Myers, 2009-11 Over the past two to three hundred years humanity's ecological footprint has ballooned to such an extent that we are now fundamentally altering the planet We have transformed the Earth's land surface and altered the function of its ecosystems and we are triggering the rapid loss of both terrestrial and marine life We are also profoundly changing our planet's climate It is increasingly apparent that the breadth and depth of the changes we are wreaking on the environment

are imperiling not only many of the other species with which we share the ecological stage but the health and wellbeing of our own species as well. Global climate change threatens human health in numerous and profound ways. Large segments of the population will experience more heat waves, altered exposure to infectious disease and more frequent natural disasters. Most significantly, climatic disruption threatens the adequacy of the core building blocks of health for large populations around the globe: sufficient food and nutrition, safe water for drinking and sanitation, fresh air to breathe and secure homes to live in. As climate change dismantles these central elements of healthy societies, people with fewer resources will be forced to migrate in large numbers to lands where they may not be welcome. A likely result of all of these processes will be increased civic instability and strife.

Problem-Solving Exercises in Green and Sustainable Chemistry Albert S. Matlack, Andrew P. Dicks, 2015-11-05. When confronted with a problem in science, the way to proceed is not always obvious. The problem may seem intractable or there may be many possible solutions, with some better than others. *Problem Solving Exercises in Green and Sustainable Chemistry* teaches students how to analyze and solve real world problems that occur in an environmental context.

Materials Matter Ken Geiser, 2001-05-25. The products we purchase and use are assembled from a wide range of naturally occurring and manufactured materials. But too often we create hazards for the ecosystem and human health as we mine, process, distribute, use and dispose of these materials. Until recently, most research has focused on the waste end of material cycles. This book argues that the safest and least costly point at which to avoid environmental damage is when materials are first designed and selected for use in industrial production. *Materials Matter* presents convincing evidence that we can use fewer materials and eliminate the use of many toxic chemicals by focusing directly on material chemical use when products are designed. It also shows how manufacturers can save money by increasing the effectiveness of material use and reducing the use of toxic chemicals. It advocates new directions for the material sciences and government policies on materials. And it argues that manufacturers, suppliers and customers need to set more socially responsible policies for products and services to achieve higher environmental and health goals.

Resetting the Compass David Yencken, Debra Wilkinson, 2001-11-05. *Resetting the Compass: Australia's Journey Towards Sustainability* Updated Edition sets out Australia's environmental problems in their global context and explains what is now needed to fix them. It also illustrates how ecological sustainability can be achieved together with economic, social and cultural sustainability. The book examines the pressures on our environment from population growth, consumption patterns and technological change. The specific actions needed to deal with each of the problems identified are described in detail. This Edition includes Assessments from the Intergovernmental Panel on Climate Change, Figures related to Australia's emissions from the National Greenhouse Gas Inventory, Assessments of conditions and trends from the National Land and Water Audit, Estimates of the volume of vegetation clearing and new information on wind farms. This book is essential reading for politicians and public servants, business leaders and managers, environmentalists, academics and students in environmental courses and all those interested in environmental issues.

Institute, 2014-04-08. State of the World 2004 takes a fresh look at the trends that have put the global economy on a collision course with the Earth's ecosystems. This year's edition has a special focus on the theme of consumption. It questions whether a less consumptive society is possible and concludes that it is essential. The book explores overconsumption as a by product of affluence and underconsumption linked to poverty and provides behind the scenes exposes of the devastating environmental impacts of some of our most popular products from plastic bags to paper to mobile phones. Matlack, 2022-03-10 Interest in green chemistry and clean processes has grown so much in recent years that topics such as fluororous biphasic catalysis metal organic frameworks and process intensification which were barely mentioned in the First Edition have become major areas of research In addition government funding has ramped up the development of fuel cells and biofuels This reflects the evolving focus from pollution remediation to pollution prevention Copiously illustrated with more than 800 figures the Third Edition provides an update from the frontiers of the field It features supplementary exercises at the end of each chapter relevant to the chemical examples introduced in each chapter Particular attention is paid to a new concluding chapter on the use of green metrics as an objective tool to demonstrate proof of synthesis plan efficiency and to identify where further improvements can be made through fully worked examples relevant to the chemical industry NEW
