Mindwaves Thoughts On Intelligence Identity And Consciousness:

Mindwaves Colin Blakemore, Susan Greenfield, 1987 **Alienation and Nature in Environmental Philosophy** Simon Hailwood, 2015-08-21 Many environmental scientists scholars and activists characterise our situation as one of alienation from nature but this notion can easily seem meaningless or irrational In this book Simon Hailwood critically analyses the idea of alienation from nature and argues that it can be a useful notion when understood pluralistically He distinguishes different senses of alienation from nature pertaining to different environmental contexts and concerns and draws upon a range of philosophical and environmental ideas and themes including pragmatism eco phenomenology climate change ecological justice Marxism and critical theory His novel perspective shows that different environmental concerns both anthropocentric and nonanthropocentric can dovetail rather than compete with each other and that our alienation from nature need not be something to be regretted or overcome His book will interest a broad readership in environmental philosophy and ethics political philosophy geography and environmental studies **The Child as Thinker** Sara Meadows, 2006 After a brief discussion of the nature and subject of cognition Sara Meadows reviews children s thinking in detail She discusses the ways children remember and organise information in general the acquisition of skills such as reading writing and arithmetic and the development of more complex reasoning as children grow to maturity As well as studies that typically describe a generalised child the book also reviews some of the main areas relevant to individual differences in normal cognitive development and critically examines three major models of cognitive development In outlining the work of Piaget information processing accounts and neo Vygotskian theories she also evaluates their different explanations of cognitive development and their implications for education Finally the book examines biological and social factors that may be involved in normal and suboptimal cognitive development **The New Celebrity Scientists** Declan Fahy, 2015-03-06 A new cultural icon strode the world stage at the turn of the twenty first century the celebrity scientist as comfortable in Vanity Fair and Vogue as Smithsonian Declan Fahy profiles eight of these eloquent controversial and compelling sellers of science to investigate how they achieved celebrity in the United States and internationally and explores how their ideas influence our understanding of the world Fahy traces the career trajectories of Richard Dawkins Stephen Hawking Steven Pinker Neil deGrasse Tyson Brian Greene Stephen Jay Gould Susan Greenfield and James Lovelock He demonstrates how each scientist embraced the power of promotion and popularization to stimulate thinking impact policy influence research drive controversies and mobilize social movements He also considers critical claims that they speak beyond their expertise and for personal gain The result is a fascinating look into how celebrity scientists help determine what it means to be human the nature of reality and how to prepare for society s uncertain future **Narrative Comprehension** Catherine Emmott, 1997 Despite the current explosion of interest in cognitive linguistics there has so far been relatively little research by cognitive linguists on narrative comprehension Emmott draws on insights from discourse analysis and artificial intelligence to present

a detailed model of how readers build maintain and use mental representations of fictional contexts and how they keep track of characters and contexts within a complex changing fictional world The work has implications for linguistic theory since it questions several long held assumptions about anaphora arguing for a levels of consciousness model for the processing of referring expressions The book begins with a summary of current issues in text processing theory and a discussion of the methodological importance of recognizing the hierarchical structure of discourse The core of the book explores the significance of contextual monitoring in narrative comprehension and looks particularly at the cognitive demands placed on readers by flashbacks Later chapters examine the implications of contextual monitoring for reference theory and for a literary linguistic model of narrative text types The study focuses on anaphoric pronouns in narratives assessing the accumulated knowledge required for readers to interpret these key grammatical items

The Philosopher's Habitat

Laurence Goldstein,2023-02-14 First published in 1990 The Philosopher s Habitat introduces the subject by investigating a variety of the problems which are currently engaging philosophers and which can be made intelligible to an absolute beginner Rather than introducing philosophy by examining in the traditional way the writings of great philosophers the author has inverted this procedure The idea is that the reader will become absorbed in these dramas will thereby come to appreciate the ways in which the stage was set by the great writers of the past and will feel the urge to participate Questions at the end of each chapter encourage the reader to push beyond the text This book is a must read for students of philosophy

Individuals Across the Sciences Alexandre Guay,Thomas Pradeu,2016 Knowing what individuals are and how they can be identified is a crucial question for both philosophers and scientists This volume explores how different sciences handle the issue of understanding individuality and reflects back on how this scientific work relates to metaphysics itself

Biolinguistics and Philosophy: Insights and Obstacles Elliot Murphy,2012-11-09 This study explores the current stage of generative linguistics the Minimalist Program and examines its philosophical implications tracing the basic themes back to the seventeenth century scientific revolutions and the nineteenth century biological tradition of formalism Expositions of the philosophy of biolinguistics have previously been few and short and exploring the insights of recent theoretical linguists and neurobiologists can shed some much needed light on the problems posed by analytical philosophy such as traditional questions of reference and truth

Religion and Scientific Naturalism David Ray Griffin,2000-05-18 Articulates a metaphysical position capable of rendering both science and religious experience simultaneously and mutually intelligible

Religion and Science: The Basics Philip Clayton,2013-03 Intelligent Design vs the New Atheists

Experiencing Animal Minds Julie A. Smith,Robert W. Mitchell,2012-11-27 In these multidisciplinary essays academic scholars and animal experts explore the nature of animal minds and the methods humans conventionally and unconventionally use to understand them The collection features chapters by scholars working in psychology sociology history philosophy literary studies and art as well as chapters by and about people who live and work with animals including

the founder of a sanctuary for chickens a fur trapper a popular canine psychologist a horse trainer and an art photographer who captures everyday contact between humans and their animal companions Divided into five sections the collection first considers the ways that humans live with animals and the influence of cohabitation on their perceptions of animals minds It follows with an examination of anthropomorphism as both a guide and hindrance to mapping animal consciousness Chapters next examine the effects of embodiment on animals minds and the role of animal human interembodiment on humans understandings of animals minds Final sections identify historical representations of difference between human and animal consciousness and their relevance to pre established cultural attitudes as well as the ways that representations of animals minds target particular audiences and sometimes produce problematic outcomes The editors conclude with a discussion of the relationship between the book s chapters and two pressing themes the connection between human beliefs about animals minds and human ethical behavior and the challenges and conditions for knowing the minds of animals By inviting readers to compare and contrast multiple uncommon points of view this collection offers a unique encounter with the diverse perspectives and theories now shaping animal studies

The Problem Of The Soul Owen Flanagan,Owen J.

Flanagan,2003-06-25 A reconciliation of two conflicting visions of what a person is one embedded in our humanistic traditions the other advanced by mind science from one of the most influential philosophers of our time

Presenting the Past Jeffrey Prager,2009-06-01 Psychology is the dogma of our age psychotherapy is our means of self understanding and repressed memory is now a universally familiar form of trauma Jeffrey Prager who is both a sociologist and a psychoanalyst explores the degree to which we manifest the cliches of our culture in our most private recollections At the core of Presenting the Past is the dramatic and troubling case of a woman who during the course of her analysis began to recall scenes of her own childhood sexual abuse Later the patient came to believe that the trauma she remembered as a physical violation might have been an emotional violation and that she had composed a memory out of present and past relationships But what was accurate and true And what evidence could be persuasive and valuable Could the analyst trust either her convictions or his own Using this case and others Prager explores the nature of memory and its relation to the interpersonal therapeutic and cultural worlds in which remembering occurs Synthesizing research from social science psychoanalysis neuroscience and cognitive psychology Prager uses clinical examples to argue more generally that our memories are never simple records of events but constantly evolving constructions affected by contemporary culture as well as by our own private lives He demonstrates the need that sociology has for the insights of psychoanalysis and the need that psychoanalysis has for the insights of sociology

Animal Minds Donald R. Griffin,2024-05-31 In Animal Minds Donald R Griffin takes us on a guided tour of the recent explosion of scientific research on animal mentality Are animals consciously aware of anything or are they merely living machines incapable of conscious thoughts or emotional feelings How can we tell Such questions have long fascinated Griffin who has been a pioneer at the forefront of research in animal cognition for decades and is recognized

as one of the leading behavioral ecologists of the twentieth century With this new edition of his classic book which he has completely revised and updated Griffin moves beyond considerations of animal cognition to argue that scientists can and should investigate questions of animal consciousness Using examples from studies of species ranging from chimpanzees and dolphins to birds and honeybees he demonstrates how communication among animals can serve as a window into what animals think and feel just as human speech and nonverbal communication tell us most of what we know about the thoughts and feelings of other people Even when they don t communicate about it animals respond with sometimes surprising versatility to new situations for which neither their genes nor their previous experiences have prepared them and Griffin discusses what these behaviors can tell us about animal minds He also reviews the latest research in cognitive neuroscience which has revealed startling similarities in the neural mechanisms underlying brain functioning in both humans and other animals Finally in four chapters greatly expanded for this edition Griffin considers the latest scientific research on animal consciousness pro and con and explores its profound philosophical and ethical implications

National Library of Medicine Current Catalog National Library of Medicine (U.S.),1988 **Thinking Through Dementia** Julian C.

Hughes,2011-02-17 Dementia affects millions of people throughout the world Thinking Through Dementia offers a critique of the main models used to understand dementia It discusses clinical issues and cases together with philosophical work that might help us to better understand and treat this illness **Sonic Flux** Christoph Cox,2018-10-22 From Edison s invention of the phonograph through contemporary field recording and sound installation artists have become attracted to those domains against which music has always defined itself noise silence and environmental sound Christoph Cox argues that these developments in the sonic arts are not only aesthetically but also philosophically significant revealing sound to be a continuous material flow to which human expressions contribute but which precedes and exceeds those expressions Cox shows how over the course of the twentieth and twenty first centuries philosophers and sonic artists have explored this sonic flux Through the philosophical analysis of works by John Cage Maryanne Amacher Max Neuhaus Christian Marclay and many others Sonic Flux contributes to the development of a materialist metaphysics and poses a challenge to the prevailing positions in cultural theory proposing a realist and materialist aesthetics able to account not only for sonic art but for artistic production in general

The Metaphoric Process Gemma Corradi Fiumara,2005-08-16 Metaphor is much more than just a linguistic phenomena argues Gemma Corradi Fiumara it is in fact the key process by which we construct and develop our ability to understand the world and the people we share it with Rationality as understood by philosophers has led to a disembodied view of ourselves in which interaction between life and language has been downplayed By looking at the metaphoric process in an interpersonal rather than a formal way its importance in allowing us access to new worlds of experience is revealed The metaphoric potential in us all exposes us to the world and initiates our involvement in it *The Evolution of Communication* Marc D. Hauser,1996 This text addresses the problem of how communication systems including

language have been designed over the course of evolution It integrates conceptual issues and empirical results from neurobiology cognitive and developmental psychology linguistics evolutionary biology and ethology **Neuroscience for Teachers** Richard Churches,Eleanor Dommatt,Ian Devonshire,2017-09-18 Foreword by Baroness Susan Greenfield CBE In Neuroscience for Teachers Applying Research Evidence from Brain Science Richard Churches Eleanor Dommatt and Ian Devonshire expertly unpack in an easy to read and instantly useable way what every teacher needs to know about the brain and how we really learn and what that suggests for how they should teach Everyone is curious about the brain including your learners Not only can knowing more about the brain be a powerful way to understand what happens when your pupils and of course you pick up new knowledge and skills but it can also offer a theoretical basis for established or new classroom practice And as the field of neuroscience uncovers more of nature s secrets about the way we learn and further augments what we already know about effective teaching this book advocates more efficient pedagogies rooted in a better understanding and application of neuroscience in education By surveying a wide range of evidence in specific areas such as metacognition memory mood and motivation the teenage brain and how to cater for individual differences Neuroscience for Teachers shares relevant up to date information to provide a suitable bridge for teachers to transfer the untapped potential of neuroscientific findings into practical classroom approaches The key issues challenges and research are explained in clear language that doesn t assume a prior level of knowledge on the topic that would otherwise make it inaccessible therefore enabling more teachers to better comprehend the lessons from neuroscience while the authors also take care to expose the ways in which neuromyths can arise in education in order to help them avoid these pitfalls Laid out in an easy to use format each chapter features Research Zones highlighting particular pieces of research with a supplementary insight into the area being explored Reflection sections that give you something to think about or suggest something you might try out in the classroom and concluding Next steps that outline how teachers might incorporate the findings into their own practice The authors have also included a glossary of terms covering the book s technical vocabulary to aid the development of teachers literacy in the field of neuroscience Packed with examples and research informed tips on how to enhance personal effectiveness and improve classroom delivery Neuroscience for Teachers provides accessible practical guidance supported by the latest research evidence on the things that will help your learners to learn better Suitable for LSAs NQTs teachers middle leaders local authority advisers and anyone working with learners
