Sobel,2022-09-20

An examination of children's causal reasoning capacities and how those capacities serve as the foundation of their scientific thinking. Young children have remarkable capacities for causal reasoning which are part of the foundation of their scientific thinking abilities. In *Constructing Science*, Deena Weisberg and David Sobel trace the ways that young children's sophisticated causal reasoning abilities combine with other cognitive, metacognitive, and social factors to develop into a more mature set of scientific thinking abilities. Conceptualizing scientific thinking as the suite of skills that allows people to generate hypotheses, solve problems, and explain aspects of the world, Weisberg and Sobel argue that understanding how this capacity develops can offer insights into how we can become a more scientifically literate society. Investigating the development of causal reasoning and how it sets the stage for scientific thinking in the elementary school years and beyond, Weisberg and Sobel outline a framework for understanding how children represent and learn causal knowledge and identify key variables that differ between causal reasoning and scientific thinking. They present empirical studies suggesting ways to bridge the gap between causal reasoning and scientific thinking, focusing on two factors: contextualization and metacognitive thinking abilities. Finally, they examine children's explicit understanding of such concepts as science learning, play, and teaching.

International Handbook on Giftedness, Larisa Shavinina, 2009-08-12. If you publish, you are trying to create something that is original, that stands out from the crowd. Above all, you want to create something you are proud of. Richard Branson, 2002, p. 57. After the publication of my bestselling *International Handbook on Innovation*, publishers from around the world began to invite me to work on new books with them. When Springer invited me to prepare the *International Handbook on Giftedness*, I was on a maternity leave with my 3-month-old and my 5-year-old was just starting school. I, however, had wanted to prepare such a Handbook for a long time and was waiting for just the right moment to dive right into such an endeavor. The time had come, and I agreed to prepare a Handbook that would expose readers to new views, great discoveries, and significant advancements of scientific knowledge exactly as Richard Feynman advised. See his opening quote at the beginning of the introductory chapter: I have always been convinced of the paramount significance of the topic of giftedness and gifted education to the world as a whole. There is no doubt that gifted individuals are and will be extremely important to society. One way to understand the history of human civilization is via inventions and discoveries of the gifted. All human cultural development builds on the amazing technological, scientific, educational, and moral achievements of the human mind. Today, people increasingly realize that gifted and talented individuals are even more important than in the past. **The United States Catalog**, 1921. **The United States Catalog**, Eleanor E.
