Limitless Mind Jo Boaler,2019-09-03 Boaler is one of those rare and remarkable educators who not only know the secret of great teaching but also know how to give that gift to others CAROL DWECK author of Mindset Jo Boaler is one of the most creative and innovative educators today Limitless Mind marries cutting edge brain science with her experience in the classroom not only proving that each of us has limitless potential but offering strategies for how we can achieve it LAURENE POWELL JOBS A courageous freethinker with fresh ideas on learning BOOKLIST In this revolutionary book a professor of education at Stanford University and acclaimed math educator who has spent decades studying the impact of beliefs and bias on education reveals the six keys to unlocking learning potential based on the latest scientific findings From the moment we enter school as children we are made to feel as if our brains are fixed entities capable of learning certain things and not others influenced exclusively by genetics This notion follows us into adulthood where we tend to simply accept these established beliefs about our skillsets i e that we don t have a math brain or that we aren t the creative type These damaging and as new science has revealed false assumptions have influenced all of us at some time affecting our confidence and willingness to try new things and limiting our choices and ultimately our futures Stanford University professor bestselling author and acclaimed educator Jo Boaler has spent decades studying the impact of beliefs and bias on education In Limitless Mind she explodes these myths and reveals the six keys to unlocking our boundless learning potential Her research proves that those who achieve at the highest levels do not do so because of a genetic inclination toward any one skill but because of the keys that she reveals in the book Our brains are not fixed but entirely capable of change growth adaptability and rewiring Want to be fluent in mathematics Learn a foreign language Play the guitar Write a book The truth is not only that anyone at any age can learn anything but the act of learning itself fundamentally changes who we are and as Boaler argues so elegantly in the pages of this book what we go on to achieve **A Mind For Numbers** Barbara Oakley, PhD,2014-07-31 The

companion book to COURSERA's wildly popular massive open online course Learning How to Learn Whether you are a student struggling to fulfill a math or science requirement or you are embarking on a career change that requires a new skill set A Mind for Numbers offers the tools you need to get a better grasp of that intimidating material Engineering professor Barbara Oakley knows firsthand how it feels to struggle with math She flunked her way through high school math and science courses before enlisting in the army immediately after graduation When she saw how her lack of mathematical and technical savvy severely limited her options both to rise in the military and to explore other careers she returned to school with a newfound determination to retool her brain to master the very subjects that had given her so much trouble throughout her entire life In A Mind for Numbers Dr Oakley lets us in on the secrets to learning effectively secrets that even dedicated and successful students wish they'd known earlier Contrary to popular belief math requires creative as well as analytical thinking Most people think that there's only one way to do a problem when in actuality there are often a number of different solutions you just need the creativity to see them For example there are more than three hundred different known proofs of the Pythagorean Theorem In short studying a problem in a laser focused way until you reach a solution is not an effective way to learn Rather it involves taking the time to step away from a problem and allow the more relaxed and creative part of the brain to take over The learning strategies in this book apply not only to math and science but to any subject in which we struggle We all have what it takes to excel in areas that don't seem to come naturally to us at first and learning them does not have to be as painful as we might think
