

Do we have free will?

Free will

Our next topic will be on the existence of free will.

What is free will?

First, what do we mean by the will?

In this context, will is usually used to pick out a particular sort of cognitive ability or set of abilities:

- Choosing actions
- Fixing one's intentions or plans
- Directing one's attention or thoughts
- Accepting or rejecting certain options

Descartes (for instance) thought of the will as a sort of universal "yes/no" mechanism

So what does it mean for the will to be free?

Think about some contrast cases:

- Being forced by threat of physical force to do something
- Mind control/hypnotism
- Brainwashing

To a first approximation: one exercises free will when one's will is not being controlled or forced by some external means.

Intuitively, free will is deeply important for our judgments of moral responsibility.

- It seems pretty clear that in cases of mind control or brainwashing the subject is not responsible for their actions.
- The intuitive idea is that these actions were, in some important sense, "out of their control."

Suppose someone gets drunk. Then, while blacked-out drunk they:

- Sleep with their best friend's partner
- Steal from a convenience store
- Punch a police officer.

Are they morally culpable for these actions?

- They didn't really know what you were doing
- They lacked the relevant kind of control over their actions.
- Why are they still responsible?
- Because they had control over whether or not they got drunk in the first place!
- But what if they didn't? What if they were forced to drink, or their drinks were spiked without their knowledge?
- Or what if their decision to drink was pre-determined by their brain chemistry or even the laws of physics?

Determinism

What if the universe is like this:

- There are some fundamental physical particles/properties governed entirely by a set of universally applicable physical laws.
- All movements and changes to these fundamental particles are dictated by these laws.
