certain context exist Translating the data characteristics and problem goals into appropriate performance metrics appropriate classifier is successful data mining process An original meta learning framework for automated classifier selection is presented in the case studies section for baseline performance assessment

Qualitative Representation of Spatial Knowledge Daniel Hernandez, 1994-06-28 This book develops for the first time a qualitative model for the representation of spatial knowledge based only on locative relations between the objects involved The core of this book is devoted to the study of qualitative inference methods that take into account the rich structure of space These methods can be applied to quite a number of areas characterized by uncertain or incomplete knowledge as for example geographic information systems robot control computer aided architectural design and natural language information systems

Inductive Logic Programming Nada Lavrač, Saso Dzeroski, 1997-09-03 This book constitutes the strictly refereed post workshop proceedings of the 6th International Workshop on Inductive Logic Programming ILP 96 held in Stockholm Sweden in August 1996 The 21 full papers were carefully reviewed and selected for inclusion in the book in revised version

Also included is the invited contribution Inductive logic programming for natural language processing by Raymond J Mooney Among the topics covered are natural language learning drug design NMR and ECG analysis glaucoma diagnosis efficiency measures for implementations and database interaction program synthesis proof encoding and learning in the absence of negative data and least generalizations under implication ordering Metalearning Pavel Brazdil, Christophe Giraud Carrier, Carlos Soares, Ricardo Vilalta, 2008-11-26 Metalearning is the study of principled methods that exploit metaknowledge to obtain efficient models and solutions by adapting machine learning and data mining processes While the variety of machine learning and data mining techniques now available can in principle provide good model solutions a methodology is still needed to guide the search for the most appropriate model in an efficient way Metalearning provides one such methodology that allows systems to become more effective through experience This book discusses several approaches to obtaining knowledge concerning the performance of machine learning and data mining algorithms It shows how this knowledge can be reused to select combine compose and adapt both algorithms and models to yield faster more effective solutions to data mining problems It can thus help developers improve their algorithms and also develop learning systems that can improve themselves The book will be of interest to researchers and graduate students in the areas of machine learning data mining and artificial intelligence
