Mekala S Rao, Minds and Gods Todd Tremlin,2006-03-02 Around the world and throughout history in cultures as diverse as ancient Mesopotamia and modern America human beings have been compelled by belief in gods and developed complex religions around them But why What makes belief in supernatural beings so widespread And why are the gods of so many different people so similar in nature This provocative book explains the origins and persistence of religious ideas by looking through the lens of science at the common structures and functions of human thought The first general introduction to the cognitive science of religion Minds and Gods presents the major themes theories and thinkers involved in this revolutionary new approach to human religiosity Arguing that we cannot understand what we think until we first understand how we think the book sets out to study the evolutionary forces that modeled the modern human mind and continue to shape our ideas and actions today Todd Tremlin details many of the adapted features of the brain illustrating their operation with examples of everyday human behavior and shows how mental endowments inherited from our ancestral past lead many people to naturally entertain religious ideas In short belief in gods and the social formation of religion have their genesis in biology in powerful cognitive processes that all humans share In the course of illuminating the nature of religion this book also sheds light on human nature why we think we do the things we do and how the reasons for these things are so often hidden from view This discussion ranges broadly across recent scientific findings in areas such as paleoanthropology primate studies evolutionary psychology early brain development and cultural transmission While these subjects are complex the story is told here in a conversational style that is engaging jargon free and accessible to all readers With Minds and Gods Tremlin offers a roadmap to a fascinating and growing field of study one that is sure to generate interest and debate and provide readers with a better understanding of themselves and their beliefs **The Mind'S Eye** Lawrence A. In the Mind's Eye Mary A. Peterson, Barbara Gillam, H. A. Sedgwick, 2007-01-04. How can we best describe the processes by which we visually perceive our environment? Contemporary perceptual theory still lacks a coherent theoretical position that encompasses both the limitations on the information that can be retained from a single eye fixation and the abundant phenomenal and behavioral evidence for the perception of an extended and coherent world. As a result, many leading theorists and researchers in visual perception are turning with new or renewed interest to the work of Julian Hochberg. For over 50 years, in his own experimental research, in his detailed consideration of examples drawn from a wide range of visual experiences and activities, and most of all, in his brilliant and sophisticated theoretical analyses, Hochberg has persistently engaged with the myriad problems inherent in working out the kind of coherent theoretical position the field currently lacks. The complexity of his thought and the wide range of areas into which Hochberg has pursued the solution to this central

problem have however limited both the accessibility of his work and the appreciation of his accomplishment In this volume we seek to bring the full range of Hochberg s work to the attention of a wider audience by offering a selection of his key works many taken from out of print or relatively inaccessible sources To facilitate the understanding of his accomplishment and of what his work has to offer to contemporary researchers and theorists in visual perception we include commentaries on salient aspects of his work by 20 noted researchers In the *Mind s Eye* will be of interest to researchers working on topics such as perceptual organization visual attention space perception motion perception visual cognition the relationship between perception and action picture perception and film who are striving to obtain a deeper understanding of their own fields and who want to integrate this understanding into a broader unified view of visual perceptual processing
