Pendharkar, 2003-01-01 Portals present unique strategic challenges in the academic environment Their conceptualization and design requires the input of campus constituents who seldom interact and whose interests are often opposite The implementation of a portal requires a coordination of applications and databases controlled by different campus units at a level that may never before have been attempted at the institution Building a portal is as much about constructing intra campus bridges as it is about user interfaces and content Designing Portals Opportunities and Challenges discusses the current status of portals in higher education by providing insight into the role portals play in an institution s business and educational strategy by taking the reader through the processes of conceptualization design and implementation of the portals in different stages of development at major universities and by offering insight from three producers of portal software systems in use at institutions of higher learning and elsewhere Data Mining John Wang, 2003-01-01 Data Mining Opportunities and

Challenges presents an overview of the state of the art approaches in this new and multidisciplinary field of data mining The primary objective of this book is to explore the myriad issues regarding data mining specifically focusing on those areas that explore new methodologies or examine case studies This book contains numerous chapters written by an international team of forty four experts representing leading scientists and talented young scholars from seven different countries *Laws of*

It distills the body of knowledge that characterizes mining engineering as a disciplinary field and has subsequently helped to inspire and inform generations of mining professionals. Virtually all of the information is original content representing the latest information from more than 250 internationally recognized mining industry experts. Within the handbook's 115 thought-provoking chapters are current topics relevant to today's mining professional: Analyzing how the mining and minerals industry will develop over the medium and long term; why such changes are inevitable; what this will mean in terms of challenges and how they could be managed; Explaining the mechanics associated with the multifaceted world of mine and mineral economics; from the decisions associated with how best to finance a single piece of high-value equipment to the long-term cash flow issues associated with mine planning at a mature operation; Describing the recent and ongoing technical initiatives and engineering developments in relation to robotics, automation, acid rock drainage, block caving, optimization, or process dewatering methods; Examining in detail the methods and equipment available to achieve efficient, predictable, and safe rock breaking; whether employing a tunnel boring machine for development work; mineral extraction using a mobile miner or cast blasting at a surface coal operation; Identifying the salient points that dictate which is the safest, most efficient, and most versatile extraction method to employ, as well as describing in detail how each alternative is engineered; Discussing the impacts that social and environmental issues have on mining from the pre-exploration phase to end-of-mine issues and beyond; and how to manage these two increasingly important factors to the benefit of both the mining companies and other stakeholders. *International Mining Forum 2006, New Technological Solutions in Underground Mining* Eugeniusz Sobczyk, Jerzy Kicki, 2006-04-13 The International Mining Forum is a recurring event hosted by the University of Science and Technology in Cracow, Poland, bringing together an international group of scientists including those working in rock mechanics and computer engineering, as well as mining engineers.
