Cordón,Francisco Herrera Triguero,Luis Magdalena,2013-11-11 Fuzzy modeling usually comes with two contradictory requirements interpretability which is the capability to express the real system behavior in a comprehensible way and accuracy which is the capability to faithfully represent the real system In this framework one of the most important areas is linguistic fuzzy modeling where the legibility of the obtained model is the main objective This task is usually developed by means of linguistic Mamdani fuzzy rule based systems An active research area is oriented towards the use of new techniques and structures to extend the classical rigid linguistic fuzzy modeling with the main aim of increasing its precision degree Traditionally this accuracy improvement has been carried out without considering the corresponding interpretability loss Currently new trends have been proposed trying to preserve the linguistic fuzzy model description power during the optimization process Written by leading experts in the field this volume collects some representative researcher that pursue this approach **Organized Complexity in Business** Johannes Strikwerda,2023-02-25 This book explores a most central phenomenon in our contemporary businesses and organization the growing complexity in business Economic growth and growth of complexity always have been inseparable but the last decennia the growth of complexity appears to outrun our growth of knowledge and understanding For success and continuity the modern firm in the developing complexity of its markets and societal contexts must have the capacity to master and exploit a commensurate level of complexity in its internal organization This book is the first of its kind to help the reader to understand the different types of complexity and the different concepts and tools to deal with each of them in business administration strategy and organization This book offers the reader a fresh perspective on conventional concepts and tools in the field of business administration and bridges these to new concepts as are being used to exploit new complexities In the process the reader becomes familiar with the rich cybernetic concept of information as a basis for the information based organization and to master big data With that complex decision making is clarified and a fresh understanding of the core function of the organization coordination is offered for those who want to solve the issue of self coordination The book provides working examples but even more the strongest tool to master and to reduce complexity a deeper and broader understanding of what is going on beneath the surface of what we experience daily This book builds on Herbert Simon s hypothesis of simplicity to use the simplicity of process to deal with the complexity of state Inductive Logic Programming Stan Matwin,2003-02-12 This book constitutes the thoroughly refereed post proceedings of the 12th International Conference on Inductive Logic Programming ILP 2002 held in Sydney Australia in July 2002 The 22 revised full papers presented were carefully selected during two rounds of reviewing and revision from 45 submissions Among the topics addressed are first order decision lists learning with description logics bagging in ILP kernel methods concept learning
