A Very Short Tour of the Mind Michael C. Corballis, 2017-04-25 Thoroughly enjoyable essays from a cognitive neuroscientist filled with surprising facts Kirkus Reviews starred review Modern computers might be faster and whales might have larger brains but neither can match the sheer intellect or capacity for creativity that the human mind enjoys It is arguably the most complex organ in the universe If you've ever wondered why your dog can remember where it buried its bone but you can't find your keys or whether it's true that we use only ten percent of our brainpower this concise book offers some answers and introduces us to what science has learned about the intricacies of the human brain over the last fifty years Leading us through behavioral experiments and neuroscience cognitive theory and Darwinian evolution Michael Corballis punctures a few hot air balloons and explains just what we know and don't know about our own minds Poses questions we wouldn't have thought to ask and then answers them with clarity and wit American Scientist

Mind The Gap: The Labyrinthine Story Of Planetary Orbits, Mathematics, And The Titius-bode Rule Martin Beech, 2023-08-15 This book is concerned with two tightly knit topics those of mathematics and astronomy Its focus is primarily concerned with planetary astronomy and specifically the history of accounting for the spacing of planetary orbits The story begins with the ancient Greek philosophers and continues to the modern era and the new data being gleaned from the study of exoplanetary systems Throughout the text the manner in which mathematical theory has been used to decipher and impose order upon the solar system will be examined Attention and discussion will be directed towards the so called Titius Bode rule a long standing ordering principle that in fact it has no physical underpinning or explanation The story presented will look at how humanity has learned about the workings of the solar system and it will look at the philosophical problems that arise when mathematical exposition leads observation Furthermore the fundamental role of mathematics in the development of physical theory is examined and it is argued that there are some gaps in our knowledge of the solar system and the universe that mathematics and physical theory will never successfully bridge The text will present material at the informed amateur scientist university undergraduate student level
