Machines And Intelligence A Critique Of Arguments Against The Possibility Of Artificial Intelligence:

Machines and Intelligence Stuart Goldkind, 1987-04-21 Over the years numerous attempts have been made to show that human intelligence is related to some quality feature or ability that machines cannot possibly have In this unique study Dr Goldkind reconstructs and analyzes the principal arguments of this kind that have not received adequate treatment in the past and responds to each of them in detail Among the questions explored are whether machines can engage in purposive behavior what the relationship is between causal and purposive explanations of behavior whether machines are capable of human error and whether they can perform activities and functions such as natural language understanding and dealing with contexts Dr Goldkind concludes that none of the arguments succeeds in proving that machines must lack the specific abilities or qualities that are posited as uniquely human

Countering Hybrid Threats Against Critical Infrastructures Dorin Radu, Mirsada Hukić, Ashok Vaseashta, 2025-04-30 This proceedings volume presents a collection of articles from key practitioners from relevant areas with experience in critical infrastructure The authors acknowledge that the responsibility for critical infrastructure protection is primarily a matter of international importance hence a high degree of cross border and cross sectoral interdependencies must be coordinated or where appropriate legally harmonized efforts at the international level including the smooth functioning of the internal policies The book focuses on countering hybrid threats that render critical infrastructures vulnerable An understanding of such threats will render critical infrastructure safe secure and resilient The protection of national critical infrastructures as well as of the functions and services critical to the proper functioning of society is a key priority and requires a new unique and strategic approach Work in this direction must consider the strong interdependencies between the various critical functions and services including financial services the key role of the private sector the changing security environment and emerging risks both in the physical and cyber fields In addition to legal requirements agreements should be promoted with private sector infrastructure and service owners and operators to ensure the continuity of and access to critical services including beyond force majeure by ensuring an acceptable level of preparedness to respond all relevant threats as well as the flexibility to address and mitigate the effects of low probability high impact events

Causality for Artificial Intelligence Jordi Vallverdú, 2024-06-28 How can we teach machine learning to identify causal patterns in data This book explores the very notion of causality identifying from a naturalistic and evolutionary perspective how living systems deal with causal relationships At the same time using this knowledge to identify the best ways to apply such biological models in machine learning scenarios One of the more fundamental challenges for AI experts is to design machines that can understand the world identifying the basic rules that govern reality Statistics are powerful and fundamental for this process but they are only one of the necessary tools Counterfactual thinking is the other part of the necessary process that will help machines to become intelligent This book explains the paths that can lead to algorithmic causality It is essential reading for those who are not afraid of thinking at the interface of various academic disciplines or fields AI machine learning philosophy neuroscience anthropology psychology computer sciences and who are interested in the analysis of causal thinking and the ways in which

cognitive systems natural or artificial can act in order to understand their environment Professor Vallverd is currently working on biomimetic cognitive architectures and multicognitive systems His research has explored two main areas epistemology and cognition Since his early Ph D research on epistemic controversies he has analyzed several aspects of computational epistemology His latest research has focused on the causal challenges of machine learning techniques particularly deep learning One of his most promising advances is statistics meets causal graph reasoning via Directed Acyclic Graphs which still has several conceptual paths that need to be explored and identified Counterfactual reasoning is a fundamental part of these open debates which are under the analysis of Prof Vallverd His current research is supported as part of the following projects GEHUCT and ICREA Acad mia

Intelligence Analysis in the Digital Age Stig Stenslie,Lars Haugom,Brigt H. Vaage,2021-08-05 This book examines intelligence analysis in the digital age and demonstrates how intelligence has entered a new era While intelligence is an ancient activity the digital age is a relatively new phenomenon This volume uses the concept of the digital age to highlight the increased change complexity and pace of information that is now circulated as new technology has reduced the time it takes to spread news to almost nothing These factors mean that decision makers face an increasingly challenging threat environment which in turn increases the demand for timely relevant and reliable intelligence to support policymaking In this context the book demonstrates that intelligence places greater demands on analysis work as the traditional intelligence cycle is no longer adequate as a process description In the digital age it is not enough to accumulate as much information as possible to gain a better understanding of the world To meet customers needs the intelligence process must be centred around the analysis work which in turn has increased the demand for analysts Assessments not least predictions are now just as important as revealing someone else s secrets This volume will be of much interest to students of intelligence studies security studies and international relations
