Production and Processing Technology D. K. Thompkinson, 2012-01-01 Dairying is an integral part of the diverse system of agriculture that prevails in India and therefore plays a vital role in agricultural economy and food Production of the country It provides essential food value in the form of milk and milk products to the millions of the country s inhabitants Dairying is the major source of Income for the rural masses as about 70% of the population comprises of small marginal and br Landless farmers who benefit directly from dairying activities India has about 15% of the global cattle population 56% of the world s buffalo population and accounts for 15 16% of the word s annual milk production The growth in milk production is about 4% India stands tall among the milk producing countries with an annual production of about 120 million metric tons though the organized sector handles only about 30% of the total milk produced The authors with their strengths of academics and research in the discipline of dairy technology have been involved in developing manpower for the dairy industry and imparting training at an Institute of National repute This book is the result of their strong feeling of the need to compile information and integrate traditional and novel technologies that exist worldwide in the processing of liquid milk The book has been organized in various chapters that include the history of dairy development in India procurement and consumption pattern of milk processing quality assurance and packaging of fluid milk products and food safety laws The authors hope that this work will serve the students of dairy technology in the country and also provide a ready reference to the teachers involved in shaping the human Resource needs of the Indian dairy industry

Emerging Dairy Processing Technologies

Nivedita Datta, Peggy M. Tomasula, 2015-07-01 Fluid milk processing is energy intensive with high financial and energy costs found all along the production line and supply chain Worldwide the dairy industry has set a goal of reducing GHG emissions and other environmental impacts associated with milk processing Although the major GHG emissions associated with milk production occur on the farm most energy usage associated with milk processing occurs at the milk processing plant and afterwards during refrigerated storage a key requirement for the transportation retail and consumption of most milk products Sustainable alternatives and designs for the dairy processing plants of the future are now being actively sought by the global dairy industry as it seeks to improve efficiency reduce costs and comply with its corporate social responsibilities Emerging Dairy Processing Technologies Opportunities for the Dairy Industry presents the state of the art research and technologies that have been proposed as sustainable replacements for high temperature short time HTST and ultra high

temperature UHT pasteurization with potentially lower energy usage and greenhouse gas emissions These technologies include pulsed electric fields high hydrostatic pressure high pressure homogenization ohmic and microwave heating microfiltration pulsed light UV light processing and carbon dioxide processing The use of bacteriocins which have the potential to improve the efficiency of the processing technologies is discussed and information on organic and pasture milk which consumers perceive as sustainable alternatives to conventional milk is also provided This book brings together all the available information on alternative milk processing techniques and their impact on the physical and functional properties of milk written by researchers who have developed a body of work in each of the technologies This book is aimed at dairy scientists and technologists who may be working in dairy companies or academia It will also be highly relevant to food processing experts working with dairy ingredients as well as university departments research centres and graduate students

Green Technologies in Food Production and Processing Joyce Boye,Yves Arcand,2012-01-11 This book will review the current status of the agriculture and agri food sector in regard to green processing and provide strategies that can be used by the sector to enhance the use of environmentally friendly technologies for production processing The book will look at the full spectrum from farm to fork beginning with chapters on life cycle analysis and environmental impact assessment of different agri food sectors This will be followed by reviews of current and novel on farm practices that are more environmentally friendly technologies for food processing that reduce chemical and energy use and emissions as well as novel analytical techniques for R D and QA which reduce solvent chemical and energy consumption Technologies for waste treatment reducing reusing recycling and better water and energy stewardship will be reviewed In addition the last section of the book will attempt to look at technologies and processes that reduce the generation of process induced toxins e g trans fats acrylamide D amino acids and will address consumer perceptions about current and emerging technologies available to tackle these processing and environmental issues *Milk Production and Processing* Henry F. Judkins,Harry A. Keener,1960
