Military Industrial Revolution Of Our:

The Military and Industrial Revolution of Our Time Fritz Sternberg, 1954 **The Military Revolution and Revolutions in Military Affairs** Mark Fissel, 2022-12-05

The Military Revolution and Revolutions in Military Affairs updates two central debates in military history the one surrounding the concept of military revolution and the one on military affairs whilst advancing original research in both fields Only a handful of publications consider the military revolution and the RMA in tandem This book breaks new ground conceptually and appeals to an exceptionally large and diverse readership Comparative revisionist studies of the military revolution and RMA better enable us to comprehend the historical continuum and reveal the new RMA for what it is And for what it is shortly to become This book presents original contributions within the epicentre of the military revolution debate the 1500s with an emphasis on gunpowder revolution offensively and defensively The connections with the Revolution in Military Affairs are then made explicit by scholars a practitioner and an analyst with an emphasis on airborne lethal autonomous weapons systems This is a chronologically broad and unique methodological approach to a historical debate that begs for clarification as we enter an era where killer robots will almost certainly take from humans their monopoly on violence

The Military-Industrial Complex and American Society S. Mike Pavelec, 2010-01-18

The first complete reference on the military industrial complex from its Cold War era expansion to the present The Military Industrial Complex and American Society addresses the broad subject of the political economy of defense research and its wide reaching effects on many aspects of American life Ranging from the massive arms buildup of the Cold War to the influx of private contractors and corporations such as Halliburton it reveals the interconnectedness of the military industry and government within the history of this public private enterprise The Military Industrial Complex and American Society offers over 100 alphabetically organized entries on a wide of range of significant research bodies and government agencies as well as important people events and technologies In addition a series of essays looks at such essential topics as propaganda think tanks defense budgeting the defense industry and the economy and the breakdown of the military industrial complex in Vietnam With this work students policymakers and other interested readers will understand the ramifications of the relationships between industry scientific and technological communities the government and society

Information and Revolutions in Military Affairs Emily O. Goldman, 2013-09-13

Like the industrial revolution before it the information technology revolution appears to be creating a new ruling class a new economy and a new society Information technology is also transforming military operations and warfare A vast literature on the revolution in military affairs or RMA cites the important indeed dominant role of information technology in enabling a new military revolution This volume challenges conventional wisdom not by claiming that information s impact on military operations is not positive or transformative but by claiming its impact is not new Previous periods of military revolution can also be characterized as information revolutions Through the close examination of six case studies of military transformation during the industrial age

the contributors to this volume demonstrate how the employment of emerging information systems was critical to realizing a major boost in military effectiveness. The most successful adaptations to the new environment were made by the most skillful users of information. This volume draws upon the expertise of leading military historians, political scientists, and defense practitioners to craft a set of original essays that provide the first retrospective examination of how information affects the process of military revolution. This book was previously published as a special issue of the *Journal of Strategic Studies*.

Military Review, 1927 **Law, Science, Liberalism, and the American Way of Warfare** Stephanie Carvin, Michael John Williams, 2015. Founded and rooted in Enlightenment values, the United States is caught between two conflicting imperatives when it comes to war: achieving perfect security through the annihilation of threats and a requirement to conduct itself in a liberal and humane manner. In order to reconcile these often clashing requirements, the US has often turned to its scientists and laboratories to find strategies and weapons that are both decisive and humane. In effect, a modern faith in science and technology to overcome life's problems has been utilized to create a distinctly American Way of Warfare. Carvin and Williams provide a framework to understand the successes and failures of the US in the wars it has fought since the days of the early Republic through to the War on Terror. It is the first book of its kind to combine a study of technology, law, and liberalism in American warfare.

Bulletin of the Atomic Scientists, 1961-10. The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world.

Encyclopedia of Violence, Peace, and Conflict, 2008-09-05. The 2nd edition of Encyclopedia of Violence, Peace, and Conflict provides timely and useful information about antagonism and reconciliation in all contexts of public and personal life. Building on the highly regarded 1st edition (1999) and publishing at a time of seemingly inexorably increasing conflict and violent behaviour, the world over, the Encyclopedia is an essential reference for students and scholars working in the field of peace and conflict resolution studies and for those seeking to explore alternatives to violence and share visions and strategies for social justice and social change. Covering topics as diverse as Arms Control, Peace Movements, Child Abuse, Folklore, Terrorism, and Political Assassinations, the Encyclopedia comprehensively addresses an extensive information area in 225 multi-disciplinary, cross-referenced and authoritatively authored articles. In his Preface to the 1st edition, Editor in Chief Lester Kurtz wrote: "The problem of violence poses such a monumental challenge at the end of the 20th century that it is surprising we have addressed it so inadequately. We have not made much progress in learning how to cooperate with one another more effectively or how to conduct our conflicts more peacefully. Instead, we have increased the lethality of our combat through revolutions in weapons technology and military training." The Encyclopedia of Violence, Peace, and Conflict is designed to help us to take stock of our knowledge concerning these crucial phenomena. Ten years on, the need for an authoritative and cross-disciplinary approach to the great issues of violence and peace seems greater than ever. More than 200 authoritative multidisciplinary articles in a 3-volume set.

Many brand new articles alongside revised and updated content from the First Edition Article outline and glossary of key terms at the beginning of each article Entries arranged alphabetically for easy access Articles written by more than 200 eminent contributors from around the world **Bulletin of the Atomic Scientists** ,1961-10 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin s iconic Doomsday Clock stimulates solutions for a safer world War, Strategy, and Military Effectiveness Williamson Murray,2011-09-30 This collection of articles represents Professor Williamson Murray s efforts to elucidate the role that history should play in thinking about both the present and the future They reflect three disparate themes in Professor Murray s work his deep fascination with history and those who have acted in the past his fascination with the similarities in human behavior between the past and the present and his belief that the study of military and strategic history can be of real use to those who will confront the daunting problems of war and peace in the twenty first century The first group of essays addresses the relevance of history to an understanding of the present and to an understanding of the possibilities of the future The second addresses the possible direct uses of history to think through the problems involved in the creation of effective military institutions The final group represents historical case studies that serve to illuminate the present **Quarterly Review of Military Literature** ,1960 **The Rise of the West** , *Political Economy and American Capitalism* Rodney D. Peterson,2012-12-06 We are now witness to the waning years of the 1900s Soon we shall embark upon a bold journey into the uncharted territory of the twenty first of various persuasions have speculated as to what the century Futurists oncoming decades might bestow upon us Not surprising most predictions are closely tied to advances in technology especially in astrophysics biochemistry electronics and genetics But what about the economic system Whatever happens forces have undoubtedly already been set in motion which will mold or remold the structure and character of American capitalism American capitalism has been is and will undoubtedly continue to be a system in transition Technology perennially changes albeit at a faster or slower pace sometimes than others and society s institutions continually adjust to these technological changes Such adjustments alter the character of our politico economic system when statutes are enacted court decisions rendered administrative agency rules promulgated and cultural mores realigned to supplant old ones Other adaptations are brought about when small group collective action is successful in causing a special status of privilege to be conferred on some members of society but restrictions to be levied on others War, Technology and the State Warren Chin,2023-07-31 This book explores the relationship between the state and war within the context of seismic technological change As we experience a fourth industrial revolution technology already exerts a huge impact on the character of war and military strategies in the form of drones and other types of remote warfare However technological developments are not confined to the defence sector and the diffusion of military technology inevitably also affects the wider economy and society This book investigates these possible developments and speculates on

their ramifications for the future Through its analysis the book questions what will happen to war and the state and whether we will reach a point where war leads to the unmaking of the state itself Understanding the Military Design Movement Ben Zweibelson, 2023-06-09 This book explains the history and development of the military design movement featuring case studies from key modern militaries Written by a practitioner the work shows how modern militaries think and arrange actions in time and space for security affairs and why designers are disrupting challenging and reconceptualizing everything previously upheld as sacred on the battlefield It is the first book to thoroughly explain what military design is where it came from and how it works at deep philosophically grounded levels and why it is potentially the most controversial development in generations of war fighters The work explains the tangled origins of commercial design and that of designing modern warfare the rise of various design movements and how today's military forces largely hold to a Newtonian stylization built upon mimicry of natural science infused with earlier medieval and religious inspirations Why does our species conceptualize war as such and how do military institutions erect barriers that become so powerful that efforts to design further innovation require entirely novel constructs outside the orthodoxy The book explains design stories from the Israel Defense Force the US Army the US Marine Corps the Canadian Armed Forces and the Australian Defence Force for the first time and includes the theory doctrine organizational culture and key actors involved Ultimately this book is about how small communities of practice are challenging the foundations of modern defence thinking This book will be of much interest to students of military and strategic studies defence studies and security studies as well as design educators and military professionals Israel and Latin America: The Military Connection Bishara A. Bahbah, Linda Butler, 1986-06-18 *The Military Gazette* , 1928

Army RD & A. , 1995 **Chasing Technoscience** Don Ihde, Evan Selinger, 2003-06-18 an original quirky and illuminating collection of material concerning the relatively new and exciting field of technoscience studies The editors choice of multiple approaches to the work of four major figures is wholly suited to clarifying their unorthodox and consequently somewhat elusive philosophical positions Robert Scharff Although often absent from the considerations of philosophers sociologists and anthropologists the material dimension plays an important and even essential role in the practices of the sciences Chasing Technoscience Matrix for Materiality begins to redress this absence by bringing together four prominent figures who make technoscience or science embodied in its technologies a central theme of their work Through lively personal interviews and substantive essays the ideas of Andrew Pickering Don Ihde Donna Haraway and Bruno Latour are brought to bear on the question of materiality in technoscience The work of these theorists is then compared and critiqued in essays by colleagues Chasing Technoscience is a ground breaking state of the art look at current developments in technoscience **War Transformed** Mick Ryan, 2022-02-15 War Transformed The Future of Twenty First Century Great Power Competition and Conflict provides insights for those involved in the design of military strategy and the forces that must execute that strategy Emphasizing the impacts of technology new era strategic competition demography and

climate change Mick Ryan uses historical as well as contemporary anecdotes throughout the book to highlight key challenges faced by nations in a new era of great power rivalry Just as previous industrial revolutions have advanced societies the nascent fourth industrial revolution will have a similar impact on how humans fight compete and build military power in the twenty first century After reviewing the principle catalysts of change in the security environment War Transformed seeks to provide a preview of the shape of war and competition in the twenty first century Ryan examines both the shifting character of war and its enduring nature In doing so he proposes important trends in warfare that will shape all aspects of human competition and conflict in the coming decades The remainder of the book analyzes how military institutions must prepare for future competition and conflict Competing and engaging in combat in this new era involves new and evolved strategies and warfighting concepts as well as adapting our current military organizations It will also demand building an intellectual edge in military personnel through evolved concepts of training education and development As the competitive environment and potential battlefields continue to change conceptions of combat competition and conflict must also evolve Mick Ryan makes the case for transforming how Western military institutions view war in this century
