The Borders of Normal Manuel Matas, M.D., 2017-08-10 DREAMS THAT COME TRUE TELEPATHY ESP VISIONS PREMONITIONS NEAR DEATH AND OUT OF BODY EXPERIENCES Most of us have heard stories of these unusual phenomena as told by millions of people throughout history and across cultures Or perhaps we have experienced them ourselves and we are still grappling with their validity in a world of empirical science and psychiatry that deems anything unseen or spiritual as impossible weird or even disturbed The stigma surrounding the paranormal prevents us from exploring the possibility that there are perhaps events that occur outside the realm of human comprehension inoculating us against the lessons and spiritual significance these events might hold As an experienced psychiatrist Dr Manuel Matas is very familiar with the science of the human brain as well as the possibilities that exist beyond the known borders of consciousness He has never been a classic rationalist as he himself has experienced phenomena that defy logic and the explanations of Western medicine In The Borders of Normal Dr Matas reveals just how accepted and studied many of these phenomena are providing a compelling overview of influential thinkers who have over the years recognized events and experiences that fall outside the realm of current scientific thought As a proponent of a nuanced respectful approach that lies between belief and scepticism Dr Matas helps us to view paranormal experiences as normal and indeed endemic to the human species for it is in this space of the unknown that we may learn more about ourselves each other and the bodies and worlds that we inhabit

Health Psychology: A Textbook Ogden,

Jane, 2012-05-01 Jane Ogden's Health Psychology is a smart and readable textbook that should appeal to both instructors and students of health psychology. Its overall structure is intuitively appealing and progresses from health beliefs to factors associated with becoming ill to the actual state of being ill. New to this edition is a wonderful chapter on the demographics of health and health behaviours. Using a number of striking graphs, Ogden highlights the disparities in health by geography, social class, and gender. The book's greatest appeal, however, is its focus on the major ideas in health psychology. The reader is not bombarded with subtleties of dozens of studies; rather, the broader theories are emphasized. Whether you come to health psychology with a background in social, clinical, physiological, or other specialization, you will find this to be a compelling book.

James W. Pennebaker, Regents Centennial Professor of Psychology, University of Texas at Austin, USA. This 5th edition of Health Psychology represents an even more attractive book than the previous editions. The new figures and images illustrate the text, and students are provided with clear, up-to-date and accessible information on the major theoretical and empirical issues in health psychology. There are four new chapters, and the one on health promotion is particularly impressive. The book now seems suited not only to health psychology students but also for those in allied professions such as physiotherapists, nurses, dietitians, physicians, and medical students.

Ad A. Kaptein, Professor of Medical Psychology, Leiden University Medical Centre, the Netherlands. This thought-provoking book is in tune with students' questions about health psychology and places the student at the centre of knowledge dissemination.

Dr Catherine Sykes, Team Leader in Health Psychology, City University, London. Jane Ogden manages to write in an uncomplicated manner but without doing injustice to the complexities of the theories and research being described. She provides good historical and societal contexts for the different strands of research so students can appreciate the relevance of Health Psychology in and for the real world.

Roger Ingham, Professor of Health and Community Psychology, University of Southampton. Jane Ogden's Health Psychology is an impressive introduction to the field. The book is suitable for students of all backgrounds wishing to gain a comprehensive introduction to the exciting field of health psychology. The chapters are clearly organized and integrate the latest international research findings into an easy-to-read and well-illustrated textbook.

Keith J. Petrie, Professor of Health Psychology, Department of Psychological Medicine, University of Auckland. Thoroughly revised to reflect recent research, theory, and practice in health psychology, this market bestseller includes new coverage of topical issues such as behaviour change strategies, health inequalities, exercise, dependence, caffeine use, and men's health. Now organized into five sections, the book follows a health illness continuum model covering theory and research relating to the context of health, health beliefs and behaviours, becoming ill, and being ill, with the final section describing how students can learn to think more critically about all aspects of health psychology. The new edition also includes five new chapters. Health inequalities depicts health variation by gender, social class, and geography and describes possible explanations for this. Health promotion describes a wide range of theories and strategies used to change behaviour, including CBT, motivational interviewing, relapse prevention, fear appeals, and the use of technology. Health

access examines patient contact with health professionals with a focus on help seeking behaviour and delay screening communication and adherence Men s health explores gender differences in life expectancy and causes of mortality men s health related behaviours their health beliefs social norms of masculinity and emotional expression Being critical offers a detailed analysis of how to be more critical with a focus on thinking about theory constructs methodology and measurement Many brand new examples are introduced covering post traumatic stress symptoms exercise and Chronic Fatigue Syndrome post traumatic growth and benefit finding measurement issues for adherence eating exercise social support and coping visualization and illness cognitions and the response shift Health Psychology 5th edition is essential reading for all students and researchers of health psychology It will also be invaluable to students of medicine nursing and allied health An Online Learning Centre website www.openup.co.uk ogden accompanies this edition with useful materials for students of health psychology and their lecturers including PowerPoint presentations artwork and a new Testbank

The Age of Stress Mark Jackson,2016-11-17 We are living in a stressful world yet despite our familiarity with the notion stress remains an elusive concept In The Age of Stress Mark Jackson explores the history of scientific studies of stress in the modern world In particular he reveals how the science that legitimates and fuels current anxieties about stress has been shaped by a wide range of socio political and cultural as well as biological factors stress he argues is both a condition and a metaphor In order to understand the ubiquity and impact of stress in our own times or to explain how stress has commandeered such a central place in the modern imagination Jackson suggests that we need to comprehend not only the evolution of the medical science and technology that has gradually uncovered the biological pathways between stress and disease in recent decades but also the shifting social economic and cultural contexts that have invested that scientific knowledge with meaning and authority In particular he argues we need to acknowledge the manner in which enduring concerns about the effects of stress on mental and physical health are the product of broader historical preoccupations with the preservation of personal and political as well as physiological stability

The Doctor-Patient Relationship and the Nineteenth-Century French Novel Sarah Jones,2025-03-29 The Doctor Patient Relationship and the Nineteenth Century French Novel analyses the representation of the doctor patient relationship in the nineteenth century French novel notably in the words of Balzac Sand Stendhal and Zola It argues that the doctor patient relationship is represented in these novels as a site of interpersonal negotiation wherein the meaning of medical authority embodied experience and the spectre of illness and pain are mediated and reimagined This book highlights how the doctor patient relationship is often idealized by the novel wherein the doctor is characterised as a both dedicated to his patients and local community as well as being a God like master of life death and medical knowledge The volume suggests that the doctor patient encounter is often depicted as a separate although inherently related concept that undermines this idealisation of medical relationships The doctor patient encounter thereby questions the hegemonic power of medical practitioners over their patients by pointing towards how novels depict patients as resisting and even manipulating their doctors The book identifies and explores other important themes within the doctor patient relationship such as the medical gaze regard m dical power relationships and the use of embodied metaphor In particular the book highlights how the doctor patient relationship is often a confrontation between scientific knowledge and the experience of gender and disability The book s conceptual framework is derived from the critical medical humanities and the volume revitalises and reframes the doctor patient relationship by considering the intrinsic slippage between idealised relationships and critical encounters The book uses close readings of its corpus to understand how medical practice is debated and undermined concurrently with its idealisation It places literary works within a new historical context by reading across novels within their medical and scientific context and situates them for the first time in the intellectual context of the critical medical humanities The book points forward to how nineteenth century French novels can reform how the critical medical

humanities views the medical relationship and the potential impact on real world patients
