Microbial Enhancement of Oil Recovery - Recent Advances E.T. Premuzic, A. Woodhead, 1993-07-23 This volume is concerned with many aspects of petroleum microbiology and biochemistry all with strong commercial applications Worldwide research on the major topic MEOR Microbially Enhanced Oil Recovery is comprehensively covered under experimental work field applications and modeling The challenge of formulating a complete in situ MEOR system microorganisms nutrient package and other amendments is explored together with the future needs in the design and execution of this new biotechnology

Microbial Enhanced Oil Recovery James E. Zajic, 1983-01-01 **Microbial Enhanced Oil Recovery Research** M. M. Sharma, 1991 Theory and Practice in Microbial Enhanced Oil Recovery Kun Sang Lee, Tae-Hyuk Kwon, Taehyung Park, Moon Sik Jeong, 2020-07-18 Selection of the optimal recovery method is significantly influenced by economic issues in today's oil and gas markets Consequently the development of cost effective technologies which bring maximum oil recovery is the main interest in today's petroleum research communities Theory and Practice in Microbial Enhanced Oil Recovery provides the fundamentals latest research and creditable field applications Microbial Enhanced Oil

Recovery MEOR is potentially a low priced and eco friendly technique in which different microorganisms and their metabolic products are implemented to recover the remaining oil in the reservoir Despite drastic advantages of MEOR technology it is still not fully supported in the industry due to lack of knowledge on microbial activities and their complexity of the process While some selected strategies have demonstrated the feasibility to be used on a mass scale through both lab and field trials more research remains to implement MEOR into more oil industry practices This reference delivers comprehensive descriptions on the fundamentals including basic theories on geomicrobiology experiments and modeling as well as current tested field applications Theory and Practice in Microbial Enhanced Oil Recovery gives engineers and researchers the tool needed to stay up to date on this evolving and more sustainable technology Covers fundamental screening criteria and theories selective plugging and mobility control mechanisms Describes the basic effects on environmental parameters and the mechanics of simulation including microbial growth kinetics Applies up to date practical applications proven in both the lab and the field

Microbial Enhanced Oil Recovery and Compositions Therefor, 1990 A method is provided for microbial enhanced oil recovery wherein a combination of microorganisms is empirically formulated based on survivability under reservoir conditions and oil recovery efficiency such that injection of the microbial combination may be made in the presence of essentially only nutrient solution directly into an injection well of an oil bearing reservoir having oil present at waterflood residual oil saturation concentration The microbial combination is capable of displacing residual oil from reservoir rock which oil may be recovered by waterflooding without causing plugging of the reservoir rock Further the microorganisms are capable of being transported through the pores of the reservoir rock between said injection well and associated production wells during waterflooding which results in a larger area of the reservoir being covered by the oil mobilizing microorganisms

Microbial Enhancement of Oil Recovery Erle C. Donaldson, 1991 This conference was instituted to examine field activities in Microbial Enhancement of Oil Recovery The U S Department of Energy has sponsored several field projects and the details from some of these were presented as well as a few from industry The balance of the program was concerned with new developments in research Today s oil production technology leaves one third to one half of the original oil in place in the reservoir at abandonment of secondary recovery waterflooding This leaves a very large target for microbial enhanced oil recovery which was shown by the research papers of this conference to be capable of producing up to 50% of the residual oil The field trials show that the normal projected oil production decline curve can be reversed or leveled off by microbial enhancement of oil recovery This conference has shown that a variety of applications are possible to correct oilfield problems as well as to enhance oil recovery Among these is the suppression of hydrogen sulfide production which alone is a tremendous advance because of the large quantity of sour oil production If hydrogen sulfide production can be curtailed it would increase the value of the produced oil decrease its toxicity and largely decrease its corrosiveness All of these would be welcome both in the field and at the petroleum refinery where special precautions must be taken to process sour crude oil

Another very important discovery is the ability of certain bacteria to eliminate paraffin deposition around the producing well and in the tubulars. This is a welcome improvement for many producers who have considerable difficulty in controlling paraffin deposition. *Microbial Enhanced Oil Recovery Research. [Peptides].*, 1991. The objective of this work is to develop an engineering framework for the exploitation of microorganisms to enhance oil recovery. Specific goals include: 1 the production, isolation, chemical characterization and study of the physical properties of microbially produced surfactants; 2 development of simulators for MEOR; 3 model studies in sandstone cores for the characterization of the interactions between growing microbially cultures and oil reservoirs; 4 design of operation strategies for the sequential injection of microorganisms and nutrient in reservoirs. Accomplishments are: 1 ultra low interfacial tensions 0.003 mN/M were obtained between decane and 5% NaCl brine using biosurfactants obtained from *Bacillus Licheniformis* JF 2 which is the lowest IFT ever reported for biosurfactants; 2 a method was developed to isolate the biosurfactant from the growth medium; 3 the structure of the isolated biosurfactant has been determined; 4 several techniques have been proposed to increase the yield of the surfactant; and 5 an MEOR simulator has been completed. *Microbial Enhanced Oil Recovery* Sonya L. Kirby, University of Regina, Faculty of Engineering, 1995. Introduction to Microbial Enhanced Oil Recovery E. Ionescu, Petroleum Recovery Institute, 1984.

Microbial Enhanced Oil Recovery Salaheddin Hmedi, 2017-03-19. The main aim of the study is to explore the effectiveness of microbial enhanced oil recovery, identifying the advantages and disadvantages of this technique. To this end, it investigates current and potential developments in MEOR and the challenges associated with using bacteria to enhance oil production. This broad aim was broken down into a set of key objectives: To look into the current status of microbial enhanced oil recovery; To examine the role and significance of microbial enhanced oil recovery; To explore the technique's negative and positive effects on reservoirs; To investigate the impact of microbial enhanced oil recovery on the environment. **Enhanced**

Oil Recovery Field Case Studies James J. Sheng, 2013-04-10. This chapter presents microbial enhanced oil recovery (MEOR) mechanisms. First, microbes and nutrients used in MEOR are introduced. Screening criteria are listed. Finally, several microbial field applications are presented. These applications include single well microbial huff and puff, microbial waterflooding, wellbore stimulation to remove wellbore or formation damage, and MEOR using indigenous microbes. *Microbial Enhanced Oil Recovery Research*, 1990. *Microbial Enhanced Oil Recovery Research* Mukul M. Sharma, George Georgiou, 1993.

Enhanced Oil Recovery Field Case Studies Lewis Brown, 2013-04-10. Microbial enhanced oil recovery (MEOR) is the use of microorganisms to increase the recovery of oil from existing oil reservoirs. There are nearly 400 US patents dealing with MEOR, some of which add microorganisms to nearly depleted oil reservoirs while others rely on the indigenous microorganisms. The patent literature is reviewed and two successful field trials by the author are described. A completed field trial using microbial permeability profile modification (MPPM) in a field using waterflooding as the secondary method of

oil recovery was proven to recover over 360 000bbl of oil since 2004 and is predicted to recover another 230 000bbl of oil by 2018 A second field trial using MPPM is being employed in a field with a petroliferous formation at 115 C The field is undergoing CO2 flooding as the secondary recovery method and MPPM has been proven to produce extra oil from five surrounding wells *Experimental and Numerical Investigation of Pore-scale Mechanisms of Microbial Enhanced Oil Recovery (MEOR) Using a Microfluidics Approach* Calvin Lumban Gaol,2020 **State of the Art of Microbial Enhanced Oil Recovery** Rebecca J. Smith,A. Gene Collins,National Institute for Petroleum and Energy Research,1984 **Simulation of microbial enhanced oil recovery processes** Amit Kumar Sarkar,1992
