**Phenomenology and the Physical Reality of Consciousness** Arthur Melnick, 2011-08-31 The predominant positive view among philosophers and scientists alike is that consciousness is something realized in brain activity This view however largely fails to capture what consciousness is like according to how it shows itself to conscious beings What this work proposes instead is that consciousness is a phenomenon that exists in and throughout the body Apart from whether or not it involves intentionality and apart from whether or not it involves awareness of the self consciousness is self intimating self revealing self disclosing Self disclosure is the definitive phenomenological character of consciousness in all its forms Taking this stance as a point of departure the book presents a specific account of what bodily field phenomenon consciousness is In this way the current stalemate in philosophy over the question of the physical reality of consciousness is broken Series A

**Survivism** Dr. Scott Hockin, Ph. D.,2023-08-10 Survivism reveals itself primarily within attempts to solve an unsolicited problem and other accompanying encounters thereof Secundarily a movement arises resulting from intelligences deemed necessary to process a vast array of complexities engulfing this otherwise ancient yet modern symbolic Parthenon structure representation hence dynamically riddled with existential change infiltrated throughout a range of time and space What manifests deeply rooted upon its foundational structure are the cornerstone pillars of consciousness emotion rationality and behavior Survivism learns via acquisition of knowledge and experience to grow and develop identities intent to pursue and acquire a higher need of mindfulness shrouded with intellectual guidance and a self determinant personality There too is an equilibrium of functionalities devised to sustain the balance of cognitive flow from within the structural and organizational symbolic complex and then throughout the greater abstract concrescence of social or relational exchanges Survivism maintains motivation to preserve valuation respect negation and comprehensively strive toward actualization Thus survivism remains not only created and exposed of the aforementioned inputs compounded with a metaphysical ideal process but also profoundly thrives and possesses a real purposeful outcome

The Fragmentation of Being Kris McDaniel, 2017-07-28 The Fragmentation of Being offers answers to some of the most fundamental questions in ontology There are many kinds of beings but are there also many kinds of being The world contains a variety of objects each of which let us provisionally assume exists but do some objects exist in different ways Do some objects enjoy more being or existence than other objects Are there different ways in which one object might enjoy more being than another Most contemporary metaphysicians would answer no to each of these questions So widespread is this consensus that the questions this book addressed are rarely even raised let alone explicitly answered But Kris McDaniel carefully examines a wide range of reasons for answering each of these questions with a yes In doing so he connects these questions with many important metaphysical topics including substance and accident time and persistence the nature of ontological categories possibility and necessity presence and absence persons and value ground and consequence and essence and accident In addition to discussing contemporary problems and theories McDaniel also discusses the ontological views of many important figures in the history of philosophy including Aquinas Aristotle Descartes Heidegger Husserl Kant Leibniz Meinong and many more

Gennaro, 2012. A defense of a version of the higher-order thought (HOT) theory of consciousness with special attention to such topics as concepts and animal consciousness. Consciousness is arguably the most important area within contemporary philosophy of mind and perhaps the most puzzling aspect of the world. Despite an explosion of research from philosophers, psychologists, and scientists, attempts to explain consciousness in neurophysiological or even cognitive terms are often met with great resistance. In *The Consciousness Paradox*, Rocco Gennaro aims to solve an underlying paradox: namely, how it is possible to hold a number of seemingly inconsistent views, including higher-order thought (HOT) theory, conceptualism, infant and animal consciousness, concept acquisition, and what he calls the HOT brain thesis. He defends and further develops a metapsychological reductive representational theory of consciousness and applies it to several importantly related problems. Gennaro proposes a version of the HOT theory of consciousness that he calls the wide intrinsicity view and shows why it is superior to various alternatives such as self-representationalism and first-order representationalism. HOT theory says that what makes a mental state conscious is that a suitable higher-order thought is directed at that mental state. Thus, Gennaro argues for an overall philosophical theory of consciousness while applying it to other significant issues not usually addressed in the philosophical literature on consciousness. Most cognitive science and empirical works on such topics as concepts and animal consciousness do not address central philosophical theories of consciousness. Gennaro's integration of empirical and philosophical concerns will make his argument of interest to both philosophers and nonphilosophers. Theory of Categories

Dr. Patrick Grim, Dr. Nicholas Rescher, 2023-09-05. Categorization is an essential and unavoidable instrumentality for conceptually navigating a world; indeed, for being able to conceptualize a world to be navigated. Classification is a pivotal instrument for scientific systemization, featured as a basis for the philosophical understanding of reality since Aristotle, but classificatory concepts of sorts, types, and natural kinds inevitably pervade our understanding of ourselves and our position in the social as well as the natural world at all levels. The authors argue that the character, purpose, context, and culture relativity of categories and categorization have been widely misunderstood; that standard philosophical views are substantially correct in some respects but markedly mistaken in others. The book offers a comprehensive survey of basic principles of classification and categorization, a survey of relevant empirical work, and a multitude of illustrative examples accompanied by instructive analysis of ways and means. The work traces wide-ranging implications of the current approach for philosophical problematic and paradox in philosophy of mind, epistemology, and metaphysics, philosophy of science, social philosophy, and ethics.

**Acquaintance** Jonathan Knowles, Thomas Raleigh, 2019-11-21. Bertrand Russell famously distinguished between

knowledge by acquaintance and knowledge by description For much of the latter half of the twentieth century many philosophers viewed the notion of acquaintance with suspicion associating it with Russellian ideas that they would wish to reject However in the past decade or two the concept has undergone a striking revival in mainstream analytic philosophy acquaintance is it seems respectable again This volume showcases the great variety of topics in philosophy of mind epistemology and philosophy of language for which philosophers are currently employing the notion of acquaintance It is the first collection of new essays devoted to the topic of acquaintance featuring chapters from many of the world's leading experts in this area Opening with an extensive introductory essay which provides some historical background and summarizes the main debates and issues concerning acquaintance the remaining thirteen contributions are grouped thematically into four sections phenomenal consciousness perceptual experience reference and epistemology
