America's School for War Peter J. Schifferle, 2010-04-05 When the United States entered World War II it took more than industrial might to transform its tiny army smaller than even Portugal's into an overseas fighting force of more than eight and a half million Peter Schifferle contends that the determination of American army officers to be prepared for the next big war was an essential component in America's ultimate triumph over its adversaries Crucial to that preparation were the army schools at Fort Leavenworth Interwar Army officers haunted by the bloodshed of World War I's Meuse Argonne Offensive fully expected to return to Europe to conclude the unfinished business of that conflict and they prepared well Schifferle examines for the first time precisely how they accomplished this through a close and illuminating look at the students faculty curriculum and essential methods of instruction at Fort Leavenworth He describes how the interwar officer corps there translated the experiences of World War I into effective doctrine engaged in intellectual debate on professional issues conducted experiments to determine the viability of new concepts and used military professional education courses to substitute for the experience of commanding properly organized and resourced units Schifferle highlights essential elements of war preparation that only the Fort Leavenworth education could provide including intensive instruction in general staff procedures hands on experience with the principles and techniques of combined arms and the handling of large division sized formations in combat This readied army officers for an emerging new era of global warfare and enabled them to develop the leadership decision making they would need to be successful on the battlefield But Schifferle offers more than a recitation of curriculum development through the skillful interweaving of personal stories about both school experiences and combat operations collectively recounting the human and professional development of the officer corps from 1918 to 1945 Well crafted and insightful Schifferle's meticulously researched study shows how and why the Fort Leavenworth experience was instrumental in producing that impressive contingent of military officers who led the U S Army to final victory in World War II By the end of the book the attentive reader will also fully comprehend why the military professionals at Fort Leavenworth have come to think of it as the Intellectual Center of the Army

Gunpowder, Explosives and the State Brenda J. Buchanan, 2016-12-05 Gunpowder studies are still in their infancy despite the long standing civil and military importance of this explosive since its discovery in China in the mid ninth century AD In this second volume by contributors who meet regularly at symposia of the International Committee for the History of Technology ICOHTEC the research is again rooted in the investigation of the technology of explosives manufacture but the fact that the chapters range in scope from the Old World to the New from sources of raw materials in south east Asia to the complications of manufacture in the West shows that the story is more than the simple one of how an intriguing product was made This volume is the first to develop the implications of the subject not just in the sense of relating it to changing military technologies but in that of seeing the securing of gunpowder supplies as fundamental to the power of the state and imperial pretensions The search for saltpetre for example an essential ingredient of gunpowder became a powerful engine of sea going European trade from the early seventeenth century Smaller states like Venice were unable to form these distant connections and so to sustain a gunpowder army Stronger states like France and Britain were able to do so and became even more powerful as the demand for improved explosives fostered national strengths leading to a development of the sciences especially chemistry in the former case and of manufacturing techniques in the latter

Militarizing Artificial Intelligence Nik Hynek, Anzhelika Solovyeva, 2022-07-01 This book examines the military characteristics and potential of Artificial Intelligence AI in the new global revolution in military affairs Offering an original perspective on the utilization imagination and politics of AI in the context of military development and weapons regulation the work provides a comprehensive response to the question of how we might reflect on the AI revolution in warfare and what can be said about the ways in which this has been handled In the first part of the book AI is accommodated both theoretically and empirically in the strategic context of the Revolution in Military Affairs RMA The book offers a novel understanding of autonomous weapons as multi layered composite systems pointing to a complex non linear interplay between evolutionary and revolutionary dynamics In the second section the book provides an impartial analysis of the related politics and operations of power whereby increases in military budgets and R D of the great powers are met and countered by advocacy networks and scientists campaigning for a ban on lethal autonomous weapons As such it moves beyond popular caricatures of killer robots and points out some of the problems which result from over reliance on such imagery This book will be of much interest to students of strategic studies critical security studies arms control and disarmament science and technology studies and general International Relations

The Heirs of Archimedes Brett D. Steele, Tamera Dorland, 2005 Essays analyze the connections between science and technology and military power in the late medieval Renaissance and Enlightenment periods The integration of scientific knowledge and military power began long before the Manhattan Project In the third century BC Archimedes was renowned for his research in mechanics and

mathematics as well as for his design and coordination of defensive siegecraft for Syracuse during the Second Punic War. This collection of essays examines the emergence during the early modern era of mathematicians, chemists, and natural philosophers who, along with military engineers, navigators, and artillery officers, followed in the footsteps of Archimedes and synthesized scientific theory and military practice. It is the first collaborative scholarly assessment of these early military scientific relationships, which have been long neglected by scholars both in the history of science and technology and in military history. From a historical perspective, this volume investigates the deep connections between two central manifestations of Western power: examining the military context of the Scientific Revolution and the scientific context of the Military Revolution. Unlike the classic narratives of the Scientific Revolution that focus on the theories of and conflicts between Aristotelian and Platonic worldviews, this volume highlights the emergence of the Archimedean ideal, in which a symbiosis exists between the supply of mechanistic science and the demand for military capability. From a security studies perspective, this work presents an in-depth study of the central components of military power, as well as their dynamic interactions in the political, acquisitional, operational, and tactical domains. The essays in this volume reveal the intellectual and cultural struggles to enhance the capabilities of these components, an exercise in transforming military power that remains relevant for today's armed forces. The volume sets the stage by examining the innovation of gunpowder weaponry in both the Christian and the Islamic states of the late medieval and Renaissance eras. It then explores such topics as the cultural resistance to scientific techniques and the relationship between early modern science and naval power, particularly the intersecting developments in mathematics and oceanic navigation. Other essays address the efforts of early practitioners and theorists of chemistry to increase the power and consistency of gunpowder. The final essays analyze the application of advanced scientific knowledge and Enlightenment ideals to the military engineering and artillery organizations of the eighteenth century. The volume concludes by noting the global spread of the Archimedean ideal during the nineteenth century as an essential means for resisting Western imperialism.

Made, Not Born Bruce Newsome, 2007-09-30. Why do the combat capabilities of individual soldiers vary so much? This book seeks to provide an answer to this and other questions about variability in combat performance. Some soldiers flee quickly from the battlefield, while others endure all hardships until the bitter end. Some combat units can perform numerous types of missions, while others cannot keep themselves organized during peacetime. Some militaries, armed with obsolete weapons, have out-fought enemies with the latest weapons, just as some massively outnumbered armies have beaten back much larger opponents. In this first social scientific study of the effectiveness of combat troops, Newsome evaluates competing explanations for the varying combat capabilities and performances. There are four main explanations, each emphasizing the influence of a single factor. The first focuses on material endowments: How well funded are the troops? Do they have the latest protective gear and the most advanced weaponry? Second, some analysts claim that democracies produce better commanders, superior strategies, more motivated

personnel or better managed personnel others however associated those characteristics with more authoritarian forms of government Third is the idea that giving more power to the troops on the ground in individual combat units empowers them with decision making capability and adaptability to fast changing situations and circumstances Newsome presents evidence that decentralized personnel management does correlate with superior combat performance Fourth soldier capabilities and performance often are assumed to reflect intrinsic attributes such as prior civilian values Newsome argues that the capabilities of combat soldiers are acquired through military training and other forms of conditioning but he does not entirely discount the role of a soldier's individual character In the age old nature vs nurture argument he finds that intrinsic qualities do count but that extrinsic factors such as training and environment matter even more

Securing the MRAP James Hasik, 2021-08-16 Dwight D Eisenhower once quipped You will not find it difficult to prove that battles campaigns and even wars have been won or lost primarily because of logistics Military acquisition and procurement that is how a nation manages investments technologies programs and support is critical to wartime success or failure When unexpected battlefield problems arise how do the government the military and industry work together to ensure effective solutions During the American counterinsurgent campaign in Iraq the improvised explosive device emerged as a disruptive and devastating threat As Humvees and their occupants were ripped apart by IEDs it was clear that new solutions had to be found These solutions already existed but had not been procured highlighting the need for more effective marketing to the military by industry The ultimate successful response the mine resistant ambush protected vehicle or MRAP required years of entrepreneurial marketing by the defense industry In Securing the MRAP Lessons Learned in Marketing and Military Procurement James Hasik explores how these vehicles which the American military mostly rejected despite the great need for them eventually came to be adopted as the Pentagon's top procurement priority Hasik traces the story of the MRAP from the early 1970s to the future of mine resistant vehicles on the battlefields of tomorrow An important contribution to the seemingly disparate fields of marketing and defense policy Securing the MRAP is an eye opening revelation to defense industrialists military officers and government officials who want to understand how to avoid another IED Humvee debacle

In the Middle of the Fight David Eugene Johnson, Adam Grissom, Olga Oliker, 2008 This monograph presents a qualitative assessment of the performance of medium armored forces in 13 past conflicts that span the range of military operations The accompanying analysis is designed to help inform U S Army decisions about fielding medium armored forces in the future The case histories yielded three major insights First medium armored forces fare poorly against competent heavily armored opponents This finding will prove relevant to the U S Army's medium armored forces if their survivability and lethality do not live up to expectations or cannot be fully realized in battlefield conditions Second doctrinal and organizational steps can in certain circumstances mitigate medium armor's liabilities These steps include the implementation of high quality combined arms tactics down to the lowest echelons the effective application of supporting firepower and training for crews and junior

leaders Finally the U S Army has lacked a forced entry armor capability since the retirement of the M551 Sheridan Neither the Stryker vehicle nor the Future Combat Systems as currently envisioned can fill that critical void The authors conclude that it would be prudent for the U S Army to maintain a mix of heavy medium armored and light forces that can be task organized and employed in conditions that best match their attributes Medium armored forces have much to offer in such a mix provided by publisher

Armed Forces: 2025 Maj Gen A K Lal (Retd), 2012-05-09 Transformation should lie at the heart of our new approach to defense The development of transformational capabilities processes and force structures should be given strategic focus to meet the principal challenges under our defense strategy India is already ceased with the necessity of transformation albeit without any documented national security guidelines or operating instructions which are legislated or have the validation of at least the Cabinet Committee on Security CCS In other words the first step would be to create a draft security strategy

Transforming America's Military , Air University Library Index to Military Periodicals ,1999 Military Control in Pakistan Mazhar Aziz,2007-10-24 This volume examines the role of the military the most influential actor in Pakistan and challenges conventional wisdom on the causes of political instability in this geographically important nuclear state It rejects views that ethnic and religious cleavages and perceived economic or political mismanagement by civilian governments triggers military intervention in Pakistan The study argues instead that the military intervenes to remove civilian governments where the latter are perceived to be undermining the military s institutional interests Mazhar Aziz shows that the Pakistani military has become a parallel state and given the extent of its influence will continue to define the nature of governance within the polity Overall Military Control in Pakistan is a timely reminder and an important resource for both scholars and policy makers clearly demonstrating the need to refocus attention on the problem of an influential military whilst drawing appropriate conclusions about issues ranging from democratic norms political representation and civilian military relations

Another View of the Revolution in Military Affairs Jeffrey R. Cooper,1994 In April 1994 the Army War College and the Strategic Studies Institute hosted the Fifth Annual Strategy Conference The theme of this year s conference was The Revolution in Military Affairs RMA Defining an Army for the 21st Century Jeffrey R Cooper presented the following paper as part of an opening panel which sought to define the RMA He urges defense planners to determine what strategic as opposed to operational benefits might be derived from the RMA He contends that making the internal reforms that will be required will be as challenging as coming to terms with the operational and strategic implications of the new technologies The first requirement is to understand the parameters and dynamics of this particular revolution in military affairs Mr Cooper puts the RMA in historical perspective by discussing the relationships among technology socioeconomic and political change and their implications for warfare during the Napoleonic era the mid 19th century and World Wars I and II He argues that in the past dramatic technological change affected warfare in different ways Mr Cooper warns that by using the RMA to define a technical legacy we make three errors First such an approach could lead to a fruitless search for a silver bullet technology on which to build the RMA Second the focus on technology could shift attention away from the critical issues of purpose strategy doctrine operational innovation and organizational adaptation Finally committing the first two errors will compound the problem by wasting very scarce defense resources on new programs and projects which may have little or nothing to do with

the strategic situation Military professionals and defense planners alike need to remind themselves that while technology can provide new capabilities the strategic equation is not necessarily driven by technological innovation *Congressional Record* United States. Congress,2000
