**Mind and Variability** Patrick McNamara, 1999-06-30 Mental Darwinism a new approach to the study of mental phenomena applies selectionist ideas to problems of mind and behavior McNamara challenges the instructivist view that memories occur when information from the environment is transferred into the mind Current experimental evidence confirms the insights of two turn of the century philosophers William James and Henri Bergson who originally proposed applying Darwinian principles to mental processes The view of the mind that emerges from this approach helps us understand why memory evolves as it does and is not always accurate or veridical how memory is related to personal identity and how a large number of neuropsychological disorders develop

**Bergson and History** Leon ter Schure, 2019-10-01 Explores the philosophy of history of Henri Bergson and shows its relevance to contemporary historical thought Henri Bergson is famous for his explorations of time as duration yet he rarely referred to history in his writings Simultaneously historians and philosophers of history have generally disregarded Bergson's ideas about the nature of time Modernity has brought change at an ever accelerating rate and one of the results of this has been a tendency toward presentism Only the here and now matters as past and future have been absorbed by the omnipresent present of the digital age In highlighting the role of history in the work of Bergson Bergson and History shows how his philosophy of life allows us to revise the modern conception of history Bergson's philosophy situates history within a broader framework of life as a creative becoming allowing us to rethink important topics in the study of history such as historical time the survival of the past and historical progress Bergson and History is groundbreaking and merits a wide readership in the humanities and social sciences It is full of fresh and original insights Ter Schure has read widely and deeply and there is a productive engagement throughout the

book with contemporary resources Keith Ansell Pearson author of *Bergson Thinking Beyond the Human Condition* The Evolutionary Neuroethology of Paul MacLean Gerald A. Cory Jr., Russell Gardner Jr., 2002-12-30 In the mid 20th century integrative efforts began concerning the brain and its social and humanistic functions These efforts were led by Paul D MacLean s integrative research and thought As the century ended however such efforts were lost in the surge of new effort in brain and genome research Nobel Prizes were awarded on biochemical and cellular findings relevant to psychiatry Findings on these levels seemed to provide ultimate answers By contrast Cory Gardner and their contributors provide a more comprehensive view by extending MacLean s findings and integrative theory Supported by new findings and extended by critical analyses of current work the collection provides foundations for more integrative efforts that the editors and contributors believe will prevail increasingly in coming decades Looked at from another vantage point therapeutic social economic and political sciences have proceeded without operating theories congruent with or based on brain functions Across species perspectives have been lacking This collection redresses this problem and leads the way toward more comprehensive 21st century research on the one hand and practical applications on the other Multiple approaches extend from modeling efforts to across species comparisons to the basic science of psychiatry to theoretical explanations of political and economic systems But most important these essays abolish the Berlin wall that currently separates the brain from its social functions A major guide for scholars students and researchers involved in the neurobehavioral sciences for psychologists psychiatrists and others involved with human clinical sciences and for social scientists concerned with the impact of the nervous system and its function *Religion in Mind* Jensine Andresen, 2001-06-28 *Religion in Mind* is a 2001 text which summarizes and extends the advances in the cognitive study of religion throughout the 1990s It uses empirical research from psychology and anthropology to illuminate various components of religious belief ritual and experience The book examines cognitive dimensions of religion within a naturalistic view of culture while respecting the phenomenology of religion and drawing together teachers of religion psychologists of religion and cognitive scientists Expert contributors focus on phenomena such as belief fixation and transmission attributions of agency anthropomorphizing counterintuitive religious representations the well formedness of religious rituals links between religious representations and emotions and the development of god concepts The work encourages greater interdisciplinary linkages between scholars from different fields and will be of interest to researchers in anthropology psychology sociology history philosophy and cognitive science It also will interest more general readers in religion and science **Bergson** Keith Ansell Pearson, 2018-02-22 A thought provoking contribution to the renaissance of interest in Bergson this study brings him to a new generation of readers Ansell Pearson contends that there is a Bergsonian revolution an upheaval in philosophy comparable in significance to those that we are more familiar with from Kant to Nietzsche and Heidegger that make up our intellectual modernity The focus of the text is on Bergson s conception of philosophy as the discipline that seeks to think beyond the human condition Not that we are caught up in an

existential predicament when the appeal is made to think beyond the human condition rather than restricting philosophy to the human condition fails to appreciate the extent to which we are not simply creatures of habit and automatism but also organisms involved in a creative evolution of becoming

Ansell Pearson introduces the work of Bergson and core aspects of his innovative modes of thinking examines his interest in Epicureanism explores his interest in the self and in time and memory presents Bergson on ethics and on religion and illuminates Bergson on the art of life

*Eugenics* Richard Lynn, 2001-06-30 Lynn argues that the condemnation of eugenics in the second half of the 20th century went too far and offers a reassessment The eugenic objectives of eliminating genetic diseases increasing intelligence and reducing personality disorders he argues remain desirable and are achievable by human biotechnology In this four part analysis Lynn begins with an account of the foundation of eugenics by Francis Galton and the rise and fall of eugenics in the twentieth century He then sets out historical formulations on this issue and discusses in detail desirability of the new eugenics of human biotechnology After examining the classic approach of attempting to implement eugenics by altering reproduction Lynn concludes that the policies of classical eugenics are not politically feasible in democratic societies The new eugenics of human biotechnology prenatal diagnosis of embryos with genetic diseases embryo selection and cloning may be more likely than classic eugenics to evolve spontaneously in western democracies Lynn looks at the ethical issues of human biotechnologies and how they may be used by authoritarian states to promote state power He predicts how eugenic policies and dysgenic processes are likely to affect geopolitics and the balance of power in the 21st century Lynn offers a provocative analysis that will be of particular interest to psychologists sociologists demographers and biologists concerned with issues of population change and intelligence

**Inner Theatres of Good and Evil** Mark Pizzato, 2014-01-10 Among the most intriguing questions of neurology is how conceptions of good and evil arise in the human brain In a world where we encounter god like forces in nature and try to transcend them the development of a neural network dramatizing good against evil seems inevitable This critical book explores the cosmic dimensions of the brain s inner theatre as revealed by neurology cognitive science evolutionary psychology psychoanalysis primatology and exemplary Western performances In theatre film and television supernatural figures express the brain s anatomical features as humans transform their natural environment into cosmic and theological spaces in order to grapple with their vulnerability in the world

**IQ and the Wealth of Nations** Richard Lynn, Tatu Vanhanen, 2002-02-28 Lynn and Vanhanen test the hypothesis on the causal relationship between the average national intelligence IQ and the gap between rich and poor countries by empirical evidence Based on an extensive survey of national IQ tests the results of their work challenge the previous theories of economic development and provide a new basis to evaluate the prospects of economic development throughout the world They begin by reviewing and evaluating some major previous theories The concept of intelligence is then described and

intelligence quotient IQ introduced Next they show that intelligence is a significant determinant of earnings within nations and they connect intelligence with various economic and social phenomena The sociology of intelligence at the level of sub populations in nations is examined and the independent national IQ and dependent various measures of per capita income and economic growth rates variables are defined and described They then provide empirical analyses starting from the 81 countries for which direct evidence of national IQs is available the analysis is then extended to the world group of 185 countries The hypothesis is tested by the methods of correlation and regression analyses The results of statistical analyses support the hypothesis strongly The results of the analyses and various means to reduce the gap between rich and poor countries are discussed A provocative analysis that all scholars students and researchers involved with economic development need to confront Vestiges of a Philosophy John Ó Maoilearca,2022-11-01 Vestiges of a Philosophy Matter

the Meta Spiritual and the Forgotten Bergson covers a fascinating yet little known moment in history At the turn of the twentieth century Henri Bergson and his sister Mina Bergson also known as Moina Mathers were both living in Paris and working on seemingly very different but nonetheless complementary and even correlated approaches to questions about the nature of matter spirit and their interaction He was a leading professor within the French academy soon to become the most renowned philosopher in Europe She was his estranged sister already celebrated in her own right as a feminist and occultist performing on theatre stages around Paris while also leading one of the most important occult societies of that era the Hermetic Order of the Golden Dawn One was a respectable if controversial intellectual the other was a notorious mystic artist who together with her husband and fellow occultist Samuel MacGregor Mathers have been described as the neo pagan power couple of the Belle poque Neither Henri nor Mina left any record of their feelings and attitudes towards the work of the other but their views on time mysticism spirit and art converge on many fronts even as they emerged from very different forms of cultural practice In Vestiges of a Philosophy John Maoilearca examines this convergence of ideas and uses the Bergsons strange correlation to tackle contemporary themes in new materialist philosophy as well as the relationship between mysticism and philosophy Philosophy and the Adventure of the Virtual Keith Ansell-Pearson,Keith Ansell

Pearson,2002-08-27 This lucid collection of essays the continental analytic divide bringing the virtual to centre stage and arguing its importance for re thinking such central philosophical questions as time and life **Art Disarming Philosophy** Steven Shakespeare,Niamh Malone,, Gary Anderson,2021-09-23 Non philosophy poses a challenge to philosophical thought inspired by the work of Fran ois Laruelle It questions the idea that philosophy or other disciplines can tell us what it means to think This edited collection brings together an internationally known and interdisciplinary group of scholars including a major new essay by Laruelle himself Together they use non philosophy to cross the boundaries between philosophy and performance Philosophers have been busy for centuries looking for the foundations of truth value and reality They try to say what it all means and how it all fits together Areas of life like science and art have to wait for the philosopher to show up to

tell them what they are really about Theory dictates meaning performance just puts it into effect Non philosophy is different It says that reality is not an object out there that we can think and understand The Real is the place we stand it is where we think from Crucially non philosophy understands philosophy itself to be performative It enacts modes of thinking that do not dominate the material of thought and do not capture the Real in concepts Philosophy is mutated by its performances and performances themselves think are modes of theory What happens when we bring philosophy art and performance together without hierarchy How can they get inside and change one another The thinkers in this collection answer these pressing questions

*Dreams and Modernity* Natalya Lusty,Helen Groth,2013-08-29 *Dreams and Modernity A Cultural History* explores the dream as a distinctively modern object of inquiry and as a fundamental aspect of identity and culture in the nineteenth and early twentieth century While dreams have been a sustained object of fascination from the ancient world to the present what sets this period apart is the unprecedented interest in dream writing and interpretation in the psychological sciences and the migration of these ideas into a wide range of cultural disciplines and practices Authors Helen Groth and Natalya Lusty examine how the intensification and cross fertilization of ideas about dreams in this period became a catalyst for new kinds of networks of knowledge across aesthetic psychological philosophical and vernacular domains In uncovering a complex and diverse archive *Dreams and Modernity* reveals how the explosion of interest in dreams informed the psychic imaginative and intimate life of the modern subject Individual chapters in the book explore popular traditions of dream interpretation in the 19th century the archival impetus of dream research in this period including the Society for Psychical Research and the Mass Observation movement and the reception and extension of Freud's dream book in Britain in the early decades of the twentieth century This engaging interdisciplinary book will appeal to both scholars and upper level students of cultural studies cultural history Victorian studies literary studies gender studies and modernist studies
