Military Technology Military Strategy And The Arms Race:

Military Technology, Military Strategy, and the Arms Race Marek Thee, 1986 Controlling the arms race is a major challenge facing the world at present This book argues that a principal factor contributing to the arms race is the military research and development sector It traces the arms race since World War II and explores the relationship between the emergence of new weapon technology the development of new weapon systems and their impact on strategic thinking

Military Technology, Military Strategy, and the Arms Race Marek Thee, 1985 **Military Technology, Military Strategy and the Arms Race** Marek Thee, 2025-03-03 First published in 1986 Military Technology Military Strategy and the Arms Race argues that a principal factor contributing to the arms race is the military research and development R and D sector It traces the arms race since World War II and explores the relationship between the emergence of new weapon technology the development of new weapon systems and their impact on strategic thinking It considers the positions for both the United States and its allies in NATO and for the erstwhile Soviet Union It argues that military R and D which consumes an increasing proportion of total funds spent on R and D has developed a self sustaining technological momentum which is baked by a powerful military industrial bureaucratic technological complex and is increasingly out of control of political leaders The book argues that negotiations to limit the numbers of weapons fail to address the main problem and that more emphasis should be given to considering ways of limiting and controlling military R and D It concludes by proposing a radical shift in policy to achieve this This historical reference work is important for scholars and researchers of military studies defence studies international relations diplomacy and international politics **Military Technology, Armaments**

Dynamics and Disarmament Hans Gunter Brauch, 1989-01-13 An Introduction to Strategic Studies Barry Buzan, 1987-09-04 An Introduction to Strategic Studies addresses some of the major questions that govern both international relations and human survival This book provides a comprehensive introduction to the core concepts of contemporary strategic thinking It argues that strategic studies is about the impact of military technology on relations between states and that its specialised contribution must always be seen within the broader context of international economic and political relations

Weapons Don't Make War Colin S. Gray, 1993 Weaponry does not equal strategy argues Colin Gray but the two are often confused resulting in such linguistic errors as strategic weapons There may be an interactive relationship between policy strategy and weaponry but he contends policy and strategy always take the front seat *Innovation and the Arms Race* Matthew Evangelista, 2023-08-15 Innovation and the Arms Race investigates the causes and mechanisms of the technological arms race between the United States and the Soviet Union Challenging the commonly held notion that Soviet weapons innovation processes simply mirror those of the United States Matthew Evangelista shows that the United States usually leads in introducing new military technology while the Soviets typically react to American initiatives Evangelista bases his study of pivotal nuclear weapons development decisions on a variety of US and USSR primary sources including the

memoirs of weapons designers and scientists declassified intelligence analyses Soviet Academy of Science documents and Nikita Khrushchev's taped reminiscences He finds that in the United States impetus for innovation comes from the bottom at the initiative of corporate or government researchers and military officials whereas the centralized Soviet system produces innovations from the top in response to foreign developments A revelatory analysis of US military policy Soviet American relations and weaponry development Innovation and the Arms Race bears lessons for the study of great power competition and military innovation today *Quantum Technologies and Military Strategy* Ajey Lele, 2021-04-12 This book is about the strategic relevance of quantum technologies It debates the military specific aspects of this technology Various chapters of this book cohere around two specific themes The first theme discusses the global pattern of ongoing civilian and military research on quantum computers quantum cryptography quantum communications and quantum internet The second theme explicitly identifies the relevance of these technologies in the military domain and the possible nature of quantum technology based weapons This thread further debates on quantum arms race at a global level in general and in the context of the USA and China in particular The book argues that the defence utility of these technologies is increasingly becoming obvious and is likely to change the nature of warfare in the future **The Political Economy of the Arms Race** R.T.

Maddock, 1990-06-18 Written by the author of *The Political Economy of Soviet Defence Spending* and co author of *The Growth of the British Economy* this book looks at the international dimension the American and the Soviet defence economy the NATO alliance the Warsaw Pact and the international arms trade *Technology And Change In East-west Relations* F. Stephen Larrabee, F Stephen Larrabee, 2019-07-11 This volume is based on a series of papers delivered at the conference by specialists from the United States and both Eastern and Western Europe It argues that arms control must shift its focus from quantities to qualities of weapons and attempt to constrain military technology *Weapons Under Fire* Lauren Holland, 2013-11-26 First Published in 1997 In an effort to find the validity of middle ground this book offers a comprehensive analysis that looks further than the House Committee on National Security's actions on the B 2 bomber President Clinton's campaign promise to support the Seawolf submarine and the Pentagon's use of a concurrent and risky management strategy for the 71.6 billion F 22 fighter aircraft program It provides a dissection of the decision making process for a representative sample of major weapons systems to invalidate the claims that pork and malfeasance are both pervasive and determinate

The Economics of Defence, Disarmament, and Peace Keith Hartley, Nick Hooper, 1990 This major reference work is a comprehensive critical guide to the large and growing literature on the economics of defence disarmament and peace It covers the cost of defence spending and its effects on growth investment unemployment technical change and other aspects of a nation's economic performance It includes material on the determinants of defence spending namely defence budgets programme budgeting and procurement policy It also deals with the economic impact of arms limitation disarmament and the conversion from military production to products with peaceful uses *Military Strategy*, 1983 **Missile Technology**

Sebastian Farnham, AI, 2025-03-29 *Missile Technology* explores the transformation of missiles from simple rockets into sophisticated precision guided weapons that have redefined modern warfare and global power dynamics. Delving into the evolution of missile technology, the book examines its impact on military strategy, international security, and the ongoing arms race. One intriguing aspect is how early rocketry, initially used for fireworks, became a cornerstone of military might. Another key insight is how the development of intercontinental ballistic missiles (ICBMs) during the Cold War fundamentally altered nuclear deterrence strategies. The book adopts a structured narrative, beginning with the historical roots of rocketry and progressing to the technological leaps of the 20th century, including the German V-2 rocket. It analyzes how missiles are integrated into military doctrine, covering nuclear deterrence, conventional warfare, and counter-terrorism operations. Finally, it addresses the geopolitical consequences, such as missile proliferation, new missile powers, and the challenges of arms control, thereby uniquely connecting technological development, military strategy, and geopolitical implications. **Bulletin of the Atomic Scientists**, 1981-06 The *Bulletin of the Atomic Scientists* is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the *Bulletin's* iconic Doomsday Clock stimulates solutions for a safer world. *Technology and International Relations* Otto Hieronymi, 2015-12-30 *Strategic Thinking, Deterrence and the US Ballistic Missile Defense Project* Reuben Steff, 2016-04-01 A systematic critical survey of American strategic thinking and the strategic culture in which it is formed. In particular, this book seeks to interrogate the theory and strategy of nuclear deterrence and its relationship to the concept of missile defence. Drawing widely on the theoretical literature in international relations and strategic studies, it identifies the key groups that have competed over America's nuclear policy post 1945 and examines how the concept of missile defence went through a process of gestation and intellectual contestation, leading to its eventual legitimization in the late 1990s. Steff sheds light on the individuals, groups, institutions, and processes that led to the decision by the Bush administration to deploy a national missile defence shield. Additionally, Steff systematically examines the impact deployment had on the calculations of Russia and China. In the process, he explains that their reactions under the Bush administration have continued into the Obama era, revealing that a new great power security dilemma has broken out. This, Steff shows, has led to a decline in great power relations as a consequence. *Conversion of Military R&D* Joseph Rotblat, Judith Reppy, Vsevolod Avduyevsky, John Holdren, 2016-07-27 The book describes the scale, benefits, and costs of military research and development. It discusses the process of converting military R&D to civilian applications and examines specific opportunities for and obstacles to conversion in the USA, Russia, France, Germany, and the UK. Among a number of case studies, senior scientists from US and Russian nuclear weapons laboratories debate the futures for these massive complexes. Looking to the future, the dual military-civilian nature of technology is discussed. **The End of Strategic Stability?** Lawrence Rubin, Adam N. Stulberg, 2018-09-03 During the Cold War, many believed that the superpowers shared a conception of strategic stability: a coexistence where both

sides would compete for global influence but would be deterred from using nuclear weapons In actuality both sides understood strategic stability and deterrence quite differently Today s international system is further complicated by more nuclear powers regional rivalries and nonstate actors who punch above their weight but the United States and other nuclear powers still cling to old conceptions of strategic stability The purpose of this book is to unpack and examine how different states in different regions view strategic stability the use or non use of nuclear weapons and whether or not strategic stability is still a prevailing concept The contributors to this volume explore policies of current and potential nuclear powers including the United States Russia China India Iran Israel Pakistan and Saudi Arabia This volume makes an important contribution toward understanding how nuclear weapons will impact the international system in the twenty first century and will be useful to students scholars and practitioners of nuclear weapons policy
